general office at Chicago.

SOCIETY OF AMERICAN FLORISTS.

FOURTH ANNUAL MEETING

—AT—

New York, August 21, 22, 23, 1888.

E. G. Hill, president; John N. May, vice president; M. A. Hunt, treasurer; Wm. J. Stewart, secretary.

THE MEETING

Will be held in

COOPER UNION,

At the junction of Third Ave., Fourth Ave., and
Eighth Street, and the

EXHIBITION IN NILSSON HALL,

Fifteenth Street, between Third and Fourth
Aves. See map in Convention Supplement.

Railroad Rates to the Meeting.

The Eastern Traffic Association, or more properly the Trunk Line Association, having refused permission to the various trunk lines to make a reduced rate for the New York meeting, those in Trunk Line territory will have to secure the best rate they can from individual roads, scalpers, etc., or pay full rates. The Trunk Line territory extends west to Pittsburg and Buffalo.

The Central Traffic Association has made a rate of one fare for the round trip in its territory, which extends east to Pittsburg or Buffalo, and the rate will be good only to those points. From there on full fare will have to be paid. To secure this rate tickets must be purchased August 19 or 20, and will be good only on day of sale, as stamped on back by selling agent. Returning they will be good on trains leaving western termini of trunk lines—namely Buffalo, Pittsburg or other cities on line dividing Trunk Line and Central Traffic Association territory—not later than August 25. These tickets will be round trip special excursion tickets and certificates will not be necessary. The remarkably short limit placed on these tickets render them of but little value to those who wish to remain in New York more than one day after the meeting adjourns, August 23.

The Chicago club has succeeded in securing a special round trip rate of \$27.75 from Chicago to New York via Niagara

Falls, and will undoubtedly go by that route. The special train will leave Chicago at 3 p. m. Sunday, August 19, reaching Niagara Falls at 8 o'clock the following morning. The train will lay at the falls until 2 p. m., thus giving all an abundance of time to take in the sights at this famous resort. Leaving the falls at 2 p. m. the train will arrive at New York at 7 o'clock the following morning, Tuesday August 21. A dining car will be attached to the train at Chicago and dinner will be served on the train at 5:30 p. m. Breakfast and lunch may be had at Niagara Falls and 6 o'clock dinner on the train. These tickets will be on sale at the office of the AMERICAN FLORIST, 54 La Salle street, Saturday, August 18, and Sunday, August 19, from 11 a. m. till 2:30 p. m. The train starts at 3 p. m. from the Dearborn station, on Polk street, foot of Dearborn street. The limit on these tickets will be arranged to suit all. The sleeping car diagrams will be at this office after August 14 where berths may be secured. Parties from other points who expect to join the Chicago club may have berths reserved for them by addressing this office. The extra charge for sleeper will be \$5 each way. This may be reduced some by chartering the cars at \$105 a car and dividing the amount pro rata among the occupants. If the number going will warrant it this will be done. Unfortunately no special rate could be secured from points east of Chicago even by this route, but all located west of Chicago would do well to come to that city and go with the Chicago club, as above rate is lower than can be secured by any other route, in addition to allowing a longer time to those who wish to make a stay east after the meeting adjourns. Those west of Chicago can use the rate of one and one third fares on the certificate plan to Chicago, granted by the Western Traffic Association. This rate is good on all the western roads worth traveling on. Certificates may be secured from the ticket agent at time of purchasing ticket.

Convention Notes.

Space in the exhibition hall is in great demand. Every foot will be occupied. A general discussion will follow each essay, and members are cordially invited to take part. Specialists in any subject under discussion are particularly requested to express their views. All members taking part in such debates will be limited to five minutes each.

State vice presidents will be provided with distinguishing badges, marked with the name of their respective states, and strangers desirous of meeting particular members will most readily accomplish their object by applying to the vice presidents of states where such members be-

long. State vice presidents are expected to keep a list of the delegates from their respective states, with hotel at which each is stopping, and to keep their delegations together as much as possible.

New England Delegates.

Delegates desirous of going to the convention via Boston are notified that the Boston party will leave via Fall River Line at 7 p. m. Monday, August 20. A meeting of all those who propose to go at that time will be held at the office of Wm. J. Stewart, 67 Bromfield street, on Saturday evening, August 18, at 7:30, and all who wish to have state rooms reserved for them must notify Benj. Grey, Malden, Mass., previous to that meeting. A special car will be provided for the delegation with a supper on board the boat, and all who can make it convenient will find it most agreeable to go with the party.

Exhibition Notes.

The New York club will offer premiums as follows:

- Best original floral design. . . . \$50.
- Best funeral design. . . . \$50.
- Best dinner table decoration. . . \$50.
- Best bridal bouquet. . . . \$25.

In addition to the above premiums certificates of merit will be awarded by a committee of the S. A. F. to any other designs or exhibit which may be considered worthy of the distinction. It is hoped that the liberal premiums for cut flower work will induce a lively competition. Designs may be entered "not for competition" if desired. Diplomas and certificates will also be awarded for plants.

Work for the National Society.

At the Philadelphia meeting of the S. A. F. Mr. Halliday made an effort to have a standing committee on nomenclature appointed. Each one of the executive committee agreed that it would be a good stroke of business, but they could not have fully appreciated it for the reason that their time was spent on other matters, some of which I feel were of far less value. As one thinks the matter over many instances occur to mind in which the work of such a committee would be of much benefit, not only to the gardener and florist, but to the public and the society itself as an organization. This committee should be composed of a few of our very best and most careful men. Men who know a fern from a palm, a lily from a richardia, etc.

As I understand it this committee would be required to pass judgment on all plants now being catalogued, giving description, classify them and give each a name. After the work is complete on all plants now in use, we would look for

reports annually on all new introductions. This would work a great benefit besides preventing considerable loss. If I should see quoted in a catalogue a yellow verbenas at \$5 each I must now look to see whose catalogue it is. If it be one of the very few reliable firms which possess my confidence, off goes the \$5, all well and good, but this country now is too large for me to attempt to make the acquaintance of all growers and learn who are to be trusted and who not. The character of a plant is not so difficult to judge. If this party be some one unknown to me I would be apt to say \$5 is worth more to me than a plant I know nothing about, or I may jump at it and get a dirty white verbenas and \$5 worth of experience. This is not an uncommon predicament to find oneself in, and it injures the whole trade. In the first place if the verbenas is really yellow and I do not purchase it for fear of being swindled, the introducer is at a loss and I am deprived of the benefits such a plant would be to me. On the other hand if both plant and introducer are humbugs and I do purchase, I lose \$5 and give it towards the support of a scoundrel that he may live the longer to swindle some one else. If this man, although unknown to me, refers in his advertisement to his certificate given by the S. A. F., I need but to refer to my printed report of the society proceedings and there find it O. K. This would add very much to the value of our annual publication and would help very much to increase the society's membership.

This committee could also change some names of plants and settle some points of difference. Their rulings might not be accepted all over the globe, but there would be very few in the United States who would undertake to discredit the society's rulings in such matters.

If one of your customers orders a "Day Lily" to-morrow, what will you send, a funkia or hemerocallis? Does it not look rather queer to receive an order for a white scarlet geranium? In the August number of *Popular Gardening* I notice a "rose colored white nymphaea." I suppose if a florist wished to have his glass covered with a red wash in place of white he would say put on a red whitewash.

Milwaukee, Wis.

C. B. W.

La Belle France.

Paris Letter.

Probably the most noteworthy features of the florist business, to the American visitor, at the beautiful capital, are her markets; which are held twice each week at three different places, making really a daily market.

One is devoted mainly to plants, the other two to both plants and flowers. Two generally last the whole day while at the other most stock is closed out by the middle of the forenoon. Wholesale growers of plants leave home at about 7 P. M. or in time to reach the market by 9 or 10 P. M. and their trading lasts until about 7 in the morning, making a full night of it, usually twice a week. I am told the French florists are the hardest workers on the continent, and that the Paris greenhouse workmen receives 30 to 40 per cent. better pay than in other parts of France, say about \$35 per month and lodging.

Bouquets, pot plants and large bunches of cut flowers offered at retail in Paris are almost invariably covered with white paper which leaves nothing exposed but the top of the plant or bouquet, covering

the dirty pots and stems, wrapping it for delivery, but the effect is rather odd.

In former years yellow and black immortelle wreaths were much used for funeral purposes but within two or three years those of glass and porcelain have superseded the immortelles. They are largely made of purple and black but white is also used. I saw two cemeteries in the suburbs in which these had been so freely used that the whole general appearance of the plot at a distance was a purplish black. Of course these of glass beads as well as the porcelain retain their appearance for years. I should judge that the business done in the Paris shops in this class of stock is as large as that in fresh flowers. I fear the cut flower growers have no love for it.

The best retail flower stores are well kept in Paris. Handsomely fitted up and decorated with handsome vases, mirrors palms, ferns etc. They sell very handsome large baskets filled with polyantha roses in bloom in pots set in green moss, at from \$6 to \$10 each. As high as \$5000 per year rental is paid. Here as in London cut blooms of orchids have a large sale in the best places. Of plants not much used with us I noticed pot grown dahlias, and *Calceolaria rugosa*. At the unveiling of the Gambetta monument July 13 there were a large number of decorations of which perhaps half were of fresh flowers, large wreaths five to seven feet across but in very poor style; other wreaths and favors were made with bronzed metal leaves (laurel shaped) of glass, of porcelain and of yellow immortelles. Fine grasses are used with bouquet and basket work and sometimes with very good effect. Here as well as in London several kinds of the best grasses are sold in quantity in the wholesale markets, they are but slightly dried.

Lyon has reason to be proud of her horticultural record; she claims the address of many who have made their mark. Lacharme, Sisley, Guillot, Pernet, Crozy, Hoste, Carle, Levet and many others have by years of careful study on a single class placed their productions at the head of the horticultural world. I spent three very interesting though rainy days in looking at the collections and novelties in roses, dahlias, gladiolus, carnations and seed trials; also in Golden Head Park. Messrs. Lille and Bene are doing very careful work in seed trials and the park and Botanical Gardens are very complete; a feature is a palm house sixty feet high. Here I saw a remarkably complete collection of geraniums and coleus in charge of Mr. Jules Christien, and of palms and orchids in the care of Mr. F. Gaulain and the Botanical Gardens were very complete in collections of clematis and roses as well as all plants less known to commerce. The coat of arms of the city of Lyon—a rampant griffon on a red alternately ground with a border of black coleus and golden feverfew reminded me of home where conversation is easier than through the broken German which I talk to an interpreter to translate into French.

J. C. V.

The Heating Question.

Mr. James D. Reynolds, Riverside, Ill., has undertaken to prepare a paper for the coming meeting of the S. A. F. at New York on "Modes of Heating. Their relative cost of construction and operation," with the object of aiding those who are building or enlarging greenhouses in deciding upon the best system of heating.

As the best possible guide must be the experience of others he requests replies to the following questions:

1. What system of heating do you use?
2. How many square feet of glass (counting roofs, sides and ends, when glazed) do you heat by this system?
3. At what average temperature do you keep your houses during the firing season?
4. State make, size and cost of boiler.
5. If you use steam or water under pressure, state what pressure you run at.
6. What is the total length of piping for distributing, flow and return, and what kind and sized pipe is it?
7. What was the total cost of heating apparatus, including boiler, pipe, boiler-pit and labor of fitting?
8. How low is the floor of your boiler-pit below the floor of house?
9. What kind of coal, at what price, delivered, and how many tons do you use in one season?
10. Give an approximate estimate of the cost per season of labor employed exclusively in firing and looking after the heating apparatus?

It is understood that all the above questions apply only to so much of your establishment as is heated on one and the same system. Necessarily the experience of one who has tried more than one system, under similar conditions, must be of greatly increased value, hence if two parts of your houses are heated by different systems, or if you have used water and are now using steam (or vice versa), you will confer a very great favor by answering the above list of questions separately, for each system, and also stating which system you prefer, and in what its main advantage consists.

We hope that all will take time to answer above questions, as the deductions to be drawn from a large number of answers from all sections can not but be of great value, and they will be published for the benefit of the whole trade. Mail your answers at once to Mr. James D. Reynolds, Riverside, Cook county, Ill.

The Victoria Regia.

So much has been written from time to time about this truly magnificent aquatic that to some the subject may have a "chestnutty" ring about it, still I think it may interest some readers of the AMERICAN FLORIST to know that the Victoria Regia has been successfully grown and flowered at "Sandyside," Yarmouth Port, Mass., the residence of Mrs. John Simpkins. That this has been done in the open air, or nearly so, will be of additional interest perhaps, as showing that with a little extra care and attention this queen of lilies can be flowered as far north as Massachusetts.

The plant in question was raised from a seed sown under glass January 13, 1888. Until the seed germinated (which was about February 1), the temperature of the water was kept steadily at 90°, after that time a uniform temperature of 85° was maintained. By May 5 the plant had made rapid progress, having leaves at that time four feet in diameter. It was then decided that the plant should be placed in its summer quarters—a large pond thirty feet wide and two and one half feet deep, artificially heated from the greenhouse. Good rich soil to a depth of twelve inches was wheeled in and the plant carefully planted in the center, care being taken to first well warm both soil and water.

As the mean temperature of the month of May in this latitude is much too low for any plant of a tropical nature, some protection for this lily was necessary for the first few weeks, this was given in the shape of a thin cotton cloth rolled down over the pond, the framework to support the cloth consisting of stout galvanized iron wires stretched from side to side.

By heating the water in the pond to 90° sufficient heat was thrown off to well warm the volume of air under the cloth, and no difficulty was experienced in maintaining a temperature of 65° or 70°, when much lower than either of those

VICTORIA REGIA BLOOMING OUT OF DOORS AT "SANDYSIDE," YARMOUTH PORT, MASS

figures outside. Since warm weather set in we have dispensed with the cloth except on windy days, which, by the way, are very numerous on Cape Cod, and are by far the worst enemy we have to contend with in growing the *Victoria Regia*.

When once established in its new quarters the leaves rapidly increased in size until they reached a diameter of six feet, and June 17, five months and four days after sowing the seed, the first flower opened. From that date until the present time, July 9, it has flowered every third or fourth night. The flowers are from ten to twelve inches in diameter and of a beautiful creamy white color the first night, while opening on the afternoon of the second day they rapidly change to a deep pink and soon start on their downward journey to the bottom of the pond.

Since flowering no increase in size of leaf has been observed, rather otherwise, still considerable gain is made in the size of the plant, which is now twenty-three feet in diameter and still increasing.

The accompanying illustration is from a photograph of the pond taken June 21, which shows a little boy 3 years old seated on the leaf, his weight making little or no impression on it.

While we had some success last year in our first attempt at growing the *Vic-*

toria Regia outside, having obtained two or three flowers, this year promises much better results, and bids fair to give us three clear months of continuous flowering.

JAMES BRYDON.

Berlin Markets.

The former manner of using the public squares of the town as markets, with such displays of vegetables, flowers, fish and meat as the day would have to offer, has been discarded for the past two years by the municipality, which has provided public halls where farmers and venders had to confine their activity under the supervision of the police, who collect the market dues, keep order and inspect the soundness of all goods offered to the public. Although the halls are elaborate in architecture and built with a view to accommodate many, the Berliners do not favor the new order of things, and venders especially consider their former accommodations in the open air as preferable to present regulations, in fact not a few are outspoken that the new order of things is a failure. The public at large however is glad to see these marauders on public comfort confined to their stalls and are ready to provide for additional market facilities if such should

prove to be required, of which they are to be convinced as yet.

Thus far they say the Central Market supplies facilities for the wholesale business and the seven additional halls scattered through the town afford plenty of room for retailing, especially as the Central market is given to retail business after 9 o'clock in the morning. Wholesale business being transacted from 2 a. m. to 8 a. m. What is left unsold by that time in a wholesale way is turned over to the different auctioneers (six in number, who divide into the diverse line of goods such as eggs, butter and cheese, foreign fruits, fish, lobsters, etc., game and poultry, meats, vegetables and flowers, each one serving in this or the other line) and the remnants are sold at prices which determine for the rest of the day the value of goods sold at private sale for lots to come the following morning. Although auction prices as a rule would be inferior, still the hotel keepers and restaurant owners flock to these auctions expecting to buy there for less money. However they bid each other up and thereby the results are not detrimental to the market interests.

The auction business is carried on more sedately than in the United States. When the auctions commence the respective auctioneers ring the bell to call

the buyers together who are informed already by a blackboard at what hour certain lots are to be offered, and the fun starts. The auctioneer has a clerk with powerful lungs who describes the goods which are shown on a counter behind iron bars, in front of which the buyers congregate, and to facilitate the inspection of merchandise a platform with three steps is built, enabling the rear man to look over the head of the individual in front of him. Then the bidding is started, which is quite active and announced in sonorous voice how it stands but once, until it slackens, when two or three times the bid is repeated until the "gone" is announced by a loud hit with a rattan on the counter. The buyer gets his note of sale immediately after the purchase from the auctioneer who then proceeds with the next lot, whilst the purchaser enforces his bargain by paying out the funds at the cashier's office and turns his order for delivery over to his own servant or a public porter, who has to remove the goods at once. This way, though in a small space, a quick and prompt business can be done without much confusion and absolutely no pilfering from the part of the public. As auctioneer No. 1 is done No. 2 rings his bell and by 9 o'clock the wholesale lots are disposed of and retailing is the order of the day till 2 o'clock, when the halls are closed till five. Then they resume business till 8 p. m., when all retailing must stop.

The Central Market is a building covered with a roof, fully the size of the New York Central Railroad depot, only not with a span roof, but with an ordinary flat roof admitting the light from the four sides in the top structure. Iron columns support the roof. The hall is divided into four grand partitions by three balcony walks extending the entire length of the building, and a balcony walk (or gallery) running all around the building, same as we find it in most churches. These balconies are used for the sale of general goods and are divided into stalls, so that from a broom to a foot stool, from a pin to a carving knife, etc., can be found on sale if the "corridors"—as these balcony walks are called—are visited. The sight from above on the market below is truly grand and imposing, as the flowers are generally sold from the balconies an observer is at once pleasantly surrounded.

Thus far the description has to be applied to Central Market only, where the combined wholesale and retail markets are carried on, because the railroad station enables goods to be carted immediately into the market. The other market halls are less grand in structure but probably more elaborate in architecture. The system of an opened fan seems to have been observed in erecting these buildings which face different streets so as to be accessible from many sides and still offering as much stall room as possible. These side markets open business at 5 a. m., confining their activity to retail business only. It is to one of these the flower market has taken its wings to evade the auction sales which the rules of Central Market insist upon. Possibly to this very reason may be attributed the failure of the Berlin flower market, which, if it looked for healthy competition, might be as thriving as the bustle in other goods indicates the Central Market to be. They complain that Central Market is too small and that ten times its size would hardly be adequate to the wants of a Berlin wholesale market; also that retailing should be carried

on in stores in town entirely, whilst the eight market halls should be given entirely up to the wholesale business, with a branch in each of the eight buildings.

In the Linden Market the combination of Messrs. Chouc, Lackner and Schnitz have rented from the municipality a space partitioned off in glass and heated by warm water pipes, which probably is 50 x 100 feet, where they and any who apply for space to them can show off plants and keep them on sale, at a cost of 45 pfennigs per square meter, or about 10 cents per day per square yard in

FLORAL BANNER.

American money. The place is filled with palms, decorative plants and garden stuff, but it seems to be idle, at least very little business is going on there. The summer season is not to be blamed for it since the florists' booths outside this reserved space are busy. The rental of said wholesale flower hall is only 18,000 marks, or about \$4,500 a year, therefore not unreasonable. The management of it is however more or less discouraged. "I have sent \$500 worth of palms there," said one, "to see them spoil on my hands. I have carted \$500 worth of plants there and took them back with about 25 cents sales, after spending there my time from 5 a. m. to 2 p. m. I am disgusted; the idea seems to be premature." Another said: "Well we have to wait, the seed is sown, now we must await the germinating. My children may reap the benefit, I despair of seeing it, but did not Covent Garden meet with the same experience? Look at it now. No reason why our enterprise should not flourish in the course of years." The question put to a florist stall keeper, "Why don't you join the flower hall over there?" was answered: "Oh, they retail and I can make more right here than if I am locked up in that hall. There is more passage here and people have it handier." "Where do you get your cut flowers then? Will they sell you any if you run short?" was answered: "Cut flowers are handled here entirely by middlemen. They go to

the nurseries where they buy outright and pay cash for what they cut, then these men come to us and sell us with a moderate profit. They also furnish the stores in town and the very men you see occupy yonder hall will be only too glad to sell to these middlemen and take their money in preference to lugging their stuff into the flower hall. There are of course a few cut flowers now in that hall but you can go there and buy any quantity as cheap as I could. Why then should I patronize them? Yes, if they would confine their efforts to dealing with the trade only and have their shingle out as wholesalers only who refuse to retail, I and many others would willingly club together and fill a market building which would be bigger than this whole market hall of the municipality and all of us would do prosperous business and could afford to centralize the flower interests. As it is I believe they never will succeed. Why should I pay them any more than I pay to the town? Heated rooms? I don't need them, it is warm enough out here for my wants. Give me length of counter room and I am all right, but just turn around here and look at this 8 x 8 feet stall, I do not need this depth, it is all waste, I can not make a show of any account. Oh these market authorities they have to learn yet a great deal before they will get us reconciled to the new system."

Similar information was gathered at the other florist stalls and now I leave to the reader this subject, who contemplates to do something for his native town in the way of a flower market, to learn what not to do, for experience here tells a story which illustrates how practical workings must differ from theoretical problems. For this Berlin market system when inaugurated was intended to be an improvement over the Halles Centrales in Paris, which had been studied, but, which I have not as yet had the opportunity to examine myself.

A. R.

Floral Banner.

The accompanying sketch represents the famous Labarum or banner borne at the head of the Roman army during the reign of the emperor Constantine, when on his way to attack Maxentius. It is designed to commemorate the miraculous vision in the sky, which is said to have appeared to Constantine, and was the moving cause of his conversion to christianity.

The height of the design was over six feet. On the banner is the Greek initials of the word Christ in scarlet and pale yellow. The crown is bright orange, and is in imitation of the golden crown that was set with precious stones and enclosed the mysterious monogram. The cross at the top of pure white is designed to represent the flaming cross which appeared in the heavens with the inscription "In hoc signo vinces" thereon.

It was designed and made for the Episcopal church at Havana, Ills., by H. A. Collins of that city.

New York Notes and Comments.

It is quite probable that a large private flower show will be held in the autumn in addition to the Horticultural Society's chrysanthemum show. The private show in question will consist of rare and curious plants and flowers, instead of chrysanthemums. A well-advertised novelty in this line usually attracts. People who care but little for flowers as a rule will go to see a peristeria, or giant water lily,

WEDDING BASKET.

just as a matter of curiosity. Probably the most successful chrysanthemum show held in New York was during the Mikado craze, when the Japanese mania advertised the flowers. There is every prospect that the display at the convention will be very fine; it is certainly the best opportunity to introduce novelties or show meritorious culture. And a certificate from the national society ought to be a guarantee of value.

Some of the agricultural authorities are discussing the question of patenting new varieties of plants. It often does seem that the raiser gets little credit and much vexation through the lack of some such protection. But how far a patent would protect is an open question; it is often an uncertain matter with mechanical appliances, and it might be still more uncertain with plants.

Some new houses recently visited have the rafters 7 feet 6 inches apart, sash bars but 1 3/4 inches, the idea being to secure as much light as possible. Strength is secured by a slender iron rod running lengthwise, and iron stays at the angles of the roof. The ideal rose house must give plenty of light, especially during such dull winters as we have had for some seasons past.

Rather a novel greenhouse seen recently was a second floor built over the potting shed, with movable benches which could be raised or lowered. The idea of its construction was that of using it to bring on young stuff rapidly in the winter, or blooming pot hybrids.

Mr. Monahan, lately with Mr. Slaughter, of Madison, has started in business for himself at that place. He will go in chiefly for roses.

Mr. T. H. Spaulding, president of the New York Horticultural Society, now issues a catalogue of his chrysanthemums. He is an enthusiastic grower of these plants, and has raised many good seedlings. But it is a little difficult for one making up a list of the trade to decide between amateurs and professionals. Very small is the list of amateur growers in this country who do not try to make

their hobby support itself. One case in point is that of a millionaire, who, by the way, doesn't care a rap for flowers himself, but has a few houses merely because most men in his position do. He built a few new houses on the express condition that they paid for themselves, and then the gardener planted roses and marketed them until he made these expenses. Somehow it seems as if a woman who tires herself out in the garden merely because she loves flowers does more for the benefit of horticulture than the commercially inclined millionaire.

A special meeting of the executive committee of the Florists' Club was held on August 3, to make further arrangements for the August exhibition. They still had a lot of work before them. At the regular meeting of the club August 8, final arrangements were made. Every effort will be made to prevent any "hitch" in the proceedings, but it is a matter calling for much work and consideration.

It is a matter for regret that several of the florists' clubs are reported in a somewhat languishing condition. We hear this of Cleveland and Rochester; and now we are told that the Detroit club is rather debilitated. It is to be hoped that the national meeting will act as a universal reviver. Lack of interest or poor business management is usually responsible in such cases.

The decorative plants grown on tropical plantations are to be brought here and established indoors, the idea being to get at least a year's start in growing them. According to present appearances they are not so shapely when they come from the plantation as when grown inside, but three months inside improves their appearance wonderfully. Some raphis under this treatment looked very nice, so did the perpetually-useful lantana. It is the idea of the importers either to grow the plants on in their own houses, or to sell consignments right from the vessel, so that buyers may start them on to suit. *Ficus elastica* is not a success as an importation; it does not bear the transit well.

Some of our growers complain bitterly of the large nurserymen abroad. They say, with some reason, too, that a large amateur buyer is always better treated than a professional; also, that they buy cheap stuff from the continental growers and send it out as their own. They do not pack as well as our nurserymen either; their boxes look as if they were built out of doors, and they appear to think that Americans want the whole earth, judging from the generous amount of soil they throw in. All this increases the expense largely, and causes much dissatisfaction. We must remark in confidence, however, that foreign growers are not the only ones reported to treat amateurs better than professionals.

There is a general housecleaning going on now at all the establishments near New York, and an unwonted lavishness is displayed in flower beds and baskets. Evidently the coming convention is encouraging a love for flowers in professional ranks, and it is to be hoped it will do as much outside of the business.

EMILY LOUISE TAPLIN.

Wedding Basket.

This souvenir to present to brides is a very elegant design. It is a square basket with a high square handle, crossed at the corners. The handle is covered with satin ribbon and has a corner sash. Around the edge of the basket is a band of water lilies, with a fringing of smilax falling from underneath them. Moss roses and buds of both pink and white compose the rest of the filling. The floral combination is simple, but superb. The basket illustrated was arranged by Burnham, of New York.

An American Climbing Hydrangea.

[*Decumaria barbara*.]

The climbing hydrangea illustrated in the last issue of the *FLORIST* and described by Mr. Wm. Falconer, is a climber having much to recommend it and its merits should be better appreciated.

My object now is to call attention to a native variety. The description of the Japanese variety also accurately describes the American, except that the latter has an added virtue in a delicious odor. Its blooms are pure cream white in lace-like corymbs of large size.

Several years ago in a kindly and instructive letter from Prof. Thos. Meehan, he informed me of this very desirable climber being abundantly found in this portion of the United States and advised my searching for it in my rambles in the woods after botanical specimens. As soon as I read this letter I felt confident that I had seen it often, but was not acquainted with its name, and close alliance with the Japan variety. I mailed him specimen branches and was at once assured that I had found what he alluded to. I had to wait until the following year to see it again in flower. When I did I was greatly pleased with it under my new knowledge of its name. Believing that this variety is not generally known to be native to America, or its merits appreciated, I mailed specimens of both plant and flowers to several prominent botanists and florists hoping to introduce it to the notice of flower lovers.

The illustration in the *AMERICAN FLORIST* does not do justice to the specimens I find here, lacking age and consequently size. Here trees forty feet high from base to topmost boughs, are one luxuri-

ant mass of cumulative branches. The tree upon which it clammers having its identity almost hidden, and flowers in greatest abundance from base to top. When finding no further room to climb, it branches out in luxuriant masses. It is a wondrously beautiful sight these great forest trees so clothed. Both Mr. Manning and Mr. Murdoch, to whom I sent flowers, wrote me of the pleasing impression the flowers created. I also sent specimens to Dr. Asa Gray, to whom I am under many obligations for naming many botanical specimens, and who asked me to send a specimen for the Harvard Botanic Gardens, which I am sorry I failed to do, other pressing duties crowding it out of mind, now alas, as it is too late I regret my failure to do so.

MRS. J. S. R. THOMSON.

Spartanburg, S. C.

Cattleya Culture in the U. S

BY WM. MATHEWS.

By request of my correspondents I venture to give my experience in cattleya culture. I suppose it will be best to begin with the mode of starting the imported plants, which by all means should be collected in their season of rest, and should in every case have good sound dormant eyes, a condition it is very often difficult for importers to get them in. They should neither be heated or chilled in their voyage from their native home to the salesroom of importers, etc.

I have had good success on many occasions and on other occasions what I will call very bad luck, as I have had some lots that to all appearance looked very fine and healthy, but which I could not establish, and on the other hand I have had a shipment of plants that did not look over inviting that established readily. It is my opinion that plants which have been subject to excessive heat and close confinement, and plants that have been subjected to excessive cold are the ones that are hard to deal with. I think it very hard to recognize such a condition by ocular power. Take them home, pot them up, keep them a few days in a warm moist temperature, and you will soon realize their condition. To any one who intends to invest moderately as a beginning I conscientiously advise them to buy moderate priced, established plants, some that will bloom when the season comes round; he will then feel a satisfaction that he has something for his money and a quicker and better return than he will by buying imported plants with a risk of their growing, and then waiting a couple of seasons for them to bloom. I think perhaps the readers of this will think that I am not nearing the point in prefacing in this way my experience in the culture of cattleyas.

In the first place I will say that it is primarily necessary to give plenty of drainage, filling the pots (which should not be too large) three fourths full of clean broken pots, take the plants, if newly imported cut off all the decayed matter thoroughly, look out for scale, washing the leaves and bulbs thoroughly,

tie some neat stakes to each plant allowing the stakes to be long enough to touch the bottom of pot so that the base of the plant stands about three inches above the top of pot. There will (if a 6-inch pot) be left from the top of drainage to the base of plant four and a half inches to fill up. The best material I have found to keep cattleyas in good health is the roots of native ferns, thoroughly cleaned of all dirt and peaty substance by washing. Tear it up into shreds and with a potting stick of hard maple place the fern root as tightly and evenly as possible, from the crocking to the base of bulbs in a rounded form from top of pot, using at intervals of three or four inches a wad of good sphagnum tops, so that in a little time it will grow over the fern root, and give the plant a fine healthy appearance.

I find that cattleyas potted in this way can be watered in the summer time with the hose (provided the water is free from lime, which will leave a sediment on the leaves). The water I use is what is termed city water and comes from a reservoir two miles distant, about the same quality as ordinary cistern water and is generally warmer in all seasons than either cistern or well water. I use this water at all seasons, in the summer thoroughly drenching them leaf and root from 8 to 10 in the morning on very bright days, and from 2 to 4 in the afternoon. Use water freely under the benches, on the benches, between the pots and on the floor. All cattleyas from Mossie to Dowiana have this treatment. I am never troubled with insects of any kind; do not know that I have ever fumigated my cattleya house. About four times a year they are thoroughly cleaned by a small brush and sponge, using common soap and water with about a tablespoonful of aqua ammonia to a pint of soapy water.

My cattleya house is eighteen feet wide with paths dug out of the ground, consequently the side walls are only two feet above the surface of the ground, which I think keeps down the temperature much better than if elevated as in ordinary greenhouse structures. Ventilators all around the house nine inches above the surface and six feet apart, with sliding shutters 15x6 inches, are kept open at all times when the thermometer outside marks 50°. Ventilators at top in the roof, in summer weather are kept open day and night. Shading is done by brush, with naphtha and white lead in a light degree. From middle of April to October 1 the roof is covered by a shading made by cutting seven-eighths pine board into strips, using three-fourths inch square frames, onto which the strips are nailed. Each frame is made to fit the sash and can be taken off if necessary on short notice; this I find the best kind of shade, it reduces the temperature and at the same time gives sufficient light, which is very important in ripening the new growths, and setting buds for ensuing crop of flowers.

I prefer pot culture for the cattleya. Of course it is all right to have a few of them in cribs, baskets, hanging pots, etc. to hang up for effect, but my experience shows me that they grow very much faster and throw better flowers from pots. Do not over pot them, do not use any material that will become sour, allow no decaying matter in or around them, give plenty of pure fresh air, keeping down the temperature in summer season to as near 70° as you can in the day with 60° to 65° at night.

In repotting established plants, if the

pot is filled with roots do not hesitate to break the pot if it does not come out with one or two sharp taps on the rim of pot. Then repot, just using same material as for newly imported plants. Keep a little dry for a short time. The best time to repot is when the plant commences growth, which is at different times according to species.

I keep all classes in same house, giving Dowiana the warmest position and generally a little higher elevation, but I have some on benches and do not see any difference. Cattleya Skinneri and C. citrina may be grown at the coldest end; the latter I generally remove during their growing season, to a position in some house where a quantity of water can be used without injury to other plants.

As soon as the bulbs of cattleyas are finished and well ripened, gradually withhold water so as to preserve the roots which will also ripen up, take a rest, and will be ready to start when season of growth commences. With all the foregoing points carefully attended to there is very little trouble in growing cattleyas as they will be found eminently satisfactory for cut flowers and commercial use.

I think they have come to stay, not to rival any other flower, but to join socially (as all good flowers and florists should) with the charming rose, the stately camellia, the beautiful carnation and the lovely violet, to elevate, enlighten and aestheticise poor human nature; to feed the eye of those who have a love for the beautiful, to soften the asperities of every day life, to give food to the florist and gardener in whatever capacity he moves in.

Utica, N. Y.

[A view of Mr. Mathews' cattleya house appeared in last issue.]

Cost of Growing Geraniums.

In your issue of June 1, and in several subsequent numbers the question of cost of growing good plants of geraniums in 4-inch pots came up and I shall give you herewith my experience, which may not be far out of the way, as I have tried to find out, some years since, the actual cost of growing these plants and have kept a record from year to year, marking down work performed at different times and putting down at the same time the value of the work, etc., in a little notebook I carry. However I must say that I did not keep any account of cost of marketing or selling, for with me here all my plants are sold inside of about three weeks, at retail only, and it never occurred to me that I should put down anything under the head of cost of marketing.

I believe our prices this season have been fairly good, although there are some florists who are inclined to think we should get more for them, and others who sell at any price without thinking of cost of production. Our prices were from \$1.25 for bedding varieties to \$1.50 for newer and fancy varieties per dozen. I grow a limited quantity of the latter in 5-inch pots, which sell at a considerable higher figure when they have three or four good trusses of bloom on them, and have found it rather profitable. People who want a few extra large plants for urns or vases, or who can't wait for smaller plants to grow, will gladly pay the extra charge if they can be accommodated, but these larger plants can not be sold in quantity. I think I am the only one in town who makes a practice of growing these extra sized plants and it is done when repotting the whole crop into larger pots by

merely setting aside a few of the strongest and best plants of any of the most showy varieties, and instead of giving them a 4 inch pot, they are allowed a 5-inch one, all these are placed on a bench by themselves, and allowed a little more room. As to the prevailing cutting of rates all over the country, in my opinion there is no need for excessively low prices, for whoever buys plants for beds or borders will not buy an extra dozen simply because they are cheap; they need so many and no more to fill their beds, and therefore we may as well stick to reasonable rates and make a fair profit on the plants if we possibly can do so.

But the main point is to grow good stocky plants, to have them in bloom at the right time, and then we will be able to compete with any of the cheap growers whose plants are as a rule crowded in their houses and consequently very often are long and shanky and should be sold by the yard instead of by the piece or dozen. To accomplish these points we should not pinch or cut back after the middle of March and should not grow them in too high a temperature. Neither did I take into consideration the growing of stock plants which would also increase the cost of production considerably if you want to gather enough cuttings without potting stock plants, and if you want to grow your plants uniformly and of the same size.

I give you here the actual cost of growing 10,000 geraniums as I have it down now, the original having experienced several corrections, from time to time whenever I found that it was not exactly right.

Preparing propagating benches, cost of sand, etc.	\$ 8 00
Making and putting in 10,000 cuttings, ten days	20 00
Potting and placing on benches, five days	10 00
Soil, etc.	6 00
Wear and tear of 2½-inch pots (estimated)	8 00
Care, watering, etc. from Nov. to Feb.	35 00
Repotting into 4-inch pots and placing, 12 days	24 00
Material used in potting	18 00
Care and watering, etc. from Feb. to May	55 00
10 000 4 inch pots	70 00
Coal during winter, 18 tons at \$5 a ton	90 00
Wear and tear of greenhouses, benches, etc., (estimated).	125 00
Total	\$469 00

This would bring them to over 4½ cents each actual cost, to which should be added the expense of marketing, or time expended in the sale of the plants, which may differ in every establishment. We sell them off inside of about three weeks and have not the trouble shifting them from one place to another. When repotting we set pots close together and after Easter, when a lot of stuff is thrown out, we give them more room at once and the plants remain in this position until sold. I do not move them around more than actually necessary.

If you have to use frames in the spring for them there is so much more work and consequently more cost. My plants are generally cleaned once while in small pots, the second cleaning they get together with pinching at the time of repotting into 4-inch pots; after that another picking of dead leaves may be needed after Easter, when we set them a little apart and while handling them then the cleaning is done very fast. I do not think that 5,000 geraniums could be grown as cheap as this, but should like to hear from somebody else who has kept an account of cost of growing these plants and should like to see how our figures compare.

Before I kept a record I had no idea how expensive it was to produce the plants and perhaps would, without it, be

of the same opinion as a friend of mine, who said the other day to me, when I alluded to this question: Why, there is no great cost involved in growing any kind of bedding plants. "What is it? a pot and a little dirt, the rest does not cost us anything." J. B. KELLER.

Rochester, N. Y.

Rubber Joint for Hot Water Pipes.

A correspondent of the London *Gardener's Chronicle* writes in regard to the joint illustrated as follows: "It is generally admitted that the India rubber expansion joints, providing the joint is formed on the pipe or connection, and not by loose rings, are safer than the old socket joints caulked with yarn and cement, these latter often bursting in the most awkward positions, and leaking during severe winter weather. In Richardson's universal joint the work of connection may be carried out in any position or angle with the same freedom as

RUBBER JOINT FOR HOT WATER PIPE.

the ordinary socket pipes, and it may be fixed to any existing apparatus without additional special castings, as all the fittings are ready made with a plain seating for the rubber at one end, and a clip flange and hooked bolt lugs on the other and withal so simple in construction that any ordinary workman can fix them. The joint is very durable and will withstand an internal pressure of 125 lbs. to the square inch. We have a range 350 feet long, heated with pipes connected on this system, which has proved most satisfactory, never having had a single leakage or trouble of any kind."

Baltimore Odds and Ends.

In issue of July 1 (p. 516) it is asked why "some florists having a surplus of certain stock will charge a brother florist in the same city more at wholesale than he retails the same stock for?" The same writer might have propounded numerous other queries of like nature and quite as difficult to answer. There is really no accounting for the strange things men will do when under the inspiration of trade jealousy. In our own limited experience we have known men to "go one better" than merely selling to the trade at an advance on wholesale prices, inasmuch as they elected to throw valuable stock on the rubbish heap rather than accommodate some other dealer by selling to him. But of a somewhat different nature was the smart game—a sort of horticultural euchre—by which the writer was quite recently victimized. Happening to need a few roses to finish out some planting, I bought the requisite number

from a neighboring dealer at \$1.25 per dozen—that was the price agreed on. The roses were delivered, all correct, but when the bill came in later, I found them charged at the rate of \$2 per dozen. In my guilelessness I decided that it was simply a mistake, but in a subsequent interview with the dealer he stoutly repudiated our previous agreement, and stuck to his price as per bill rendered. The gentleman got his money, but he has undoubtedly filled the last order he shall ever receive from me. Verily, the consciousness of having outwitted some other fellow; of having perpetrated a piece of smartness by which some rival dealer has suffered the least inconvenience, is ample cause for self congratulation, and must swell us out to exorbitant proportions in our own esteem.

The custom of giving private gardeners a certain discount on their employer's bills, is another "trick of trade" that obtains more or less in all branches of the business, and a very unhealthy practice it is. The dealer who sells good stock at honest prices, can't afford to pay discounts, and will find it unnecessary to adopt the practice as a bait to attract custom. In all cases when it is in operation the gardener's employer suffers for it, and the writer—without waiting to go into details—may simply say, that he regards the system as one under which the gardener virtually lends himself to cheating his employer, with the seedsman, nurseryman, pot manufacturer, etc., as accessories before and after the fact. I do not for a moment mean to suggest that either party has the least dishonest intention. The dealer who adopts the practice does so to advance his personal interests, the gardener accepts it as a convenient method of adding to his income, but the absence of all dishonest intent does not rid the system of its corrupting tendencies. I have known gardeners—I know them now, by the dozen, who, ignoring all other considerations, will trade only with concerns that pay them discount. Such men can't possibly have proper regard as to quality and value of any article purchased on their employer's account, and I contend, that in proportion as a gardener is indifferent on those points, he is unfaithful to his employer. But the dealer occasionally exhibits himself as as adept at getting both the penny and the gingerbread, and isn't always the generous being he would appear to be. Last fall a gardener in my vicinity called at the seed store in which he dealt for the purpose of buying himself a pruning knife. The liberal proprietor emphatically declined to sell it to him, but he would give him a knife—he gave the knife, and with it his fall catalogue, and the most profuse assurance of his undying friendship and esteem. My neighbor was tickled to death, he told me all about it, wanted me to trade with that firm, and in short, lauded them to the skies. Three months later he consigned them to another "district" where, according to popular belief, the climate is exceeding torrid, and not without cause either, for the annual seed bill having been received, the knife was found charged to his employer at \$3. In justice to the seedsman, however, it must be recorded that there was no charge entered on the bill for the other items presented with the knife.

One of our leading newspapers has for some time been vigorously booming a scheme for the erection of a permanent exposition building, and some of our florists have been investing in exposition

stock. It is unfortunate that the early erection of the building is not sufficiently assured to warrant our delegates in offering it for the fifth annual meeting of the S. A. F. But whether we are ever fortunate enough to get the convention or not, we have always been, and always will be, happy to "take in" visiting brethren. There are doubtless envious mortals who will assert that Baltimore is a slow town, and that Baltimore floriculture is sadly in need of a good stirring up. Perhaps a revival wouldn't hurt us, but for all that the Monumental city contains much to interest the trade; the commercial places of Cook, Pentland, Fraser, or Halliday, for instance, are always good for something new or instructive; moreover, these gentlemen are invariably prepared to receive strangers in the most hospitable manner. The artistic attractions of Patterson Park and the natural beauties of Druid Hill Park will be at their best about convention time, and in addition to all this we have numerous public squares, in several of which very excellent bedding may be seen. Of the many private places in this vicinity it will suffice to mention those belonging to Robert Garrett, and the late T. Harrison Garrett, as being especially interesting to florists. Therefore, delegates to the New York meeting who may have time and inclination to visit Baltimore, will not be utterly disappointed; they will find much to interest them, and, albeit a little slow, they will find Baltimore florists a pretty genial set of fellows, and we sincerely hope that our proverbial hospitality will be severely taxed during convention week.

A few *Lilium Harrisii* should be started during this month for early flowering—we generally start in 5 or 6-inch pots, using a good rich compost, and afterwards plunge the pots in some convenient position outdoors where they can be protected from heavy rains. We rarely repot any of our bulbs, being opposed in a general way, to giving such stock much pot-room. The size pots used at the start must be determined by the size of the bulbs; for a good sized one a 6 inch pot is quite large enough, and the writer would note here that he has demonstrated to his own satisfaction at least, the advantage of using fresh bulbs each season.

Of the four ferns figured on page 545, *Onychium japonicum* and *A. gracillimum* are particular favorites of mine. I had but indifferent success with the former until I adopted the practice of allowing it to get thoroughly pot-bound and feeding it liberally. For my purpose, one good large plant is preferable to several small ones, so that unless I wish to increase my stock of some desirable variety I never divide my plants. Repotting is done by merely shaking away the old soil from the roots, replacing the plants in the same size pots and using a compost consisting of rich, strong loam, with an addition of well rotted cow manure and sand. For commercial or private purposes this plan will be found desirable, in as much as it gives a strong, healthy plant in a comparatively small pot. The writer is a strong advocate of liberal feeding for ferns, some varieties will of course bear more than others, no unvarying rule can be given and the practice is one, like many others, in which the florist must be guided by his own experience and the condition of his plants.

At a meeting of the Baltimore Florist Club held August 1, Messrs. R. J. Halliday and Chas. Campbell were appointed

a committee to make necessary arrangements for the club's attendance at the New York meeting. A. W. M.

Daily Record of Work Done at the Lincoln Park Greenhouses, Chicago, 1887.

August 16—Tem. morning 70°, noon 77°, evening 69°. Wind N. to NE. Finished taking up tulip bulbs which had been heeled in. Commenced propagating *Alternanthera paronychioides* major, taking cuttings from bedded plants. Potted little primulas which had been pricked out in pans. Continued repairing houses.

17—Tem. 69, 73, 70. SE. to NE. Continued propagating *Alter. par. major* and repairs on houses.

18—Tem. 67, 87, 75. NW. to NE. Same as yesterday. Ladies and gentlemen attending the florists' convention visited the park in carriages.

19—Tem. 63, 77, 72. NE. to ENE. Continued propagating *Alter. par. major* and *versicolor*. Cleaned and trimmed beds.

20—Tem. 68, 81, 72. NE. to E. Continued propagating *Alter. versicolor*. Cleaned beds, etc.

21—Tem. 76, 87, 78. E. to S. Sunday.

22—Tem. 71, 85, 72. W. to S. Same as Saturday and potted callas which had been kept dry during summer. Sifted sand at lake shore for use in greenhouses. Picked *celosia* seed.

23—Tem. 57, 62, 64. NW. to N. Potted cyclamens in 2 and 3 inch pots, planted in frame. Potted *Cineraria hybrida* which had been pricked in pans. Repotted for stock variegated alyssums and *Pilea Casei*. Turned compost.

24—Tem. 55, 65, 62. N. to NE. Finished propagating *Alter. versicolor*. Continued picking and cleaning *celosia* seed. Potted for winter stock pileas and *Achyranthes Lindenii*. Continued repairs and turned compost.

25—Tem. 60, 68, 62. E. to N. Potted for winter stock *Alternanthera aurea* nana. Repaired heating pipes. Picked and cleaned seeds.

26—Tem. 60, 60, 62. NE. Potted for winter stock pileas, *achyranthes*, *Alter. aurea*, *A. amœna* and alyssums. Sowed seed of *Calceolaria hybrida* and another lot of *Cineraria hybrida*.

27—Tem. 62, 68, 63. NE. Planted two sashes of frame with alyssum for cut flowers. Planted bed of *celosias* in place of *verbenas* removed. Tied gladiolus and cannas. Trimmed and cleaned beds, etc.

28—Tem. 60, 70, 65. E. Sunday.

29—Tem. 67, 77, 76. SE. to NE. Commenced potting from propagating frame rooted cuttings of *Alternanthera paronychioides* major in rose pots, three cuttings in a pot. Cleaned beds.

30—Tem. 64, 78, 70. SE. to NE. Continued same as yesterday and collected pots and cleaned frame yard.

31—Tem. 64, 80, 72. S. to SE. Same as yesterday.

Carnations for Summer Bloom.

Messrs. Heim Bros. & Co., of Blue Island, near Chicago, have carnations planted in the open ground, from which they are now (August 6), cutting handsome clean florets daily for market. They have in one bed 2,000 *Pres. de Graw*, from which they gather 5,000 florets per week, expecting to double the quantity soon. Of other varieties "Sport" is very prolific and with them the best dark crimson.

They have a total of 7,000 plants, all January struck cuttings, in due time shifted to 3-inch pots and soon after planted. So soon as they commence to push blooming shoots they are carefully staked and tied. Many plants now have 25 to 30 buds and blooms, with an even growth of about eighteen inches tied to cane stakes all of the same height. There is not a prettier sight around Chicago than these carnations. The soil in which they are growing is a black, sandy loam, very loose and friable.

The Greenhouse in Summer.

July and August are the two months in the year when most all florists may take a vacation, for they are then not overburdened with business, and stock is easy taken care of at this time of the year. Many of the brotherhood will take an opportunity to visit their friends and associates, far or near by, to obtain information, or see what others grow and how they grow things, and generally they profit by the visit in some way, be it either in seeing how a certain plant ought to be treated or else how it should not be treated. Unfortunately, midsummer is a very poor time to look at greenhouses, for we have not much in them and visitors can form no idea of the appearance the houses would present at other seasons, and the visited party may feel a little shy at not being able to show at least one well arranged house with decent plants, for his ability may be doubted by the visitor if there is nothing particular to show.

There are many exceptions of course where a general assortment of stove plants and palms etc. are grown; such places are always worth seeing, but I am speaking of those establishments where cut flowers and bedding plants form the chief feature of the place, and there we often find all the houses empty in summer.

I think it would pay those florists to grow on a bench or two of ferns or flowering begonias for cutting, and by growing a few other plants, such as palms, dracenas, marantas or other foliage plants, to intersperse among the ferns, the house may be made to look very attractive and pleasing. As some may object to the keeping of such plants during the winter months on account of space occupied by them, I would suggest a few fancy caladiums, *Rex* begonias, *alocasias*, *dieffenbachias* or the like. Caladiums can be kept at rest from October to May and still be worth looking at in July or August. Of *Begonia Rex* most of us have to keep stock plants of each variety to propagate from, and if repotted into large pans or pots make capital plants to set off a house, where we may grow ferns or summer blooming begonias. In the fall we may cut up the leaves and throw the plants out or set them under the bench and use them another year for the same purpose. A few plants of *Cissus discolor* will do in the same house and when fall comes the leaves or branches come very handy for designs or baskets and will be cut down even before we want them out of the way and they also can go under the bench for the winter. The several varieties of *Gesneria zebrina* can be grown, a dozen bulbs in a pan in the same atmosphere and with the same winter treatment, even the *fittonias* and *cyrtodeiras* may be set under the benches and come out all right in spring to help to color up the house with their beautifully veined foliage. We can grow them either in baskets and suspend them from the roof or in pans

or pots and set among the other plants.

The number of plants and varieties that will submit to such neglect in winter is astonishing and I only mention a few of them. Eucharis I treat in the same way, getting two crops of flowers from them, but have to leave them on the benches until January before the second crop is all cut. It is not much additional work to attend to the wants of six or eight dozen extra plants, even if they are in extra large pots, being set among and over the smaller ferns and forming prominent points in the arrangement. Their wants are noticed at first glance and whoever gives this plan a trial once will not give it up again on account of the little extra work. Aside from the satisfaction it may afford us in showing our summer visitors a few good plants, even if we have no sale for such things, we may find much pleasure in it ourselves if the plants are kept as they should be. It is wonderful how much prettier a bench of ferns will look after we tilt up a dozen or more good sized plants with ornamental foliage over them; try it.

New York Floral Styles.

The bouquet de corsage is worn with graceful effect at present both in and out of doors, at summer resorts. It is a spray of roses, asters or pea blossoms, and sometimes only ferns and grasses. It is placed at the edge of the surplice on the bodice on the left side. It is made long, narrow and delicate. Bennett or Papa Gontier roses are the most fashionable, a decided turn in the fitful wheel of fashion from the yellow, pink or white flowers that have so long been favorite. With light attire the crimson spray on the breast is a beautiful ornament, particularly when soft lace fills the open space. It also looks well with a white vest of linen or corduroy, and is conspicuously pretty worn on racing costumes.

Ornamentations with wheat are much in vogue, and are much liked for their rustic effects. A cluster of this golden grain is attached to the fan, to the parasol and the sun hat has one side caught up with it. White felt English walking hats, which are now the newest style for head gear, are trimmed with a band of moire ribbon and a bunch of wheat. Wheat is worn for the corsage spray, in the position described above. Belt bunches have gone out of style.

The blue shaded hydrangea trusses that are sent daily from Newport, are combined exquisitely with the lilac-tipped "butterfly" pea blossoms, which are grown in great perfection at the same place. Funeral wreaths for the casket of the late Courtland Palmer were arranged by Klunder, the blue trusses of hydrangea and the pea blossoms being separated by clusters of ivy leaves. The sentiment of ivy renders it most expressive for funeral pieces.

The new style of bouquet will take precedence of all others the coming season. It is now made up for choice orchids with pink roses, and a fringed center of butterfly pea blossoms. Orchids are invariably used for the center, when funds will allow. To arrange this bunch in its fullest beauty the center must be composed of oncidiums.

The daintiest gown trimmings with natural flowers have been on the sleeves of the Directoire styles of dresses. The open sleeve is edged about with daisies, or any small blossoms, and there is a knot of these on the inside sleeve or cuff just outside where the lace finishes. White surah gowns, or any colored ones made for full dress occasions are easily ornamented in this way and make the costume elegant in the extreme. Yellow daisies are used at watering places for putting about the collar, jacket and around the plastron, instead of gold braid. Flowers are far more beautiful than bullion or tinsel, but, of course, must be daily renewed. However, this

"keeps the maids busy" as one lady remarked.

Baskets of braided silver and gold, vases of rock crystal and Bohemian glass are used for table decoration. These are filled with lilies, roses or any choice blossoms available. They are set on mats of ferns, and look beautifully. Silver, gold or crystal contrasts finely with lacy greens. There are three mats on the table, the center one being the largest. Favors are given at both luncheons and dinners. For breakfasts there is only a center piece and this is usually composed of a collection of flowers harmoniously arranged.

FANNIE A. BENSON.

London Notes.

One of the events of the London season now drawing rapidly to a close, was the evening fete of the Royal Botanic Society of London, held in their beautiful gardens in Regents Park, on July 4, from 8 to 12 p. m. Fortunately the night proved fine and the fete was attended by the elite of London. The grounds were beautifully illuminated with thousands of fairy, French and other lamps, as well as gas jets, and at 12 o'clock on closing, colored fires were displayed to good advantage. Four of the best bands, viz: the First Life Guards, Royal Horse Guards, Coldstream Guards and the Victoria Rifles played choice selections of music during the evening. The latter band being stationed on a small island in the lake was peculiarly attractive. The Royal Hand Bell Ringers performed at intervals in the American tent and were much appreciated.

The exhibition consisted of floral decorations for dinner tables, baskets of plants and flowers, bouquets and flowers arranged for personal use; these were in the large tent, while in the museum and corridor, paintings, sculptures and artistic works relative to plants, flowers, trees and artificial flowers were displayed. Among the exhibits we noticed a very good collection of orchids, exhibited by Hugh Low & Co., of Clapton, these were arranged in artistic groups in the tent where the table decorations were shown. Messrs. Paul & Son, of Waltham Cross, exhibited a choice group of roses among which we noticed a new rose of their own raising called the Graud Mogul, its color is a dark velvety red and it looked to us to be a rose of merit.

The first prize for floral table decorations was won by W. L. Buster, of St. Mary Cray, Kent. The principal flowers used were eucharis stephanotis and ferns. A collection of cut flowers shown by Messrs. Barr & Son, of Covent Garden, arranged in small vases was much admired. Some very fine specimens of pelargoniums (pot plants) were shown, among which was a magnificent speci-

men of *Pelargonium delicatum*. Some very fine rhododendrons were exhibited by Anthony Waterer, of Knap Hill.

On the whole the fete was a decided success; it was largely attended and evidently appreciated, the music was excellent and the illuminations of the grounds were very effective. The trees and shrubs were hung with fairy lamps and the floral devices on the lake, in colored lamps were perfection. The weather had much to do with the success of the fete as after the recent rains the grass and shrubs looked their best.

On July 14 the National Rose Society held their annual rose show at the Crystal Palace and a finer display of roses we never saw. They were all well grown and perfect in shape and color. The exhibition commenced at 12 o'clock and lasted until 6; two shillings and sixpence admittance being charged to the palace and grounds during these hours. The roses were arranged in double rows along the center of the palace and were shaded by an awning. They could be seen with some comfort in the early hours of the day but from 4 to 6 o'clock the crowd was so dense that one could hardly get near the tables. They were arranged in green wooden boxes filled with moss and held in small tin holders, twelve roses being shown in each box. Each variety was named and had the address of the exhibitor on a card. It is estimated that over 40,000 people visited this show. After 6 o'clock when the show was over the roses were sold in many cases.

We note on page 499 of the AMERICAN FLORIST the article "Will a rose show in June prove a success." After seeing the Crystal Palace show we should think it would. To be sure the roses most favored in England are those varieties grown out of doors, as the climate favors such. But we should think a collection of roses grown in houses would be equally attractive. Among the winners of first prizes were Geo. Prince, of Oxford, Benj. R. Cant, of Colchester, Chas. Turner, of Slough, Frank Cant, of Colchester—who won the National Rose Society challenge trophy for seventy-two distinct trusses. This display was very fine, each rose being perfect. The apricot yellow colored rose W. A. Richardson exhibited by John House, of Peterborough, was much admired. This firm also exhibited a new strawberry called The Victory, a cross between the President and British Queen. This new variety is said to be very early and prolific. Messrs. Thos. Rivers & Son, of Sawbridgeworth, had a very fine display of hot house peaches, nectarines, figs, grapes and cherries. These were shown as plate specimens and also growing on the trees. This firm grow largely for the London market and have over forty houses in use now averaging 100 feet long and about 20 feet wide each.

plants; W. E. Wallace, Hartford, Conn.,
roses, clematis, azaleas, rhododendrons
and ornamental nursery stock.

WITH THIS ISSUE begins the fourth
volume of the AMERICAN FLORIST.
Three years have come and gone since the
FLORIST was first sent out as a candi-
date for the favor and patronage of the
trade. The result is known to all. The
many complimentary letters we receive
would indicate that we have achieved
considerable success in our efforts to
supply a journal which would meet the
requirements of the whole trade. But
we can still see room for improvement,
and shall continue our efforts unabated.
The great strides made in the florists'
trade within the last few years are cer-
tainly remarkable. Progress is the order
of the day and we shall exert every effort
to keep in the van.

INSECT LIFE is the title of a pamphlet
issued by the U. S. Department of Agri-
culture, division of entomology, Wash-
ington. It contains numerous notes on
insects injurious to farm products. It
will be published as a periodical and will
prove a speedy and regular medium for
the reports of the progress of investiga-
tions. It will be published on an average
once a month and is under the super-
vision of Prof. C. V. Riley, Government
entomologist.

SUBSCRIBERS will confer a favor and
insure against missing any of the num-
bers by renewing subscriptions promptly
when they expire. The date of expira-
tion is noted on the printed address label
on each number you receive.

London Notes.

Mr. J. B. Fuller, of Jas. Vick, Rochester, is now in London and after a short visit to the continent expects to return to America the end of August.

Mr. C. L. Allen, of the A. B. Cleveland Co., is also in London and expects to leave for home on the 21st.

Mr. J. C. Vaughan, of Chicago, is now on the continent inspecting the seed crop and visiting the leading seed establishments, he is expected in London this week.

Mr. B. K. Bliss, of Boston, is also in London on his way to the continent.

Mr. Oliver Landreth and his nephew, Mr. B. Landreth, Jr., were here a short time since, and left for Philadelphia on June 10.

Reduced Postage.

What one man or ten men can not accomplish may frequently be brought about through the efforts of many. As a result of the constant agitation of the postage question and the thorough organization for the purpose, of the various societies interested, a bill has been passed making the postage on seeds, plants, bulbs and cions one cent for each two ounces or 8 cents a pound instead of 16 cents a pound, the rate which has prevailed for several years. We need not enlarge upon the benefits which will accrue to the seed and plant trade from this reduction, they are known to all.

Cincinnati.

A remarkably fine display of floral work was made on the first "Floral Day" of the Cincinnati Exposition. The entries were made by A. Sunderbruch and B. P. Critchell & Co. Nearly all the designs shown this day were representations of Odd Fellows emblems as the uniform branch of this order was largely represented in the city at a competitive drill.

Sunderbruch's designs were: the three links, heart and hand, altar with incense urn, the bundle of sticks, stump and axe, rod and serpent, bow and arrows, open bible, cross and crescent and an emblem representing a past-officers jewel of in-laced triangles.

Critchell's designs were: the tablets of stone, tent, altar and bible, bee hive, triangle with crown, staff and sword, heart and hand, bow and arrows and two superb banners.

The prevailing flowers in all the designs were roses, carnations and balsams with ivy leaves and fern fronds. The designs were arranged in the grand vestibule of the Music hall and made a fine display.

The prizes were three in number, and were awarded for beauty of design, quality of flowers and excellence of workmanship. The judges awarded the first prize to Sunderbruch and the second to Critchell.

Water Lilies for Fall Bloom.

The increasing interest taken in this lovely class of plants in all sections of the country, warrants the thought that their cultivation will become quite general in the near future. They are easy to cultivate; and when planted at proper intervals may be had in bloom at all seasons.

As our native kinds flower during the summer, the impression prevails that

this is the only time when they may be looked for; but for market purposes, aside from a short watering place trade, they bring better prices at all other seasons from flower dealers and purchasers. The blue ones as a rule, are best for forcing, as they give more blooms than the other kinds; but the beautiful Devonensis is very desirable, for, being a night bloomer, it is very useful for evening wear and decoration; although the ingenuity of the florist comes into play with the other kinds, as they are kept open by placing two or three wires across the center of the flower; and however much this practice is to be deprecated the wires are scarcely observable.

Young plants are best for forcing; they do not give such large flowers at first as old ones, but they come into bloom quickly, and last a longer period in flowering condition. They require three or four inches of good rich compost; and the same depth of water is sufficient, they will bloom more freely than if the water is deeper.

A shallow tank with a hot water pipe running around it is best, but if this is not to be had pans or shallow tubs will grow them first rate, if placed in a warm position in a house with a night temperature of 60°, or the pans may be set on the pipes in a rosary, or other house where the pipes are uncovered, with two strips of wood under the pans to prevent over-heating. The gradual evaporation from the pans of water will improve the atmosphere of the house for most plants. Malden, Mass. BENJ. GREY.

Delphinium California.

This was sent from California by a Chicago lady to the South Park a few years ago, from which I got my start. Is it new? I do not find it described in

any catalogue or encyclopedia of horticulture. It is worthy of wide dissemination. It is a hardy perennial, comes true from seed, seed planted in April comes into flower middle of July, old plants come into bloom in June and continue in profuse bloom until cut down by frost. The flower is a lighter and brighter blue than the D. Formosum and somewhat smaller with twenty or more flowers in a raceme borne on a stiff stem; leaf similar to, but smaller and finer cut than the D. Formosum. The habit is a free growing, stiff stalk, freely branching, about thirty inches high, apparently at home in most any soil, and transplants easily, may be moved at any time, even in flower, makes a beautiful specimen plant for the lawn, fine cut flower and good pot plant.

Address **GEO. THOMPSON & SONS,**
LOUISVILLE, KY.

New York.

Alex McConnell is repainting and generally refitting his store. He has laid a hard wood floor which is a great addition to its appearance.

Editor Stiles of *Garden and Forest* says that David Allan has no right to name an orchid; that only the famous Reichenbach has this right.

John May has his largest rose house filled with Mrs. John Laing, which he intends to give a fair trial. He is not in favor of this rose because it turns a muddy color after it has been cut a day. He intends to "roast" Bennett of London if this flower is a failure, at least, he says so.

Peter Henderson has a new double hydrangea (*H. stellata plena*), which is a deep shade of pink, and each individual flower is imbricated, double and an inch in diameter. The trusses are of the largest size, and the plant is very hardy.

Double hollyhocks are making a gorgeous display in surrounding gardens. They are showing amazing tints—mulberry, white, golden yellow, scarlet and some the nearest to black of any known flower.

A few of a new crop of *Perles des Jardins* are coming in and sell for \$2 a dozen. Purple asters are appearing early and bring 25 cents a flower.

Ames, of Boston, has purchased Siebrecht & Wadley's new *Cattleya gigas* for a fabulous sum. It was on private exhibition for a fortnight. I understand that Mr. Ames will not sell it for \$3,000.

Arethusa bulbosa grows and blossoms freely on the borders of the Hackensack river.

Mr. Brett, who was gardener several years to James R. Pitcher, has left him, Mr. Manda now taking charge.

There was a magnificent display of flowers at the funeral of the late Courtland Palmer, Esq. A full length picture of the deceased was framed in crimson roses. Robert Ingersoll sent palm leaves clasped by lilies, and there were great quantities of orchids, roses and pea blossoms. One wreath was tied with a sash of No. 30 ribbon four and a half yards long.

Mr. A. D. Cowan, the popular treasurer of the New York Florists' Club, has been laid up for a week with inflammatory rheumatism, but is now around again.

CEMETERY SUPERINTENDENTS.—The Association of American Cemetery Superintendents holds its second annual convention at Brooklyn, N. Y., Wednesday, September 5, 1888. A. H. Sargent, Akron, O., is secretary.

DREER'S OFFER OF PLANTS FOR AUGUST.

SHOULD HAVE OUR

DIRECTORY,

Address AMERICAN FLORIST CO., 54 La Salle St., CHICAGO.

Oil the Lumber.

I presume the average life of ten years for commercial greenhouses as expressed by the FLORIST is nearly correct, but houses will easily last twice that time by exercising more care before and after building to preserve the lumber from decay in the most exposed positions.

In permanent houses the first parts to give out are the posts, the sills and the ends of the rafters. Yellow locust posts will last a great many years without any preparation or preservative. But probably iron posts will be cheaper than locust in many localities. The sills and rafters can be preserved by saturating with linseed oil before painting or erecting. After the rafters are cut and ready for position stand them on end in a tub or bucket with a few inches of linseed oil in the bottom. In a few hours the lumber will be saturated to the height of a foot or more. Then reverse them and soak the other end. I have a house that was built twenty-five years ago, in which the rafters were treated in this way and they are good yet while the sills, which were not so treated, have rotted out and had to be renewed several years ago.

I know the necessity which many florists feel of saving expense where they can when building, but think there is a great deal of "penny wise and pound foolish" economy displayed in greenhouse building.

S. C. MOON.

Morrisville, Pa.

WROUGHT WELDED BOILERS.—The claim is made that these possess considerable advantage over those of cast-iron in that the brittle nature of cast-iron is liable to fracture whether any pressure is carried on the boiler or not, while those made of wrought iron and solidly welded without seams, joints or rivets will expand and contract freely without any risk of fracture.

CHARLES L. BURR,

SPRINGFIELD, MASS.

LOCK BOX 338 LANCASTER, PA

Buffalo.

A game of base ball between the florists of the east and west sides of the city on July 27, gave glorious entertainment to the balance of the local florists who officiated as spectators. The stores in general were closed and the "grand stand" contained a convention of the entire local trade—all except one, who it is believed has an especial horror of foul balls.

The battery for the East Siders were Steve Jones, pitcher, Mm. Milley, catcher; for the West Siders Macomber and Cullendon pitchers, Neubeck, catcher. These notes were taken between the innings and refreshments.

Neubeck's coaching failed to rattle the East Siders and his catching was very fine. Several flies were born during the game, but the one gathered in by the old veteran Mepsted was the only one caught. The spectators shrieked and applauded in the regulation style. In one of the last innings Neubeck sent the ball to short stop who managed to hold it and fire it to first baseman Cleaves. Neubeck and the ball arrived together and a cloud of dust obscured the tragedy. When the cloud lifted Neubeck and Cleaves were seen lying on the ground considerably damaged but still alive and game. The umpire declared it an "out" and the spectators tied their lungs loose in the most approved way.

The refreshments "took" well, in fact they were all taken by the crowd. Wm. Scott claimed he was hit by the ball while at bat and tried to get a base, but the hard hearted umpire would not allow it, so Mr. S. assumed a very affecting limp and again struck at the atmosphere. There was some talk of organizing a balloon club for the benefit of Nolan, Christensen and Rebstock. Score 14 to 13 in favor of the East Siders. A few bruises and broken fingers but no deaths as the West Siders have not yet settled with the umpire.

Following are the names of the participants: West Side club—Macomber p, Neubeck c, Wm. Scott 1b, Cullendon 2b, Mac 3b, Nolan cf, Christensen rf, Long lf, Rebstock ss. East Side club—Jones p, Wm. Milley c, Cleaves 1b, Pickelman 2b, W. J. Palmer, Jr., 3b, Bishop cf, Mepsted rf, A. Scott, Jr., lf, Jno. Milley ss. A. P. I.

"15 YEARS' EXPERIENCE. THE GURNEY SAVES 33 1/4 PER CENT IN FUEL."

Letter from Thomas Gray, of Fitchburg, Mass.,
In reference to

GURNEY HOT-WATER HEATER.

FITCHBURG, MASS., April 13, 1883.
Dear Sir:—In answer to yours, asking my opinion of the Gurney Hot Water Heater which you sold me, would say that I have had fifteen years' experience in heating hot houses by water, and must say the Gurney Heater purchased of you has proved itself a wonder, both in power and economy, using one-third less fuel to get same results than any heater I have ever used. The brick-lined pot I consider a special feature, as it renders combustion equal throughout the entire pot.

Yours truly,

THOMAS GRAY, Florist.

GOLDMAN'S ATOMIZER AND SPRINKLER

FOR A THOUSAND AND ONE USES. COMMENT UNNECESSARY

Practical and Useful.

You will not part with it.

For Flowers, Window Gardening, House Plants, Destroying Insects, and for various fine sprays. Most natural substitute for fog or dew. By dipping in water while closed, fills instantly. Ball finely perforated; spray controlled by pressure of hand. Size of lemon squeezer. Weight, 5 oz. Exclusive Territory to Agents. Sold on its own merits; no talk. Sample by mail, 50 cts. This is the Atomizer that sold so well at the Danbury, Albany and other Fairs. Florists and Seedsmen, show it to your customers; sells fast; good profit. Excellent for indoor plants. Send for illustrated pamphlet and price to the trade. Mention this paper.

M. GOLDMUN, Manufacturer, Pittsfield, Mass.

GREENHOUSE HEATING.

BY A. B. FOWLER.

Explains fully all the best systems of heating greenhouses by both hot water and low-pressure steam. Tells you the points to consider in selecting an apparatus. How to adjust same to various locations; gives the results of the latest scientific experiments. Shows how to compute the number of feet of pipe required for a given space; draft and other important matters.

It is highly commended by Mr. John Thorpe and others. Postpaid, 75c.

Sent on receipt of price. Address,

CHICAGO AND NEW YORK, AUGUST 15, 1888.

Supplement to No. 73.

THE AMERICAN FLORIST

Society Headquarters.

Headquarters will be in room 11, Fifth Avenue Hotel, where the secretary and treasurer can be found as early as Monday evening August 20. These gentlemen will be pleased to relieve you of \$2 and give you in exchange a receipt and the badge for '88.

THE HEADQUARTERS of the AMERICAN FLORIST during the convention will be at the Fifth Avenue Hotel, room 11. Call and see us.

PROGRAMME.

TUESDAY, AUG. 21, 1888.

FIRST DAY—MORNING SESSION, 10 O'CLOCK.

ADDRESS OF WELCOME—RESPONSE—
PRESIDENT HILL'S ADDRESS—REPORTS
OF SECRETARY AND TREASURER—RE-
PORTS OF STANDING COMMITTEES—
REPORTS OF SPECIAL COMMITTEES—
MISCELLANEOUS BUSINESS—DISCUS-
SION OF PRESIDENT'S ADDRESS.

FIRST DAY—AFTERNOON SESSION, 3 O'CLOCK.

ESSAY.—*The Elevation of Our Business.* H. H. BATTLES, Philadelphia, Pa.

ESSAY.—*Ferns, Palms, and other Decorative Plants.* C. D. BALL, Holmesburg, Pa.

FIRST DAY—EVENING SESSION, 8 O'CLOCK.

QUESTION BOX.

1. What benefit is derived by florists from a scientific education? Answered by A. E. Whittle, Albany, N. Y.

2. Is the sale of chrysanthemums an injury to the cut-flower trade? Answered by J. M. Jordan, St. Louis, Mo.

3. Is a wholesale market for the sale of cut-flowers desirable in our large cities; and if so, what is the best manner of organizing and conducting such? Answered by J. C. Vaughan, Chicago, Ill.

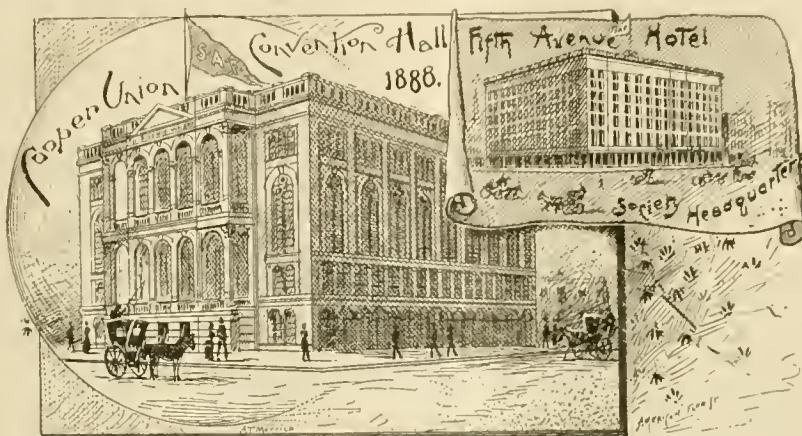

4. Horticultural Exhibitions: What is their value to the florist, and what can be done to render them more profitable and popular? Answered by John Thorpe, Pearl River, N. Y.

5. Can ixoras, and other flowering stove plants, be grown so that flowers can be sold at a profit? Answered by John G. Gardner, Jobstown, N. J.

6. What varieties of orchids are of easiest cultivation and most profitable for florists who are not professional orchid growers? Answered by Benj. Grey, Malden, Mass.

7. What are the best varieties of ferns to grow for general retail business? Answered by Robt. Craig, Philadelphia, Pa.

8. Which are the most desirable varieties of chrysanthemums to grow for cut bloom for market, including the earliest and latest varieties? Answered by John Henderson, Flushing, N. Y.

9. What are the best six carnations for the general florist to grow—colors red, pink, yellow, and white? Answered by Chas. T. Starr, Avondale, Pa.

10. What is the best way to propagate *Acacia pubescens*? Answered by Robt. J. Halliday, Baltimore, Md.

11. Is the mail trade in plants an injury to the general business? Answered by Robt. George, Painesville, O.

WEDNESDAY, AUG. 22, 1888.

SECOND DAY—MORNING SESSION, 10 O'CLOCK

NOMINATION OF OFFICERS FOR
ENSUING YEAR.

ESSAY.—*Roses: from the Retailer's Standpoint.* THOMAS CARTLEDGE, Philadelphia, Pa.

SECOND DAY—AFTERNOON SESSION, 3 O'CLOCK

ESSAY.—*Roses: from the Grower's Standpoint.* EDWIN LONSDALE, Chestnut Hill, Pa.

REPORT on Hail Insurance. J. G. ESLER, Sadle River, N. J.

SECOND DAY—EVENING SESSION, 8 O'CLOCK

QUESTION BOX.

1. What varieties of roses introduced within the last two years, if any, are worth growing for winter forcing? Answered by M. A. Hunt, Terre Haute, Ind.

2. What are the best and most profitable varieties of hybrid perpetual roses to grow for forcing for early and late use for general florist? Answered by Ernst Asmus, W. Hoboken, N. J.

3. How many varieties of tea and hybrid tea roses are necessary for the general grower; and which are the best varieties to grow? Answered by J. M. Gasser, Cleveland, O.

4. Does propagating from blind shoots year after year have a tendency to render any plant less floriferous? Answered by Jas. Pentland, Baltimore, Md.

5. Can *La France* and other roses be forced profitably in pots during winter? Answered by W. K. Harris, Philadelphia.

6. Why do certain roses, such as *Perle*,

Souvenir, etc., that used to be favorites for forcing, now seem to grow less satisfactory every year? Answered by M. A. Hunt, Terre Haute, Ind.

7. Will the larva of the rose-bug stand freezing? In other words, is it safe to spread infected soil taken from the greenhouse and grow sod upon it for future use? Answered by Robt. Craig, Philadelphia.

8. Are we not overdoing the rose business for cut-flowers? Answered by B. P. Critchell, Cincinnati, O.

THURSDAY, AUG. 23, 1888.

THIRD DAY—MORNING SESSION, 10 O'CLOCK

ELECTION OF OFFICERS.

ESSAY.—*Soils and Fertilizers.* J. H. TAYLOR, Bay Side, N. Y.

THIRD DAY—AFTERNOON SESSION, 3 O'CLOCK

ESSAY.—*Modes of Heating, and their Relative Cost of Construction and Operation.* J. D. RAY, NOLDS, Riverside, Ill.

ESSAY.—*Nomenclature.* ROBT. J. HALLIDAY, Baltimore, Md.

THIRD DAY—EVENING SESSION, 8 O'CLOCK

QUESTION BOX.

1. What is the best method of preserving wood in greenhouses? Answered by S. Kehrman, Jr., St. Louis, Mo.

2. What is the best mode of building horticultural halls, with a view to cheapness of construction, plenty of light, and adaptability to exhibition of plants, flowers and fruits? Answered by J. N. May, Summit, N. J.

3. What has been the result of slate benches the past season; and effect of same on plants planted out on them? Answered by John Smith, Yonkers, N. Y.

4. What is the best insecticide for general use in the market to date? Answered by Robt. Craig, Philadelphia, Pa.

5. Has the use of greenhouses constructed entirely of iron and glass been satisfactory in this country? Answered by P. A. Schmitt, Glenville, O.

6. The uses of the thermometer and the hygrometer in plant houses? Answered by Chas. P. Anderson, Flushing, N. Y.

7. What is the best way to use natural gas in flues and under steam and hot water boilers? Answered by J. B. Ferguson, Pittsburg, Pa.

8. Insuring Greenhouses: What companies assume risks of this kind on stock and houses? Answered by J. N. May, Summit, N. J.

N. B.—The "question box," as heretofore, will form an important part of the proceedings. Most florists have questions to ask. Don't be afraid to write them on your business card and drop them in the box. The president will appoint competent members to answer them at the first convenient opportunity.

FRIDAY, AUG. 24, 1888.

FOURTH DAY.

The New York Florist Club will tender an excursion to the society, and hope that every member will so arrange his plans as to accept of their hospitality.

PROPOSED AMENDMENTS TO THE CONSTITUTION.

The secretary has been notified, in accordance with Article X. of the Constitution, that the following amendments will be proposed:

1. To amend Article IV., by inserting the words "Vice-President and Treasurer," so that the clause shall read thus: "Its government between the sessions of the society shall be vested in an Executive Committee of nine, to which the President, Junior Ex-President, Secretary, Vice-President, and Treasurer, as ex-officio members, shall be added."

2. To amend Article V., by substituting "second Tuesday in September" for "third Wednesday in August," so that the clause shall read thus: "This society shall hold an annual meeting on the second Tuesday in September, etc."

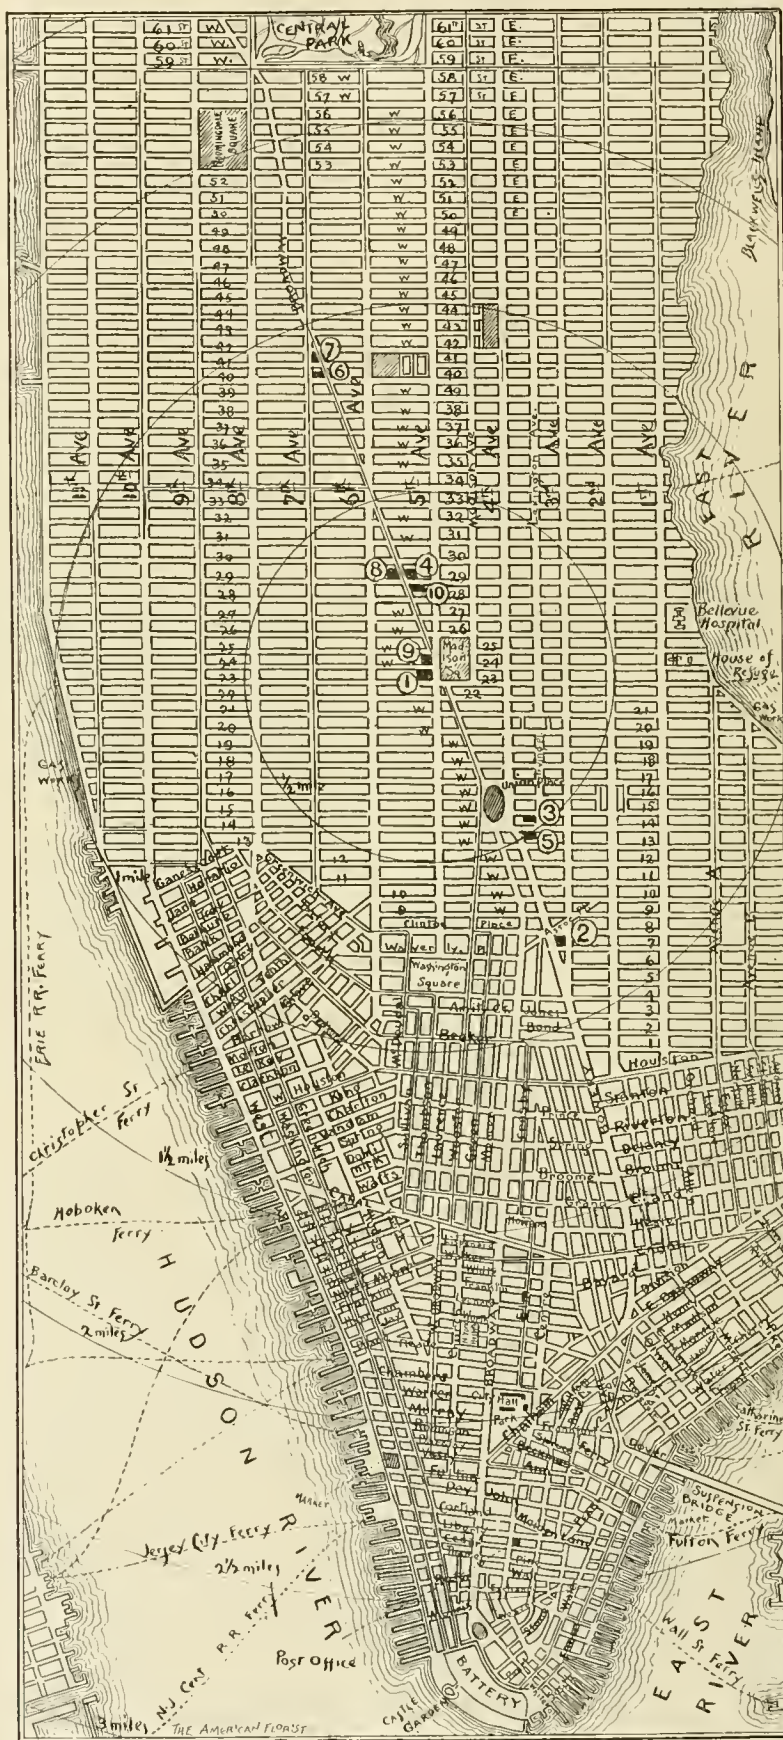

IF YOU can throw any light on any matter under discussion by the convention don't be afraid to speak up. Talk as distinctly as possible and cover the point in the fewest words you can.

CARDS.—Bring along a good supply of cards with your name and address plainly printed thereon. Pass them around and let us know who you are and where you come from. Make as many new acquaintances as you can, this is one of the objects of the meetings.

THE EXCURSION.—The excursion tendered to the society by the New York Florists' Club occurs on Friday, August 24. Arrange matters so that you may remain and accept the generous hospitality of the New York club. This will be a gala day. See complete programme on another page. The steamer leaves from Twenty-first street, North River, at 9:30 a. m.

The Excursion on Friday.

The New York Florists' Club—John N. May, president; Jno. H. Taylor, vice-president; W. S. Allen, secretary; A. D. Cowan, treasurer,—has arranged for a grand midsummer excursion on the Hudson river on the elegant, commodious and newly refitted steamer "Long Branch," in command of Capt. James Lynch.

The steamer will start from Twenty-first street, North River, on Friday, August 24, at 9:30 a. m.

A landing will be made at Iona Island, where a base ball game will be played by teams selected from members of the society, representing Chicago and Milwaukee versus New York and Philadelphia. Music will be furnished by Schaller's Military Band and Melbourne's Orchestra.

Two grand morning and afternoon concerts will be given, in which a number of noted artists will appear. A collation will be served on board. Mr. William Elliott is chairman of the executive committee and director in charge.

PROGRAMME.

ROSES

FOR IMMEDIATE PLANTING

I have prepared a very fine stock of the following sorts in 4-in. pots which I offer as follows:

Bon Silene, Mad. Cusin and Souv. d'un Ami, at \$12 00 per 100.

The Bride, C. Mermet, Duke of Connaught, La France, Marquis de Vivens, Niphotos, Papa Gontier, Perle des Jardins and Sunset, at \$13 00 per 100.

American Beauty, at \$15 00 per 100.

W. F. Bennett, at \$16 00 per 100.

I also offer some fine plants of Meteor, Souvenir of Wooton, Mrs. John Laing, Miss Edith Brownlow, Earl of Dufferin, Lady Helen Stewart, and other choice Hybrids; and a fine stock of H. P.'s on their roots for fall delivery.

My place is one hour's ride on D. L. & W. railroad from New York city. Delegates to the convention who favor me with a visit can see for themselves what I offer.

JOHN N. MAY,

MAY'S

COLOSSAL MIGNONETTE

We have the pleasure to announce that we have been appointed the sole agents for the grower, MR. JOHN N. MAY, Summit, N. J., for distributing this season's crop of

"MAY'S COLOSSAL MIGNONETTE."

The seed was saved from the most select spikes, measuring from nine to thirty inches. For Florists' use, May's strain

HAS NO EQUAL,

and is the only large variety which retains its fragrance when fully developed. Sealed packets only 25 cents each.

No order accepted unless accompanied by a remittance in cash or postage stamps.

HENDERSON'S
PANSIES.
FOR
FALL
SOWINGWe offer for delivery in
August, or as soon as our new
crops are received, Pansy seed
of more than usual excellence
in color, size, selection and
variety; our contracts having
been placed with celebrated
specialists in Scotland, Eng-
land, France and Germany.
Our annual exhaustive trials
of hundreds of varieties and
strains, and the large quan-
tity of Pansy plants we grow for a critical trade, enables us to select probably better
than any other house, really high class strains, and the immense yearly increase in
our sales show that our customers appreciate our efforts in this direction.

In comparing prices remember that one ounce of Pansy contains 30,000 seeds.

	Per oz.	PANSY. In separate colors.	Per oz.
Henderson's Fancy, mixed (Belgian.)		Emperor William, ultra marine blue.....	\$ 1.25
For rich and varied colors no strain in ex- istence can surpass this.....	\$ 6.00	Pastel, or King of Blacks.....	1.00
Henderson's Highland, mixed. (Scotch.)		White Treasure.....	1.00
This without exception is one of the finest strains of pansy in the world—the flowers be- ing of the largest size, perfect in form, and of a great variety of beautiful colors, 1-8 oz. \$3.00 22 (0)		Yellow.....	1.00
Premier, mixed, (French), per 1-8 oz.	\$3.00 22 (0)	Snow Queen, satiny white, no eye.....	1.25

		Lord Beaconsfield, violet shading to white... 1.50	
		Gold margined.....	1.00

The new Fancy Pansy seed produced a bed of Pansies so beautiful that it attracted the attention of
many passers by, and I had many inquiries of where the seed could be obtained. DR. WM T. CLARK,
HOUSTON, TEXAS.—I get finer and larger flowers from the plants raised from your Fancy Pansy seed
than all others. MRS. M. W. WRIGHTLITTLE FALLS, N. Y.—We received the new Fancy Pansy last year, and had the finest ever grown in
this section. MAGILL BROS., Florists.FARMINGDALE, N. Y.—The Pansies I got from you last Spring were magnificent. E. W. WINSOR,
NEWARK, N. Y.—Our Pansies and Primulas, got from you last Spring were superb; the Primulas, the
best we ever had. LEVI A. LOVELAND, Florist.

PETER HENDERSON & CO.,

35 and 37 Cortlandt Street, NEW YORK.

Our Florist's Catalogue of other flower seeds for Fall sowing will be sent on application. Our
Bulb Catalogue will be ready for the trade about Aug. 15th, and our retail about Sept. 1st.

Cypress Sash Bars.

Much has been written concerning the building of durable Greenhouses, and recommending the use of slate, iron and cement. Admirably as these answer the purpose they increase the cost to beyond the means of the average florist, and it follows that some variety of wood will remain the chief material used in such structures. It is our firm belief that no wood fills all the requirements as well as **CLEAR CYPRESS**, and that it will be the favorite wood for **GÜTTERS, RIDGES and BARS**, there can be no doubt. Reasonable in first cost, and extremely durable, it is now within the reach of every one to construct a durable house.

We had the pleasure of calling the attention of the S. A. F. to the merits of this wood at their first convention at Philadelphia. Since which our "**SPOT CLEAR BARS**" have had a large sale, and became favorably known to florists throughout the country. We have used this wood extensively for nine years, for various purposes requiring a durable wood, and it has given such universal satisfaction that we do not hesitate to recommend its use by florists and others. We are thoroughly posted as to the best varieties to use. We carry a large stock of dry lumber, and use clear material only. Correspondence solicited. Circulars and prices on application.

WROUGHT WELDED BOILERS

FOR GREENHOUSE HEATING.

THE "ALLERTON" BOILER.

SEVEN PATTERNS. 44 SIZES.

Our Wrought Welded Boilers are the most SIMPLE, RELIABLE and DUR-
ABLE Water Boilers in existence. The plates are solidly welded together, the
heads are welded into the shells and the flues welded into the heads, thus the entire
boiler is without Seams, Joints or Rivets. They will expand and contract without
any risk of fracture, and making them red hot will not cause leakage.Generally, and almost without exception, other boilers are over-rated from 30
to 50 per cent., while the rated capacity of our boilers is CONSIDERABLY
WITHIN their actual working power.

28 PRIZE MEDALS AWARDED DURING THE LAST 12 YEARS.

THE AMERICAN FLORIST

NURSEYRYMEN'S DEPARTMENT.

Vol. IV.

CHICAGO AND NEW YORK, AUGUST 15, 1888.

Supplement to No. 73.

THE AMERICAN FLORIST

Copyright, 1888, by American Florist Company
Entered as Second-class Mail matter.

Published on the 1st and 15th of each month by
THE AMERICAN FLORIST COMPANY.

GENERAL OFFICES, 54 La Salle Street, Chicago.
EASTERN OFFICE,
Room 15, Vanderbilt Building, New York.

All communications should be addressed to the
general office at Chicago.

THE AMERICAN ASSOCIATION OF NURSEYRYMEN.

GEORGE A. SWEET, Danville, N. Y., president;
G. J. CARPENTER, Fairbury, Neb., first vice-pres-
ident; CHARLES A. GREEN, Rochester, N. Y., sec-
retary; A. R. WHITNEY, Franklin Grove, Ill.,
treasurer. The next annual meeting at Chicago
the first week in June, 1889.

THE AMERICAN FLORIST has begun
the publication of this supplement for the
purpose of giving nurserymen a trade
medium such as the AMERICAN FLORIST
now is to the florists of the country. The
supplement will be published with each
issue during the months of August, Sep-
tember, October, January, February and
March. Appearing twice each month dur-
ing the heavy buying and selling seasons
it will prove a very valuable medium for
trade advertisements, surplus stock can
be readily brought to the attention of the
whole trade and much correspondence be
thereby avoided.

Current news and notes of interest to
the trade are solicited. This is intended
for a nurseryman's newspaper. If you
know of anything of interest to anybody
besides yourself, send it in.

AT DETROIT there was some talk of
chartering a steam boat at Chicago next
year and holding the meetings out in the
lake, in order to secure quiet and com-
fort. This may be a good scheme, but if
there should happen to be a sea running
—which sometimes happens even in
June—some of the essayists might be
obliged to insert painful pauses in their
delivery. Again a man does not present
a very imposing appearance holding to a
post with one hand and attempting to
read an essay held in the other. Even
Albough would quail before such an
ordeal. The lake will be there if wanted,
but we believe that nurserymen will have
better success planted on mother earth.

THE DETROIT CONVENTION.—The an-
nual report of the proceedings of the last
meeting of the American Association of
Nurserymen is now in press and may be
secured from Secretary Chas. A. Green,
Rochester, N. Y. Price \$2 a copy.

ROCHESTER, N. Y.—Mr. Chas. A.
Green and family are sojourning at Cha-
taqua, N. Y.

BONNER SPRINGS, KANS.—Business
has been excellent and we expect a great
increase as Kansas crops will be simply
immense. By all odds the largest crop
ever raised in the state, and to day in
best condition. You ought to see the
cornfields. It would do you good.

ADVERTISING RATES in the supple-
ment will be the same as in the body of
the paper, viz., 10 cents a line agate, 14
lines to the inch; discounts 3 months 5
per cent, 6 months 10 per cent. No
special position guaranteed nor reduc-
tion for large space.

OUR ADVERTISING RATES are so low
that you can publish lists of surplus stock
in the SUPPLEMENT for less than the
postage alone would cost you if you
should print and mail a list yourself to
5000 addresses. A full page for one in-
sertion costs only \$42, half page \$21, col-
umn \$14, half column \$7. We will print
additional copies from type after being
set at a nominal charge if you should
wish additional copies to enclose in let-
ters, etc.

RUSSIAN APPLES.—The report upon
the Russian orchard at the Experiment
Station of the College of Agriculture at
St Anthony's Park, Ramsey Co., Minn.,
in Bulletin No. 3 should be of consider-
able value to nurserymen. The table
shows the condition of the trees after the
last three winters, when the trees were
planted, number of trees originally
planted, number of trees now alive and
height of same. Both the Russian
names and the names as revised by the
committee of the American Pomological
society are given. The orchard was
planted in the spring of 1885, to demon-
strate how far the Russian apples are
adapted to the climate of Minnesota.
The same bulletin contains a very inter-
esting and instructive report upon the
condition of trees, shrubs and vines in
the nursery after the winter of '87-'88.

Notes From the "London Garden."

ELLA GORDON is a hybrid perpetual
rose of a bright crimson color, with the
shape somewhat of the noble Ulrich
Brunner. It is a large, well-built glob-
ular flower, the shell petals smooth and
with plenty of substance. Some half
standards of it are blooming freely in the
Waltham Cross Nursery.

DUCHESS OF ALBANY has strong rec-
ommendations. Imagine a full, large,
fragrant flower, much deeper in color
than the lovely La France, and then one
can form an idea of this new acquisition
of Messrs. Wm. Paul & Son. The
plant was seen to better advantage in the
intensely hot summer of 1887.

SILVER QUEEN we noticed at the Na-
tional rose show as a promising flower.
We could judge of it better at Waltham

Cross, where it is flowering freely. It is
a good companion to the variety Queen
of Queens, a delicate peach color, full,
large, and of excellent globular shape.
In a better season than this its fullness
and fine character would be brought out
more clearly.

EARL OF DUFFERIN (Dickson, 1887).—
A fine bloom of this splendid dark rose
was exhibited in one of the prize-winning
seventy twos staged in the championship
class at the Crystal Palace on the 7th
inst. That so new a rose should be at
once occupying a position in such com-
pany is good evidence of the beauty of
its blooms, and the plant is certainly a
very vigorous grower.

ROSE MRS. JOHN LAING, a seedling
from Francois Michelon, and with which
the raiser, Mr. H. Bennett, of Shepperton,
won the gold medal in 1885, was
shown splendidly this year at the Crystal
Palace. It is of a charming rose tint,
something like that of Mme Gabriel
Luizet, the flowers large and finely
shaped, and possessing all the qualifica-
tions of a first class exhibition rose. The
excellent stand of twelve blooms from
Messrs. Paul, of Cheshunt, gave rosarians
a good idea of its worth.

ROSE GRAND MOGUL.—In this season
of dark colored roses this variety has
proved its extreme value for the garden.
In the nursery of Messrs. Paul & Son,
Waltham Cross, there is a large batch of
it full of flower and in vigorous growth.
It is a seedling from A. K. Williams, and
has the same deep crimson ground color,
but this is shaded with almost black and
scarlet, a brilliant blending of dark colors.
It has also an admirable form, full, sym-
metrical and large, though finely finished
such as to raise it amongst the best of
exhibition roses. It was well represented
at the National Rose Society's exhibition.

CLEMATIS.

S. A. F. at New York.

In considering the fourth annual meeting of American Florists at New York, he who has been a close observer of its beginning and growth is tempted to say, verily "nothing succeeds like success." The attendance and membership of scores who represent only kindred interests of the florist verifies the above axiom and shows in no uncertain light the fact that attendance at these annual meetings is necessary to every one whose vocation touches that of the grower of flowers. The remarkable yet steady growth has continued even beyond the large attendance at Chicago and with the close of these sessions Secretary Stewart claims an active membership of over twelve hundred. Of interesting matters given consideration it cannot be denied that our executive committee has given us the best programme ever furnished, and the subsequent careful attention of the secretary has insured the presentation of all these subjects by the essayists chosen and the regular order of the same maintained; a most desirable end never so well accomplished. The result has been a meeting creditable to our highest aims. No little credit is due the New York Club in leaving entirely free our working days and thus securing a good attendance, though they were seriously handicapped by lack of suitable central halls and hotels.

And has any one whispered, "Will it last?" Is there no fatal blight on the leaf or deadly rot at the root of this fair flower? Let us hope and believe not. With a central city like Buffalo for our meeting in 1889 and a worker like Mr. John N. May as president, may we not safely predict a further strong growth of this favorite American plant.

Our columns give a general account of the transactions which will be supplemented in greater detail in future issues.

The Hail Insurance Association.

The second annual meeting was called to order at 4:30 p. m., August 22, in the convention hall. Secretary Esler's report showed a membership of over 100, with over 900,000 square feet of glass in-

sured. Two losses have been paid the past year and \$800 remain in the hands of the treasurer.

Following the discussion of the report new members were admitted representing over 300,000 square feet of glass, and Secretary Esler feels confident that he will take double that amount before the meeting closes. The following were elected directors for the ensuing year: J. M. Jordan, Edwin Lonsdale, J. C. Vaughan, J. D. Carmody, Peter Henderson, B. F. Dorrance and James Horan. Former officers of the company were re-elected, and Secretary Esler's efficient work highly commended. The experiment can not now fail of a thorough trial and will show a great gain the coming year, as the general sentiment is now certainly strongly in favor of the movement.

The New York Convention.

FIRST DAY.

With enthusiasm undampened by a drizzling rain some 800 members of the Society of American Florists were assembled in Cooper Union at the opening of the fourth annual meeting, Tuesday, August 21.

Mr. John N. May's hearty address of welcome was responded to on behalf of the society by Hon. C. C. Cole, Des Moines, Iowa, in a manner which left no room for criticism and which further endeared him to all.

Then followed President Hill's address, which will be found in full in another column.

A large flag bearing the national colors and the name of the society was presented to the society by Mr. Wm. Elliott, on behalf of the New York Florist Club, which was accepted by President Hill for the society. Mr. J. D. Carmody, Evansville, Ind., declared that the flag was incomplete without a blossom of some kind upon it, and suggested that the society at a later time should decide upon a flower to be known as the national flower and have the same painted upon the national colors just presented.

Secretary Stewart's report showed that the membership roll now contained about 1,000 names, and that seven deaths of members had occurred. Treasurer Hunt reported that expenses of over \$1,400 had been paid during the year, leaving a small balance in the treasury.

A recommendation from the executive committee that the annual dues be raised to \$3 was met by a resolution covering the recommendation for action before adjournment. A further provision regarding dues was that if the annual dues were not paid within eighteen months after notification by the secretary the name of the delinquent should be dropped from the membership list.

Mr. J. N. May spoke on the question of substitution and asked that the sum of \$200 be devoted to defray the expense of a thorough investigation of complaints and to suppress this blot upon the trade.

In the discussion of the president's address Mr. Calder, of Boston, thought that it was complete and needed no discussion. Mr. Cole, of Des Moines, Ia., believed that the necessity for a scientific education as expressed in the address was not so urgent as was there implied. He would rather have the practical experience of actual working florists than the most elaborate chemical analysis. Mr. Peter Henderson expressed the view that as far as a scientific education was concerned, life is too short to acquire it. He considered the majority of the professors who are the heads of agricultural colleges to be inexperienced and incompetent, and that a boy with a few years practical experience could beat them out of their boots in securing paying results.

"The Elevation of Our Business," an essay by H. H. Battles, of Philadelphia, was read in his absence by Mr. C. F. Evans. As we shall print the essay in full a synopsis will not be necessary here. Mr. C. D. Ball's essay on "Ferns, Palms and other Decorative Plants," was also very instructive and will appear in another issue. The essay was discussed by Messrs. Harris, Craig, Taylor and others, and a vote of thanks was tendered to the essayist.

"What benefit is derived from a scientific education" was ably answered by Mr. A. E. Whittle, Albany, N. Y., who convinced all that if a young man desired to reach the upper rounds in the profession, he must have a scientific education in so far as science was applied to horticulture and have the ability to make a practical application of it to his business.

As to the sale of chrysanthemums being an injury to the general cut flower trade, Mr. J. M. Jordan stated in substance that he did not believe such was the case. Regarding their being an injury to the sale of roses during the chrysanthemum season he related how he had been unable to secure enough first class roses at that time to supply the demand for the same, though the market was at the time heavily stocked with chrysanthemum bloom. Other questions were answered by those to whom they had been assigned with the exception of a number which had been assigned to gentlemen who were absent. These were set for a later time.

SECOND DAY.

The programme was changed and the nomination of officers set for 12 o'clock and some of the questions omitted from the first day were answered. Regarding the advisability of having a wholesale market for the sale of cut flowers in our large cities, Mr. J. C. Vaughan stated

that it depended largely upon the local needs. He mentioned the markets of London and Paris as the only successful ones.

A report from a committee recommending a style of rim pot to be used as a standard pattern and to request all potters to conform to it and manufacture in uniform sizes was received after considerable discussion as to the pattern recommended by the committee. In the discussion Mr. James Hendrick created much merriment by remarking: "unless we succeed in securing more uniformity than now exists, we may all go to pot."

The question of increasing the annual dues to \$3 was again taken up and after considerable discussion the resolution was adopted.

Mr. Thomas Cartledge's essay on "Roses from the retailers' standpoint," was well received. He expatiated on the importance of long stems, cutting and packing, and told of the increased sales due to care in these details. In the afternoon Mr. Edwin Lonsdale treated the same subject from the growers' standpoint. The evening was again devoted to the question box.

THIRD DAY.

Officers for the ensuing year were elected as follows: Jno. N. May, Summit, N. J., president; W. J. Palmer, Buffalo, N. Y., vice president; Wm. J. Stewart, Boston, Mass., secretary; M. A. Hunt, Terre Haute, Ind., treasurer. Buffalo, N. Y., was decided upon as the place for the next annual convention.

Mr. J. D. Carmody, Evansville, Ind., offered a resolution recommending that a committee of five be appointed to devise means to protect the members of the society from the frauds who purchase on credit and fail to pay their bills and that the committee be composed of men who had been victimized. The resolution was adopted and the chair appointed Messrs. J. C. Vaughan, Chicago, M. A. Hunt, Terre Haute, Ind., Robt. J. Halliday, Baltimore, Robert Craig, Philadelphia, and W. C. Wilson, Astoria, N. Y., as the committee.

"What can this society do to encourage the study of systematic botany?" was a question referred to the Hon. Wm. R. Smith, Washington, who replied that while a knowledge of elementary botany was desirable he did not see where very great advantage would accrue to the florist from its study. He related how a very distinguished botanist had called upon him and referring to the plants in the houses had asked: "Well! How is your truck getting along?" Mr. Peter Henderson believed that a study of botany was a great help to the florist and offered a prize of \$100 for the best herbarium of native plants, not less than 500 species, arranged in their natural orders, the plants to be gathered between now and the next annual meeting, and the competition to be confined to members of the society. He offered the prize knowing that the best knowledge of systematic botany was obtained through the work of collecting and arranging such an herbarium.

Mr. John Thorpe was here introduced and enthusiastically received. He withdrew after making a few remarks. A vote of thanks was tendered him by a unanimous vote for his able conduct of the exhibition.

In the absence of Mr. J. H. Taylor the programme was changed and Mr. Robt. J. Halliday of Baltimore read his essay on "Nomenclature," which can not be too highly praised. He covered the

many abuses in the naming and renaming of plants and whipped the dust from a good many floricultural skeletons. He raised his voice for fewer names and more distinct kinds. He related how Heliotrope Mme. Blonay had been renamed "White Wreath" by an American firm who sold some plants to Henry Cannell, of England, who was so disgusted that he sent it back to them at a higher price under the name of "White Lady." He mentioned the case of the rose Boule de Nieve, which had been placed on the market here under the name of Ball of Snow, a literal translation of the name, but tending to confusion. He mentioned numerous other cases such as the geranium "White Sevan," the "Siberian lily and the ipomaeas." He closed with a resolution recommending that a committee of twelve be appointed to revise the names now in use and pass upon new ones, and that nine of the committee must concur to render a decision. After some discussion the resolution was adopted with an amendment that Mr. Halliday be chairman of the committee. A vote of thanks to the essayist was unanimously carried.

Mr. Antoine Wintzer, West Grove, Pa., wished to know what could be done regarding French roses sent out as new, but which were identical with old varieties, and mentioned an alleged new one which he had found to be identical with Appoline.

In response to a query Mr. Peter Henderson expressed the belief that the "Excelsior Pearl" tuberose was simply the well known "Pearl," and nothing else. Regarding the rose Boule de Nieve which he had sold as "Ball of Snow," Mr. Henderson regretted that in cataloguing it under this name he had not placed the original French name of "Boule de Nieve" after it in brackets.

At the afternoon session the essay by Mr. J. H. Taylor on "Soils and Fertilizers," was read, a very able paper from a practical as well as scientific standpoint. This was followed by Mr. J. D. Reynolds' essay on "Modes of Heating, and their relative cost of construction and operation." The essayist leaned strongly to steam except for very small places, or those where a boiler pit of considerable depth could not be had. Further notice of these papers will be taken later.

The evening session was devoted to the question box with excellent results. As a general rule the discussion was freer upon the items taken from the question box than upon the essays read. All of the essays were of unquestionable value and all will be quoted from or given in full in subsequent issues.

The printed report containing all the essays with the discussions on each may be secured by becoming a member of the society. Extra copies may be secured by members only at a cost of \$1 per copy.

NOTES.

Hail insurance has had a very considerable boom.

It is much to be regretted that there was not a "Lynching" at Iona Island Friday. The score of the ball game at Iona Island was 14 to 4 in favor of the New Yorkers.

Peter Henderson & Co made a beautiful exhibit of cut gladioli at their store during the convention.

None can withstand Mr. Robert Craig's logic, especially in regard to the advantage of a uniform size of pot.

Who would have thought that so much discussion could have been had as to the

advantage or disadvantage of pots with rims?

Reed & Keller, New York, originated the funeral design entitled "Immortality," described in our account of the exhibition.

August Rolker & Sons made a handsome display of florists' supplies at their store on Dey street, in addition to that at Nilsson Hall.

At Ed. Jansen's dinner on Wednesday everything was served in baskets; even the punch bowls were set in baskets made for the purpose.

While headquarters were officially at the Fifth Avenue Hotel, the largest crowd of florists was to be found registered at the Morton House.

Robert Craig puts the average life of a flower pot as used at most commercial places at 4½ years. Here is a point in estimating the cost of production of plants.

When the flag was presented the band struck up the "Star Spangled Banner," and one member asked "what tune is it they are playing now?" There is still work for the society.

Mr. John Thorpe is entitled to great credit for the able manner in which he handled the details of the exhibition. All the exhibitors were much pleased with his management.

Ed Jansen, the basket manufacturer, fed some 600 delegates at his warerooms, the second day. He had his stock of novelties very handsomely arranged for inspection, but would take no orders.

Brastus Wyman, Esq., a Staten Island amateur, presented to the ladies of the convention and their escorts 250 tickets to Kiralfy's "Nero; or the Fall of Rome," at Staten Island for Wednesday evening.

Mr. Evans thought that dealers would object to rim pots because they would not set well into a pot cover, but Mr. Parson thought store keepers wouldn't kick on that account as he had found them very decent sort of people to get along with.

Mr. J. M. Jordan, of St. Louis, seemed to think that the size of the pot did not always govern the size of the plant as he had ordered plants in 4-inch pots, which when received looked as though they had been shifted from 3-inch pots after the order was received.

One of the daily papers told how Mr. Asmus secured his pyramid of blooming lily of the valley for an August exhibition. According to the reporter the plants were forced into bloom last March and kept in perfect condition in an ice box till placed in the exhibition hall August 20. Mr. Asmus should tell us all about this new method of handling lily of the valley.

Secretary Stewart was called away the evening of the first day by a telegram conveying the sad news that his brother was very low with typhoid fever at Denver, where he had been taken down while returning from a pleasure trip to California. A later telegram brought more hopeful news and a dispatch was sent to intercept Mr. Stewart, who had taken the fast train for Denver.

Floral Decoration for the Casket of the President of the Arion Society N. Y.

The sides of the coffin were covered with roses and the top with Lilium longiflorum, roses and spirea. A coil of smilax and deep red roses was made around the head of the casket. This was an elegant style of finish. Plants of hydrangea surrounded the casket. Palms were on the platform and two serpent lyres. Hanft Bros. made this rich arrangement.

FLORAL DECORATIONS FOR THE CASKET OF THE PRESIDENT OF THE ARION SOCIETY, NEW YORK

President's Address.

LADIES AND GENTLEMEN:—We enter upon the pleasant duty of opening the proceedings of this, the fourth annual meeting of the Society of American Florists. It is a sure augury of success when we see evinced such interest and so marked a determination to make the present meeting of real benefit to all classes in attendance.

We meet to consult, to exchange ideas, to compare experiences, to "learn wisdom," if I may so put it. To further this end, it may not be amiss for your presiding officer to call attention to some few things which seem to him worthy of your thoughtful consideration. Probably three-fourths of the gentlemen assembled are either plant growers or growers of cut flowers, or of both combined. It is recognized that the success of the profession rests in a large measure upon these men. My first suggestion shall be directed to this class in our society, of which I am one.

It should constantly be our study to broaden and deepen the lines of our practical knowledge of the things pertaining to the growth and culture of plants. We have learned much and have made commendable progress in the art of growing plants and of producing bloom in the last few years; and the years since the formation of this society have witnessed a marked and definite change for the better in plant growing. It is freely granted that the knowledge imparted at these annual gatherings has been an important factor in this advanced culture. The intelligence and energy that has wrought so well, what could it not have accomplished had it been better trained and more enlightened?

Fellow members, what we need, and what our profession demands, is a training school for our children and the young men who are to follow in our footsteps, where shall be taught a scientific and technical knowledge of the things pertaining to plant life, and plant growth, in their relations to soil, and heat, and

water. Our need, and the need of the young men who are to follow, is such an education as will enable us to analyze soils, and to know scientifically their constituent parts, and their relation to the fibre and tissue of a plant; to be able to detect deleterious and injurious substances, to check and control the chemical action in soils, to adjust to a nicety the things termed heat, food and water. Our most successful men are often confounded and amazed at their own failures, and can seldom assign an intelligent reason for the same. Often in the same house, under apparently similar conditions, with the same kind of soil, failure attends where in former years was had abundant success. Instances of the kind abound on every hand, and we are all familiar with them. This need not be, for with a right education and proper training—such as I hope awaits the young men of the future—these problems so serious and difficult to ourselves will to them disappear as the dew before the morning sun. This knowledge, so

desirable and important, can only be imparted by specialists and teachers devoted to such work. If we would have our profession keep pace with the industrial and material development of our country, it is incumbent upon us to dig deep and lay wide the foundations on which the future of our profession is to rest. Industrial and scientific education is making remarkable progress the world over, and we, who have the good of the profession at heart, must see to it that it is kept abreast of the times. With all our boasted achievements in plant growing and flower production, the fact remains that it has been wrought out by an enormous waste of time and physical force. How to correct this, by what means, is the question uppermost in the minds of many thoughtful florists.

Mr. Thorpe, in his address to you at Philadelphia, expressed a desire that at no distant date there might be established a National Experimental Garden; if to that could be united a school for the special training of persons for our vocation, where a practical and scientific education would be imparted, such an institution would prove of incalculable benefit to every member of the trade.

A profession that would win for itself esteem and position must show that it has some inherent claim upon its countrymen to be thus honored. In no way can this esteem be won by us better than by the production of new forms, new colors, and more beautiful flowers than those we already possess. If we would keep pace with the material development that is in progress we must, with more zest and greater zeal, apply ourselves to raising these new forms of plant life. Essays have been written, much valuable information has been given, and yet, comparatively speaking, we, as a profession (with one or two notable exceptions), have accomplished but little in this advanced line. Our most noted additions have come to us in the form of sports from varieties already in cultivation.

Pecuniary consideration, if nothing else, should stimulate to action in this line, for there can be no question but that novelties of real merit will always be heartily welcomed and well paid for, both by the trade and by the amateur flower grower, especially when they run in the popular line of roses, chrysanthemums, geraniums, etc. We spend large sums annually in foreign lands for the product of the hybridizer and the specialist. I have only words of commendation for so doing; but if we would only study the economic principle involved, it would provide us an additional incentive for action in this department of our work. Would it not be well for this society to offer liberal prizes for new plants of American origin, in order to stimulate and encourage efforts of this character?

Among the large membership of this society there are necessarily kindred interests, that are yet in a measure distinct, one from the other: We have the growers, both wholesale and retail, the men who sell by catalogue; the florist-supply men; the wholesale and retail dealers in cut flowers; the gardeners; and the employees of all the classes mentioned above, these are all eligible to membership, and each class has a right to insist on a proper and equitable representation in the executive board and to the offices of this society. If the larger growers have seemed to occupy too prominent a place in the management of the society's affairs, it has come not by design but rather by the force of circumstances. Complaint has been made that the retail

florists have not had proper recognition. Whether the charge be true or not, the fact remains that it is not through any wilful action on the part of the promoters of this society. It would be well for us to so arrange the management of this society as that all affiliated interests shall have due consideration and proper representation.

Untold good can be rendered by a free and cordial exchange of views regarding the use and abuse of the credit system as it now prevails among us. This is an important and somewhat delicate subject for us to discuss, but it is of such moment as to demand consideration at our hands. Kindred associations have their protective unions for preventing the dishonest from imposing upon the unsuspecting; this is accomplished by publishing, under judicious limitation, the financial standing, liability and integrity of its members and their patrons as furnished by those having commercial transactions. The organization of such an auxiliary is, perhaps, open to criticism, liable at times to do injustice to worthy and deserving men who have been unfortunate, but still deserving consideration. The ledgers of many of the gentlemen present to-day could testify to the need of some measure of relief being adopted by the society. I might suggest that it be made the province of the society, through the medium of the secretary, to post, on information furnished by reputable members, dishonest and unreliable men whether they be members or not. It certainly is and should be the duty of the officers of this society to drop from membership, on a written complaint of a given number, men who persistently refuse to honor their just obligations.

Those desiring the good of the profession, and who have its welfare at heart, have entered solemn protest against the dissemination of plants under false names. This abuse, which has grown out of avarice and a lack of moral principle, must be checked. We must not, we can not afford to pass this matter by; the fact remains that the most unblushing frauds have been perpetrated on an unsuspecting and over-confident public. Commercial probity, uprightness in our dealings with the patrons of floriculture, is one of the things this society must insist upon, until this blight which has fastened itself upon one of the noblest callings in the land is eliminated and destroyed. Great good has accompanied the utterances and action of this society taken at its former meetings. There must be no uncertain sound issue from this body of men on this particular subject.

The renaming of plants must not be overlooked. We must hold inviolate and sacred the right of any man or woman to name the plant through whose skill, patience, and care it has been produced; and not only that, but we must by the moral force of this society, render secure his or her right and title in the same forever. No one has the right, either through caprice or malice, to change or attach any other name save that given it by its disseminator.

Another suggestion in connection with this subject may with propriety be referred to. Where the translated name from a foreign tongue is used, the original should follow in parenthesis. I question the expediency of using translations, but if it must be done, it is only right and proper that the original shall follow. To do this will certainly allay suspicion, and would prevent the unsuspecting from making duplicate purchases.

As a society we must set our faces resolutely against any practice that shall tend to destroy the dignity, or that may reflect dishonor upon the profession. If we shall refuse to act on these moral questions that confront us, then, as a society, we are doomed, and we shall deserve no better fate. In the progress which this profession shall make in the next generation, our present attainments will probably seem insignificant. Be that as it may, we want posterity to say of us in the language of the prophet of old—if they can say nothing else—"These were honorable men in their day and generation."

I would recommend that this society, through its officers and executive board, administer directly the affairs of what is known as the Hail Protection Society. This action is recommended by Mr. Jordan, the president of the Hail Insurance Company, and also by other prominent members. If this were done, it would obviate the necessity of a distinct organization, such as now exists. This step is urged that expenses may be reduced and that its affairs may be better understood by the members of this society. The organization of our national society was based upon the principle of furnishing insurance to its members against losses by hail. It is the opinion of your executive that greater confidence would be had were this matter an integral part of the organization. The hail insurance plan as adopted at Philadelphia has passed beyond the experimental stage, and it affords a reliable and practical solution of this whole question. The forthcoming report of Mr. Esler will set at rest any misgivings regarding the financial standing of this "foster child."

It is a well-known axiom that in "union there is strength." Let us by our efforts seek to unite for our common good all the forces and interests that are represented in our membership. The divine law indicates that we are made to co-operate together and thus to be helpful one to the other. The value and need of associated effort is recognized in all professions and in all lines of trade, and none need it more than we do as a profession. Associated effort incites our aspirations; begets fellowship; promotes harmony; destroys ignorance; removes differences; prevents misunderstandings; encourages trade. These are some of the fruits of thus associating together. Then let us this morning renew our fealty to this organization and seek anew to extend its usefulness.

Associated effort should be put forth to encourage exhibitions, which are potent factors in educating the public mind and which excite an interest in nature's beauties. Time spent in arranging these flower shows is time well spent, and we hope to hear of them in every town in the Union and in Canada. The formation of Florists' Clubs at the trade centers is of inestimable value to every member of such club, doing away largely with trade jealousies and bringing the profession more prominently before the public. We hope to hear of many new organizations of this character, and also of the conserving and building up of those already in operation.

AUGUSTA, GA.—The Augusta National Exposition, 1888, opens October 10 and closes November 17. In the division of plants and flowers classes are provided for amateurs and for professional florists. In addition to the regular premiums, \$50 in specials is offered by P. J. Berckmans of this city.

INTERIOR VIEW OF NILSSON HALL, NEW YORK, DURING CONVENTION

The Exhibition.

Not the least interesting feature of the convention was the exhibition in Nilsson Hall. Every foot of space was utilized and neither quantity nor variety were wanting. Following is a list of the exhibits:

M. M. Baversdorfer & Co., Philadelphia—a large display of baskets and general florists' supplies.

W. C. Krick, Brooklyn, N. Y.—Immortelle letters and monograms.

Wilhelmi's Basket Works, New York—baskets and supplies.

N. Steffins, New York—florists' wire work of all descriptions.

Wm. H. Koehler, Philadelphia—stuffed white doves, a large and very attractively arranged exhibit.

J. C. Vaughan, Chicago—bulbs, tools and florists' supplies.

Read & Keller, New York—florists' wire work, a large exhibit including a number of novel designs.

F. E. McAllister, New York—a large and very complete collection of florists' supplies and bulbs.

Philadelphia Immortelle Design Co., Philadelphia—a large show of immortelle designs, wheat sheaves and artificial flowers.

C. H. Joosten, New York—Dutch bulbs and Michel's seed tester.

J. A. DeVeer, New York—bulbs and florists' supplies.

August Rolker & Sons, New York—novelties in florists' supplies including wreaths of metal flowers.

C. S. Ford, Jr., Philadelphia—immortelle letters and monograms.

V. H. Hallock & Son, Queens, N. Y.—a large exhibit of cut gladioli blooms, including the new Argenteum type, a cross between the Gandavensis hybrids and Saundersonii, with remarkably large flowers and strong habit of growth, also a new pure white which will be introduced next year and of which they are working up a large stock.

Marschuetz & Bacharach, Philadelphia—a large display of baskets and supplies.

Geo. W. Childs, Esq., Philadelphia—a

dozen magnificent plants of fancy caladiums of remarkable size and beauty.

J. A. Penman, New York—copies of the "Dictionary of Gardening."

Jas. Vick, Rochester, N. Y.—a grand show of gladioli blooms.

Sam'l. C. Moon, Morrisville, Pa.—cut gladioli and young evergreens.

Wm. S. Kimball, Esq., Rochester, N. Y.—cut blooms of orchids, nymphæas and velumbiums. A most beautiful and interesting exhibit. The orchids in great variety for the season.

Kemble Floral and Seed Co., Oskaloosa, Ia.—appliance for watering plants.

Jno. Schmidt, Rochester, N. Y.—flower pots.

Peter Henderson & Co., New York—cut blooms of roses, new French cannas of large size and good colors, double and single petunias and geraniums.

F. R. Pierson, Tarrytown, N. Y.—seedling geranium.

A. B. Howard, Belchertown, Mass.—cut blooms of verbenas.

Jno. Henderson, Flushing, N. Y.—some excellent cut blooms of roses of standard sorts.

Jno. N. May, Summit, N. J.—some fine cut blooms of roses, usual forcing varieties.

Ernest Asmus, West Hoboken, N. J.—pot lilacs in full bloom and a huge pyramid of blooming lily of the valley, a grand exposition of the florists' art in forcing flowers out of season.

John Fime, New York—an excellent display of decorative plants.

W. C. Wilson, Astoria, N. Y.—orchids and decorative plants.

J. L. Lockwood, Stamford, Conn.—geranium, a sport from Mme. Sallerol.

Chas. Hurn, gardener to Mrs. W. Adams, Scarsdale, N. Y.—three magnificent bunches of Black Hamburgh grapes.

T. Griffin, gardener to Alfred Lully, Esq., Hackettstown, N. J.—three grand bunches of Muscat of Alexandria and three of white Tokay grapes.

Geo. Grant, gardener to Mrs. M. A. Osborn, Mansroteck, N. Y.—two immense bunches of Muscat of Alexandria

and two wonderfully large bunches of Barbarossa grapes.

John G. Gardner, Jobstown, N. J.—blooming heaths and specimens of the "Lorillard" forcing tomato, very smooth and handsome.

Jno. H. Taylor, Bayside, N. Y.—cut blooms of roses including Mme. Watteville and Cusin.

W. A. Bock, N. Cambridge, Mass.—new bouvardias.

H. A. Dreer, Philadelphia—cut blooms of petunias, gloxinias and verbenas, and young plants of ferns and palms.

Geo. Krick, Elmont, N. Y.—new carnation "Elmont," light crimson in color and robust habit.

Jacob C. Cassell, Philadelphia—terracotta ware for florists.

Lockland Lumber Co., Lockland, O.—cypress sash bars and gutters.

H. W. Hales, Ridgewood, N. J.—mole trap.

James Dean, Bay Ridge, N. Y.—hose coupling.

R. F. Lawrence, Buffalo, N. Y.—bouquet holder.

N. J. Hayes, New Haven, Conn.—wire for florists.

J. M. Young & Co., New York—Jardinieres and flower vases in Leeds babotine and clouded gold.

M. Goldman, Pittsfield, Mass.—Goldman's atomizers.

H. S. Miller & Co., Newark, N. J.—fertilizers.

Whilldin Pottery Co., Philadelphia—flowers pots in all sizes from thumbs up to two feet in diameter.

Rose Manufacturing Co., New York—tobacco insecticide soap.

Jules Jugl, Brooklyn, N. Y.—wooden hose menders.

J. M. Gasser, Cleveland, O.—patent glazing points and crude oil burner.

J. Horace McFarland, Harrisburg, Pa.—specimens of printing for florists.

Beatty & Vatteler, New York—specimens of lithographs of floral subjects.

L. B. Brague, Hinsdale, Mass.—cut hardy ferns, bouquet green, wreathing, mosses and Christmas trees.

J. D. Carmody, Evansville, Ind.—model of the Carmody hot water heater.

A. H. Hews & Co., North Cambridge, Mass.—flower pots in all shapes and sizes, also vases and window boxes.

John A. Scollay, Brooklyn, N. Y.—hot water boiler, plant sprinklers and putty bulbs for glazing.

Quaker City Machine Works, Richmond, Ind.—the Evans Challenge ventilating apparatus.

J. H. Ives, Danbury, Conn.—machine for applying putty.

Hitchings & Co., New York—the Hitchings hot water boilers and ventilating apparatus.

Wm. H. Diven, Laurel, Md.—ventilating apparatus.

Richardson & Boynton, New York—the "Perfect" hot water heater.

Herendeen Manufacturing Co., Geneva N. Y.—the Fuhrman steam heater.

E. Hippard, Youngstown, O.—ventilating apparatus.

Robt. C. Reeves & Co., New York—machine for cutting sod.

Thos. W. Weathered, New York—the Weathered hot water boiler.

In addition to these exhibits at the hall Ed Jansen and August Rolker & Sons turned their stores into special exhibition halls and were visited by large numbers.

THE FLORAL DESIGNS.

The premiums offered by the New York Florists' Club, being \$50 each for "best original floral design," "best fun-

eral design," "best dinner table decoration," and \$25 for "best bridal bouquet," were all won by C. F. Klunder, of New York.

Mr. Klunder's entry for "original floral design," was a large, low, round basket with very high handle, containing a mass of adiantum ferns into which were set three sun-hats, one containing long-florum lilies and lily of the valley, another pink hydrangeas and Watteville roses while the third held blue hydrangeas and Perle roses with a variety of orchids. From the center rose a handsome bunch of long-stemmed American Beauty roses, and a beautiful spray of orchids was tied to the handle with a large bow of very wide white ribbon. The piece was very handsome. Among the other entries worthy of notice were an elaborate design representing a pair of scales arranged by A. Le Moulit, and a design by James Weir & Son which bore the inscription "Immortality"; from a base of ferns rose a frame supporting first a caterpillar of white carnations, above which appeared a cocoon of crimson carnations while at top was a butterfly of roses, ferns, orchids and auratum lilies being used with effect at the sides and on the base.

The funeral design which received first prize was a large crown of white roses on a base of ferns and roses with a pair of cypress leaves crossed in front and tied with very wide cream colored ribbon. The other entries were an anchor fashioned after the modern all iron anchor rather than the form usually followed by the designer, and a design apparently intended to represent golden steps leading to a gates ajar at top, immortelles and Cape flowers were however very freely used in the latter.

The center piece of the prize dinner table decoration was a low round basket of the yellow blooms of Allamanda Schottii interspersed with adiantum ferns. The favors were a dozen Perle roses held in very small straw bonnets tied with pale yellow ribbon on which appeared in raised letters the name of the lady who was to occupy the seat at which the favor was placed, while the gentlemen's names were stamped in gilt on a leaf of the single Perle rose provided for them. Another entry was a very handsome plateau of ferns and small palms with a block of American Beauty roses placed at each end. This was much admired and would undoubtedly have received first prize had the awarding committee felt that it could be admitted as a "table decoration," rather than simply a center piece.

There was but one entry for bridal bouquet. The one entered was composed of lily of the valley with a mass of orchids in the center, much like the one illustrated in a recent issue of the FLORIST. The handle was tied with wide cream colored ribbon.

THE RIVER PIRATES who so outrageously swindled the New York committee on their bill of fare and then robbed them under threat of not landing passengers should have been thrown overboard. A committee of safety could have been organized in fifteen minutes who would have done the job effectually. If our members in whose state such a swindle was perpetrated do not seek redress in the courts then we mourn their lack of spirit or lack of faith in the law of the land, for no clearer case of highway robbery was ever seen in our wildest west on coach or train. This in no manner reflects on the New York club, its com-

mittees or members, but is our view of the swindle perpetrated upon them and the call for prosecution.

The Trip From the West.

The Chicago Club, with a number from various western points, who had centered at Chicago to go with them, left that city at 3 p. m. August 19.

A number of members came to the depot with a large quantity of flowers with which to decorate the cars, but the train pulled out before their labors were half completed. One car in which they had a fair start looked very flowery. The rods on which the curtains to the berths are hung were covered with gladioli with bunches of asters at intervals. The bell cord was twined with smilax and asters, but the decorations on the cord had a sad accident. One of the train men in another car gave the cord a jerk and away went the decorations. The dining car was late and appetites were sharp when it was finally coupled on.

At Niagara Falls, which was reached at about 9:45 a. m., breakfast was secured by waiting in a restaurant for an hour or so and the men who "swindle" people by charging "\$5 for a little basket of flowers," went out and fell into the hands of the Niagara Falls pirates, who know more about swindling in five minutes than the average florist does in a life time. But every one enjoyed themselves and those who had never before seen the Falls made the usual exclamations. The rapids and the whirlpool were visited and the places where lives had been lost in foolhardy attempts to swim the rapids, the place where the honest and conscientious hackman had refused to accept more than \$5 for driving around the block, as well as numerous other places of lesser interest were pointed out by the gentle natives at a cost of 50 cents per point for each person in the party. One small boy pointed out an object at a cost of only 10 cents for a party of four, but on account of his extreme youth and evident inexperience he was forgiven.

New York was reached in a drizzling rain and at the ferry the spirits of the party were considerably dampened as well as their wearing apparel, but the meeting of old friends and the forming of new acquaintances on arrival soon occupied the minds of all and the trip was declared a most enjoyable one.

NOTES.

Flint Kennicott donated the flowers to decorate the cars.

John Lane and Chas. E. Hay, the two "amateur florists," were friends at once.

The Milwaukee crowd saw fit to flock all alone by itself and came by another route.

The large number of ladies along kept the boys very sedate. They were jolly but never boisterous.

It is worth \$2.87 to see George Miller get into an upper berth. He disdains the steps and makes it in one grand leap.

Both Hartwig and Gallagher stayed at home. It is rumored that they wanted an upper berth together but had to give it up as they could get no one to take the lower berth.

A rate of one fare for the round trip was secured in spite of the refusal of the Trunk Line Association to make any concession. The look of glad surprise which spread over the ticket buyer's face when he was informed of the last reduction was worth framing, but it was different when the cost of the sleepers was pro-rated.

Aug. S. Swanson was the only Minnesota man aboard. Wm. Clark, of Colorado Springs, represented Colorado, A. Donaghue and wife, of Omaha, Nebraska; L. A. Casper and wife, of Council Bluffs, H. G. Higley and wife, of Cedar Rapids, J. T. Temple, Davenport, and J. C. Renison, of Sioux City, Iowa; E. Haeutze and wife, of Fond du Lac, Wisconsin, R. S. Brown and wife, of Kansas City, Missouri; and H. L. Phelps and Chas. E. Hay, of Springfield, Illinois, other than Chicago.

Our Home Cut Flower Market, as Viewed by the Retail Dealer.

BY F. F. BENTHEY.

[Read before the Chicago Florists' Club July 26.]

In producing cut blooms for market there are two things the grower aims at; quality and quantity; both very desirable if they can be had together, but the great trouble is that too often quantity is produced at the expense of quality.

There was a time some years ago that everything in the shape of a flower could be sold readily at good prices. The grower of inferior stock had rather the advantage in those days; his stuff brought the same price as that of his neighbor who prided himself on producing a superior grade of flowers. Many a grower was heard to make the remark: "What is the use of producing a first class article if it does not command a better price than a poor one." To any intelligent observer it is apparent that the aspect of the flower trade is radically changed and still is changing every year as the art of gardening advances, and the public taste for flowers is educated. The highest standard of excellence is what the market demands and what every grower will do well to remember.

The time has passed when the grower could dump his box on the florists' counter and just hand in his little bill. The latter is now apt to look the stock over and if he finds it unsatisfactory he quietly informs his man that he has no use for second class stuff. This proceeding when first practiced was a stunner to our friend the grower; he could not see any use in being so very particular. But I am happy to say that the wide awake gardener soon "tumbled to the racket," as the boys would say; he began to pay more attention to the quality of his stock. Not satisfied with this alone he also gave his attention to marketing his flowers in a careful and attractive way, which is almost as important as to produce them. A fact which many a gardener would do well to paste in his hat.

In packing his stock he first sorts it over carefully, throwing out all culls as useless, well knowing that by mixing in a half dozen poor blossoms in a lot of fifty it injures the sale of the whole lot. This certainly is a step in the right direction, it is only to be deplored that the number of this class of growers is sadly in the minority.

That a better quality of stock is required to satisfy the flower buying public of to day than of ten years ago, no one will doubt. I am not here to-night to tell you how to manage your establishments to produce these flowers; every one of you probably know more about this subject than I do, but I will say that the supply of this class of goods is entirely inadequate for the demand. A good flower always sells at good prices, a poor one is a drug on the market. Most of us cater to our local market, it is therefore but natural that we should study the wants of that market.

Now is the time the grower is getting in shape for the coming winter season. Rose houses have been stocked with new plants; carnations, violets and a host of other stuff is being nursed along. Let us hope with the view to quality as well as quantity, so that in the coming season good stock will be the rule, not the exception.

But it is not simply the winter season for flowers that we should prepare for, though of course the most important; summer as well brings demand for good flowers, which is provided for by very few. There is a time the grower is fond to designate as the season "between hay and grass," meaning that one crop is off and the next isn't quite ready. Well, if the farmers' season "between hay and grass" was one quarter as long as the gardeners, his cow would be a beautiful corpse long before the hay was cured, unless she had the gift of being able to subsist on wind. The grower cuts his grass in June, but the hay won't be ready until October, meanwhile the dealer is expected to graze on the stubble, unless he prefers wind pudding. In other words the old rose crop is gone by the end of June and the new supply will not be ready until October.

If you believe what the grower says, why, he is going to have the finest lot of stuff you ever laid your eyes on. Everything is doing finely. "Just you wait." It is just "between hay and grass now you know." But we can't wait, our patrons don't relish the stubble, the leavings of last season's exhausted stock, puny, mildewed stuff not fit for any earthly use; they demand something better. Can not Chicago and the territory tributary thereto produce good roses in summer? I should hope so. Will it pay the gardener to grow roses just for summer and early fall supply? We are led to believe it would. Good American Beauties sell readily at 8 to 10 cents, good fancies from 3 to 5, providing the stock is first class and free from mildew. Of course suitable varieties should be selected for summer growing, excluding all kinds that have a tendency to mildew. Some of the best winter sorts are entirely worthless for summer culture, and again there are many superb varieties that can be grown to perfection in our summer heat if properly cared for.

One half of the growers' houses stand empty from the first of June until the end of September. If parts of these houses were planted with young vigorous stock we should have an ample supply, and thousands of extra dollars would find lodgment in the pockets of our home producers.

The rose, though the leading flower, is not the only one that should receive attention, we want variety, the market is entirely barren of good flowers at this season of the year. Why not grow a few of our choice varieties of carnations such as Buttercup, Grace Wilder, Grace Farden and others of this class. Long-stemmed blossoms of these kinds sell readily at fair prices. The list might be extended to include a good many kinds not thought of heretofore, with the mistaken idea that it would not pay to grow them.

New Chrysanthemum Walter W. Coles.

This new Japanese chrysanthemum is said by some good judges to be one of the most valuable varieties Mr. W. K. Harris has raised. The flower is very large, brownish orange or terra cotta in color and semi-double.

Plant Notes.

BY WM. FALCONER.

THE WHITE flowering variety of *Catleya gigas* called *Rochelliana* and recently held by Siebrecht & Wadley, has been bought by Mr. F. L. Ames, North Easton, Mass., for \$1,000. Besides being an extraordinarily fine large-flowered variety, it is unique in being the only white one ever seen. The price seems high, but the specimen is a fine plant and had it made its way to any European nursery the chances are that it would have been divided into several parts, each one costing half as much as the whole plant has cost Mr. Ames.

SISYRINCHIMUM ARIZONICUM from the mountains of Arizona is now in bloom in the Botanic Garden, Cambridge. It is a showy yellow-flowered species worthy of garden cultivation.

CALAMINTHA GLABELLA is also in bloom at Cambridge. It is a dense low-growing fragrant perennial with small lilac purple flowers, and indigenous to rocky banks, Tennessee. Desirable for rockwork, but not showy enough for use as a border flower.

UNDER THE NAME of *Anemone polyantha* I also observed at Cambridge a white-flowering species with moderately small blossoms but large handsome divided foliage. As it now appears, not good enough to become a garden favorite.

PLATYCODON MARIESI as seen at Cambridge and Brookline does not appear to me to be distinct from *P. grandiflorum*, the species now so common in our gardens.

MR. CAMERON, a young man from Rothiemurchus, Scotland, and recently with Mr. Harris at Wellesley, has been appointed foreman at the Botanic Garden, Cambridge, and started on his duties there on August 1. Prof. Goodale advertised in most all of the July and several of the August horticultural journals, together with several daily papers, and up to August 2, he tells me he had only 45 applications.

WHITE and PINK water lilies are quite plentiful in the Boston florists' windows, but very few orchid blossoms are exposed for sale. Sweet peas are abundant.

IT IS REPORTED about Boston that E. L. Beard, a newspaper man, has bought an interest in the *American Garden* paper and also associated himself with F. L. Temple in the tree nursery business.

PROF. SARGENT has a number of Chinese wistaria plants grown as standards and in tubs. When in bloom these are arranged about the verandas, in winter they are cared for in a shed-cellar. These standards bloom very freely; indeed some that we grow as out door permanent plants are more profuse than are those we let run as vines.

IN THE Boston Public Garden is a bed of columbines, now of course out of bloom and with the old flower stems cut over. If *Hyacinthus candicans*, *gladiolus* or *Montbretia crocosmiflora* had been planted in this bed as soon as the columbines had done blooming, they now would be well up and soon in bloom and that too without injuring the columbines.

MR. HEWS, of Cambridge, is completing an extensive addition to his flower pot factory. The new building is of brick, 81 feet long by 45 feet wide and four stories high.

ZIRNGIEBEL'S WHITE ASTERS.—"Hold on there," shouted Z. the other day as a

young man was skipping upstairs in Stewart's store with a basketful of white asters. "These are my asters, brought in to-day now they are off. You see how solid and white they are and they don't show any yellow center, and they are stiff stemmed. I get them in now when other white flowers are scarce. Sowed them last December, grew them in pots till spring when I planted them out. They are a selected cross between *Victoria* and Truffant's *Paeonia Perfection*."

QUISQUALIS INDICA, the Rangoon Creeper, is a woody vine of vigorous growth and very floriferous nature; its flowers are red or reddish brown and profusely borne during the summer months. It is in capital bloom in Prof. Sargent's greenhouses.

ALLAMANDA SCHOTTII is one of the most vigorous of all our warm greenhouse vines, and under favorable circumstances always in bloom. Kept rather dry in winter and moist in summer it bears an enormous flower crop at that time when our greenhouses are pretty well emptied of plants and we can afford to give it full liberty. It is much grown about Boston.

NYMPHAEA TUBEROSA.—A dozen years ago Professor Sargent planted a few roots of this native species in the lake in his grounds. It has now spread immensely and almost become a weed, but it flowers very freely and the blossoms are large, white and beautiful. We have always regarded it as a scentless lily, but Charles Sander, Prof. S.'s gardener, insists that it is quite fragrant; well, it has a peculiar smell, but I certainly would not call it fragrant.

SPIKED LOOSESTRIPE (*Lythium Salicaria*).—Prof. Sargent uses this in quantity along the margin of his lake and between it and the neighboring trees with capital and natural effect. It is a vigorous perennial which in July and August displays to much advantage its long spikes of rose-purple flowers. Easily raised from seed, blooms the second year and lives "forever."

AT MR. J. L. GARDINER'S one greenhouse is filled with nymphaeas, Cherokee roses and Southern jessamine (*Gelsemium sempervirens*). It is a lean-to structure. The nymphaea tank is lengthwise nearer the back wall than the passage-way, and along the front of the house is a raised bench filled with earth as if for carnations, and in this the jessamine and Cherokee roses are planted to be trained up along the roof.

GOLDEN FLEECE is the name of a very large yellow-flowered abutilon I saw at Mr. Gardiner's; introduced from England they told me.

MR. ATKINSON has his plants of *Cypripedium insigne* in pots and set outside under the partial shade of some trees. They like this sort of summer treatment and, he thinks, flower all the better for it.

DAVID ALLAN has the finest grapes and Fred Harris the best peaches, nectarines and figs under glass about Boston.

PHAJUS GRANDIFOLIUS when well done is a noble orchid, but when poorly done an indifferent sort enough. Mr. Atkinson grows his during the summer months in deep sunk frame-pits which are kept close and warm by sunheat. The plants have the luxuriance of small cannas.

SOBRALIA MACRANTHA.—Mr. Atkinson has a splendid specimen now in full bloom, this is somewhat late. It is now growing in a north-facing cool house.

Mr. Harris summers his *sobralias* out of doors under the thin shade of an apple tree. The pots containing the plants are set in pans of water but raised up out of the pans enough so that they are only about an inch deep in the water.

GRAMMATOPHYLLUM ELLISII.—Of this handsome Madagascar orchid I saw several fine specimens, the largest ones at Mr. Ames'. David Allan has it in bloom. The flowers are large, numerous, glossy, and arranged in a pendant raceme, and in color are tawny yellow marked by transverse bars of reddish brown and otherwise blotched and streaked.

New York Notes and Comments.

Mr. C. L. Allen has returned from England much improved in health. He reports a very agreeable trip.

The *American Garden* is likely to pass into the hands of a stock company, now in the process of organization, which will contain several well-known names. Mr. E. H. Libby will remain in control of it, and intends to add to its attractiveness by several new features. The October number will be a chrysanthemum special.

The practice of summering palms, Pandanus and the like outside is more extensively followed than formerly, and there is no doubt it is an improvement on keeping them under glass during the hottest months. At some places the pots are plunged in manure, but this plan is not without some objectionable features. It is very liable to be much too wet, for one thing, and it gets filled with earth worms, which get into the pots. It is a much better plan to plunge the pots in ashes. Where it is desirable to start the plants growing briskly a layer of good manure may be put under the pots, the spaces then being filled up with ashes. The plants need some shade in such a position, or some of the leaves will get scorched. When practicable they will do well under a spreading tree, instead of any artificial. There is no doubt that a lattice house of laths is a very useful place to summer cool-house stuff; it is almost a necessity for camellias, azaleas and the like. The late William Bennett, of Flatbush, was, I think, one of the first to try this plan. Something similar is useful for cool-house orchids. We all know how difficult it is to keep odontoglossums cool enough during the summer, and the artificial means which have been tried to produce an equalable temperature. It is certainly satisfactory to hang them out of doors in a shaded spot; in fact, all cool-house orchids do well under such treatment. Captain Snow, a Maryland amateur, used to hang them on the trees around his place, and this plan is followed by others.

It would not be surprising to hear of the discovery of more white *Cattleya gigas* (C. *Rochelliana* alba), though we only know of the one plant now. It was not long before several plants of the rare *Vanda Sanderiana* were discovered and imported, and there is always the strong possibility that no variety is confined to a single specimen. Still, it will be remembered that some of our noblest orchids have been so scarce in their native habitat that we owe our present stock to increase in cultivation, rather than importation. Orchids are not extravagant luxuries now, whether bought at auction or not. One importer offers large masses of *Odontoglossum Rossii majus*, 40 to 50 bulbs, 75 cents; *Oncidium sarcodes*, from 40 cents up, and grand masses of *Lælia autumnalis* for \$1.50. Of course these are

not established plants, but they are cheap enough in any case. If we don't take care, one of these days the bottom will fall right out of the orchid market, and it will be rather rough on some of us. It is some consolation to know that the cut flower market can not go any lower. There is one place in the shopping district where they sell sewing machines, paper patterns and cut flowers, where they recently offered *Bon Silenes*, *La France* and *Perles* for 10 cents a dozen in the morning, 5 cents a dozen in the afternoon. It was a spectacle calculated to reduce a grower to tears. When trade is dull, as it is all summer, it is better to sell stuff for small prices than not to sell it at all, but it does not tend to improve the trade when it is given away like that. Some of the growers have a strong belief that the commission dealers get more out of their flowers than they do themselves; as a rule the growers who run a store in addition do best. If we hear all sides—the growers, the retailers and the middlemen, we are forced to the conclusion that there is not much money in flowers anyway. Decorative plants seem likely to be our best hold at present.

Some of the seeds sent out by the government seed shop at Washington this year prove very interesting to those testing them. One packet of melon seed, supposed to be one sort, has developed about eight different varieties, according to present calculation, smooth, netted, round, oval and everything else a musk melon may be. Little things like this somehow disturb our confidence in the accuracy of the government institution. In fact, a good many farmers have looked coldly on the department since the occasion some years ago, when they sent out for trial seeds of the Bermuda grass, one of the weeds almost impossible to eradicate in some soils.

Talking of botanical mistakes, a recent (and authentic) anecdote is of an English orchid grower, recently arrived in this country, who was sent out in the woods in one of the eastern states, to collect *Cypripedium spectabilis*. He wasn't up in native flora, and he came back proudly accompanied by a wagon-load of skunk cabbage! The comments with which he was favored are not given, but he is expected to recognize skunk cabbage the next time he meets it.

EMILY LOUISE TAPLIN.

Tuberous-Rooted Begonias.

The development of the double-flowered begonia during the past few years is astonishing. I presume it is not too much to say that there was seen at the recent exhibition at Regent's Park in the collections staged by Messrs. Laing & Co., Stanstead Park Nurseries, Forest Hill, and Messrs. H. Cannell & Sons, nurserymen, Swanley, the latest outcome of the double-flowered begonia. The visitor could not help being struck with the great size and symmetry of the blossoms and the difference in shape they presented. Some have close, compact, double corollas—in their general appearance looking very like a ranunculus; others take the character of hollyhocks, while others are cupped like a rose, and some have broad, smooth petals, imbricated in form like those of a camellia. Then there are to be noted their varied colors, from pure white and blush, through shades of pink and yellow, to the richest crimson, their compactness of growth and remarkable freedom of bloom. It seems as if it would be impossible to excel in point of size, symmetry, and color; but then this was thought of the double

forms of a few years ago, and there appears to be no limit to the extraordinary development of which the double-flowered begonia is capable. The development of the white varieties, both single and double-flowered, is one of the features of begonia culture in these days. In both the Forest Hill and Swanley collections there are to be seen very fine varieties, and especially among the double-flowered forms.

The comparatively short time which elapses from the time of sowing the seed until the plants come into bloom is another of the remarkable features about these plants. I recently saw at the Swanley nurseries a batch of very fine plants raised from seed sown in the middle of January, 1887. They bloomed the same season, and, showing marks of undoubted quality, were carefully labeled to grow on for further proof another year. In the autumn of 1887 the tubers were shaken from the soil and well preserved during the winter, and in early spring laid out upon a bed in a propagating house, much as one would seed potatoes. As soon as the bulbs showed signs of growth they were placed in pots just large enough to take them. Some break into growth much earlier than others, which is an advantage, as it provides a succession of bloom. The next shift was into 4½-inch pots, then to 6-inch, and finally to 9-inch pots, in which, by the beginning of June, they had formed very fine specimens. The first tubers are potted in February, and the potting goes on until all are in the soil.

Tuberous-rooted begonias are fast becoming popular exhibition plants, and at some flower shows they are remarkably well done, the specimens being large, finely grown and bloomed. It was at one time said that begonias would not travel for any distance; because the shaking to which the plants would be subjected would inevitably cause the flowers to drop. But some years ago, when Messrs. Laing & Co. sent some plants all the way from London to Torquay in very fine condition, the supposition of danger in traveling was abandoned. They are now taken long distances, and with but very little harm. Even at small country shows begonias are found, and they are generally among the best grown and bloomed specimens.

The single-flowered varieties may be adverted to in a few words for the purpose of pointing out how circular the flowers are becoming. The side petals—at one time small—have become large and rounded, and now rival in size and roundness those at the top and bottom of the blossoms. In Messrs. Laing's as well as Messrs. Cannell's collections at Regent's Park could be seen large flowers of great substance, and as nearly circular as it seemed possible to become. The advance of late years from the florist's point of view has indeed been both rapid and surprising.—*R. D., in London Garden.*

LONDON, ONT.—Everything is dull here at present, there is no demand for flowers with the exception of a few funeral designs. The markets are glutted with vegetables and fruit of all kinds. Mr. E. Meredith, one of London's most prominent lawyers, has come to the conclusion that there is money to be made in growing flowers for the trade. With that end in view he has bought the boilers, pipe, stock, etc., of A. Negler, and will build two rose houses 100x20 each, and one 100x10, which he proposes to fit up and stock with the very best.

W. G.

FUNERAL DESIGN OF JACOB'S LADDER OR GOLDEN STAIRS

Funeral Design of Jacob's Ladder or Golden Stairs.

The base is a circular bed of white carnations three and a half feet in diameter and heavily fringed with ferns. A sickle made of pink roses lay in the foreground. Just back of the center rises the ladder or stairs, composed of *Eucharis amazonica*, white roses and carnations. There are seven steps or rounds which in this piece are made of purple flowers, but can be formed of gold colored flowers. There is a sheaf of wheat on one side of the base and a cluster of *Longiflorum* lilies and callas on the other side. The ladder is five feet high. A dove holding a sprig of grain in its mouth surmounts the ladder. This piece was made by Fred Gordon for the funeral of a venerable lady.

Cannas.

It seems that quite a revolution has taken place with regard to the cannas. The large, tall-growing varieties that have been the fashion are about to give place to a different type in the Continental kinds that are being grown in many English nurseries. These are much neater, as robust in their way as those of the other race, and though, perhaps, not so useful for giving great masses of foliage in the flower garden, are of more value for the house. We want both classes of canna, in fact. We could ill afford to lose such a lovely form as the crimson-flowered *Canna Ehemanni*; but varieties of this class take

far too much room except where bold views are required. The smaller growing cannas can also be used with the best possible taste in sub-tropical gardening. In the nursery of Messrs. Hooper & Co., Maida Vale, there are several varieties of the new Continental cannas. One named *Petite Jame*, bright red, with an edge of gold, was carrying a spike of flowers, although the plant was only about eighteen inches high. There is also a charming variation in color in the Continental cannas. Some are brilliantly showy, especially those with scarlet flowers and edges of gold and spottings of vivid hues.—*London Garden.*

Gas Tar.

Is there anything better than gas tar for painting greenhouse gutters? If so, what is it? How should gas tar be applied? Cold and crude as received from gas works or boiled and put on hot? I have been told that if gutters are painted with gas tar once or twice a year for a few times they will be entirely water tight and last for years without further attention. Do all agree to this? If not, what is better? SAMUEL C. MOON.

Morrisville, Pa.

New Chrysanthemum Elk's Horn.

This new chrysanthemum is so named on account of its peculiarly shaped florets. It is pearly white in color, full and globular in form, quite distinct and extra fine.

The Elevation of Our Business.

BY H. H. BATTLES.

[Read before the New York convention.]

John Ruskin has defined fine art as any occupation in which the head, heart and hand work together. To make a success of our business it is particularly necessary that all three of these powers are exerted.

How often we see men that work constantly, and at the very hardest kind of drudgery, from morning until night, but never seem to make any headway, or get any pleasure from their occupation or life; they either have not the disciplined mind to direct the hand, or have not their whole heart or interest in the business; these men are plodders and work only with their hands. Then again we see men who are just the opposite, who have bright minds, and take a very great interest in their occupation, always alive to new ideas and suggestions, know just how things should be done, but never can do it themselves; their whole life is made of theory and visions; their head and heart are not balanced by good hard physical work; develop the two so that they may be of some practical use, by the third power, the hand.

Political economists tell us that labor is the only source of wealth, but the labor of the hand, that is turned into a "fine art," by the other two powers, the head and heart, undoubtedly give the greatest returns: First, the head or mind we all realize and a great many of us to our sorrow, should be cultivated in childhood, but those of us who did not have the opportunity then can console ourselves by knowing that by giving our attention to our business and studying the principles of it, our case is not hopeless.

I feel that every person engaged in growing plants, should know the first principles, at least, in botany. Take the seed, examine how wonderfully it is constructed, containing as it does not only a minute plant, but substance on which it can exist and develop when the proper conditions are offered. Then the stem, leaves, buds and finally the flowers which produce more seeds. Take a lily or rose, dissect it, and learn the name and use of each part, this will excite a deeper interest in botany; we shall find that we are more observing, looking for the same organs in different plants; then not content with our own observation, we may be led to take up a good book on botany and we will have put before us on three or four hundred pages what has taken hundreds of men many years of thought and study to accomplish; and in time the ideal grower will become a botanist and be inspired with such thoughts as Darwin expresses in his book on the "Movements and Habits of Plants."

Last winter while talking to a grower who had been in business all his life, and his father before him, I asked him a few questions about hybridizing, thinking I would try to post myself by getting some good practical ideas; he said "he did not take much stock in it, and thought it better to let nature take its course and let them cross themselves." It occurred to me that an argument like this was on a par with advising faith cure to a disabled man when the most skilled and advanced surgical operation was necessary. Darwin was hardly of this gentleman's way of thinking, he made a great many experiments in hybridizing; he speaks of the seventh generation of plants and crossing them when grown under different conditions; also of the struggle for existence among them, the

effect of climate on reproduction, the sleep of the plants, self-production during sleep, influence of gravitation upon them, the power of digestion, the movement in relation to their wants and the diverse means by which they gain their subsistence. I know there are a number of gentlemen here who are perfectly familiar with these researches; a great many of the subjects seem to be of no practical use, but putting our minds in this channel is what elevates, not only ourselves, but those with whom we come in contact, and in order to do this we must first become interested in botany. On this subject there is no better teacher than the late Prof. Asa Gray, of whom it is said no one has ever yet approached, in the rare art of making purely scientific theories and dry details popular and interesting. From his charming elementary work, "How Plants Grow," to his more elaborate "Manual," there is one simple, concise, and yet exhaustive method of treating the various grades of the science. Flowery rhetoric, beautiful figures, lofty speculations and romantic fancies are discarded, and in place is given a simplicity of statement, a transparency of language and an enthusiasm which lights up every page, and causes the student to enter readily into the author's spirit. The leading scientific men of this country and Europe have awarded the highest place in the galaxy of botanists to Prof. Gray.

Now for the dealer to know the habits and requirements of plants would be very useful and interesting; but there are other subjects which demand his attention first. He comes directly in contact with the consumers, not only caters to their wants, but stimulates the demand for flowers by the judicious handling of them; and the progressive grower is the one who first feels the pulse of the market through the intelligent dealer.

Surrounded as we are by the most beautiful colors, the most exquisite forms, and the most delicious fragrance in nature, one of the first thoughts of the dealer should be the artistic arrangement of flowers. Taste to a very great degree is a matter of education, and the study of color, form and position should be carefully considered; the knowledge of a few of the laws of color are absolutely essential to the intelligent arrangement of flowers. For instance let us take the artist's primary colors, red, yellow and blue; mix the red and yellow, we get orange, red and blue, we get purple, and yellow and blue we get green, which gives the secondary colors, orange, purple and green. Blue is complimentary to orange, red to green, and yellow to purple. Then there is a harmony of tone, that is by reducing any of these colors with white; we will take a deep red, reduce it with white until you get a delicate pink, then we have harmony of tone; for instance, take a Jacq. with its own foliage, both are deep colors, reduce them both with white and you have possibly the La France and light lily of the valley leaves. Violets and daffodils which are purple and yellow, reducing them both with white, does not take them out of their scale, and possibly we have a violet orchid (cattleya) and acacia which is a delicate yellow, then a pink orchid with light green ferns; cornflowers and marigold, two strong colors but harmonious. So it is with vases, if you have a blue one use orange tints, or green, use red, etc. If you are obliged to use flowers that do not harmonize, separate and relieve them with white ones. Be careful of reds which I consider

the most trying color with which we have to deal. It is not an unusual sight for us to see an expensive design or basket with some choice tone of red in, say Jacqs. or Beauties, and the effect is entirely destroyed by a few bright red carnations or bouvardia, which would have been much better thrown away than put into the design.

There is no business so rich in color as ours. Do we take the advantage of it and get all the profits and pleasure from it that we might? It is a beautiful and interesting study and does not lack text books; should any gentleman's interest be stimulated by anything I may say, he can find the subject exhaustively treated by Chevreul on Color; who is at the head of "Gobelinus Tapestry" works, and has made this subject a life study; also G. Field's "Chromatograph," which has been modernized by J. S. Taylor, London, and a delightful book on color by A. H. Church. There are not many of us who have the time to go into the subject deeply, nor have we even the desire, yet there are a few points which we should know, that when our advice is asked we can speak with authority. For instance, we are consulted about a table decoration, possibly there are some pronounced colors about the room or on the table, we can decide what flowers will give the guests the most pleasure, and give us the greatest amount of credit. If the colors are all neutral we can use flowers that will be most complimentary to the hostess' costume, and our thoughtfulness and knowledge will not go unappreciated. When we are asked about the best flowers to wear with a certain dress, after knowing the color and tone of same we then can select the most suitable flower.

In speaking of flowers for ladies to wear, I would suggest that often when a gentleman wishes to send a very large and expensive corsage bouquet, that the salesman advise sending the flowers loose in a box (which can be arranged prettily) that the lady may select the ones she wishes to wear; in this way you will avoid being blamed for poor taste, and not lose any part of a good sale. Another practice which is not quite extinct, is that of making handles on corsage bouquets, and covering them with tin foil, the sooner this is done away with the better. Using a number of colors in a corsage is a great mistake.

Funeral designs have not grown in favor the last few years, for this, the florists to a very great extent are to blame; how many people have very unhappy recollections of funerals where they have been surrounded by ghastly designs and stifling odors; to avoid this, let us be careful how we use the most fragrant flowers, such as jessamine, tuberoses, etc. Most of the designs should be arranged loosely, using some of the most delicate pinks, yellows and violets to relieve the white. Lettering on designs has been greatly overdone. I would advise strongly against it; often customers insist, then it would not be policy to say too much, but if left to your taste decide against it. Apropos to funeral designs, I can not say too much in condemnation of the custom of some florists in soliciting orders for this kind of work, the people so approached are apt to cast a reflection on the whole trade.

In arranging hand bouquets it is well to avoid stiff effects; when you know that there are a great many to be used, study to make some striking and pleasing contrast. Orchids which are rapidly growing in favor, and have no doubt a great

future in our business, should be arranged with the most delicate foliage and flowers that can be had.

The cultivation of the love for the beautiful in nature, and a knowledge of the harmony of color will make much of our work lighter and give us a great deal of pleasure. We should not lose sight of the great advantage to be derived from these conventions where we can meet men that have had years of experience, and have made the best use of their time; we can study their methods and be advised by them. I could enlarge upon the great advantage derived from the AMERICAN FLORIST, which is another power that deserves our hearty support; it helps us to make rapid strides, and the gentlemen connected with it deserve great credit.

In conclusion, gentlemen, allow me to thank you for the honor, you, through the executive committee, have conferred upon me. I regret not being able to be with you, but in this short and hurriedly composed essay, if I have planted any seeds of thought in your minds, and should they develop into flowers of thought, I shall consider myself very fortunate. I feel sure that you all will agree with me on that point, and that is that education is the best lever by which our business can be elevated and we all should study the best means to that end.

Daily Record of Work Done at the Lincoln Park Greenhouses, Chicago, 1887.

Sept. 1.—Tem. morning 72°, noon 89°, evening 73°. Wind WSW. to N. Finished potting from propagating frame rooted cuttings of *Alternanthera paronychioides* major and commenced potting rooted cuttings of *Alter. versicolor*.

2—Tem. 72, 72, 68. SW. to NE. Placed in propagating frame cuttings of coleus and rose geraniums. Cut off the lower part of *Echeveria metallica* kept in pots and placed the tops in sand to root. Cleaned and trimmed beds. Cleaned frame yard. Continued cleaning seeds.

3—Tem. 68, 78, 72. ENE. to E. Continued propagating coleus.

4—Tem. 65, 80, 77. E. to SE. Sunday.

5—Tem. 72, 79, 72. SE. to NE. Potted from propagating frame rooted cuttings of *Alter. versicolor*. Turned soil pile. Cleaned beds.

6—Tem. 72, 94, 85. SE. to SW. Same as yesterday.

7—Tem. 64, 74, 64. NW. Same as yesterday and cleaned glass.

8—Tem. 61, 74, 66. ESE. to WSW. Finished potting *Alter. versicolor* from propagating frame. Potted for stock *Alter. aurea*.

9—Tem. 68, 76, 66. SW. to NE. Cleaned rose beds. Pricked in pans a late lot of *Cineraria hybrida*. Potted *Alter. aurea* for stock.

10—Tem. 56, 62, 60. NE. Repotted *Primula chinensis* into 3-inch pots.

11—Tem. 60, 72, 65. E. to SE. Sunday.

12—Tem. 62, 70, 71. SE. to NE. Sifted sand and placed on benches in No. 2 for propagating geraniums. Potted *Alocasia odorata* started in old frame from pieces of the stalk. Potted up more *alternantheras* for stock.

13—Tem. 76, 81, 67. WSW. to WNW. Commenced potting coleus from propagating frame. Sifted sand on lake shore for houses.

14—Tem. 57, 77, 62. WNW. to WSW. Same as yesterday.

15—Tem. 63, 68, 62. NW. Finished potting and plunging coleus. Repotted *Begonia Saundersonii* into 4-inch pots. Continued cleaning glass and glazing.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By a young man; aged 21; as assistant greenhouse man. Address VANDA, care American Florist.

SITUATION WANTED—First-class greenhouse man. Best of references; single. Address Box 474 Mittenwan, New York.

SITUATION WANTED—By a gardener of 10 years' experience. Can give first-class references. Address R. H., care American Florist, Chicago.

SITUATION WANTED—Young man with three and a half years' experience with English florist aged 30; single; sober. W. K. H. A., Am. Florist.

SITUATION WANTED—By a young florist in a store or with a dealer in flowers. Speak English, German and French. Address TH. W., 24 E. 65th St., New York City.

SITUATION WANTED—By a practical florist to represent and travel for a thoroughly established concern in connection with the trade. Address C., care American Florist, Chicago.

SITUATION WANTED—By a thorough experienced seedsman, 15 years' experience, knowledge of plants, etc. Best of references. Address JAMES SPENCE, 220 River St., Des Moines, Iowa.

SITUATION WANTED—As landscape gardener. I have had many years' experience in several countries in Europe, and first-class draughtsmen. Address G. L., 323 Eaglewood Ave., Chicago, Ill.

SITUATION WANTED—Florist's foreman or gentleman's gardener. Fully competent; 25 years' experience. First-class English and Canadian references. Address J. H. Niagara Falls, Ont., Can.

SITUATION WANTED—As gardener or florist by a young Scotchman; aged 24; New England states preferred; disengaged Sept. 1; good reference. Address GEO. SUTHERLAND, Wincendon, Mass.

SITUATION WANTED—By thoroughly practical man as superintendent of private or commercial establishment; good salary required; married. Address with particulars B., care American Florist.

SITUATION WANTED—By a young married man, as gardener. Private place. 10 years' experience in greenhouse, landscape and all its branches. Address JOHN GREENHAUGH, Box 144, Woodbury, N. J.

SITUATION WANTED—By gardener who understands his business in all branches; gave good satisfaction to last employer. Good references. Address ROBERT ENGLISH, care P. R. Pyne, Riverdale, N. Y.

SITUATION WANTED—By German florist, understands the cut flower trade in all its branches; roses a specialty; good designer. Capable of taking charge of commercial place. Address FLORIST, care Mr. Wollmers, 215 5th St., Brooklyn, N. Y.

SITUATION WANTED—By a young man; single; 11 years' experience, both in commercial and private gardening; competent to take charge or assistant. Well recommended. Address PLANTSMAN, care American Florist.

SITUATION WANTED—A first-class gardener. Ger. single; competent in all its branches, wants situation in a commercial or private place. Can give best of references. Address FRANK BELT, 943 Buttonwood St., Philadelphia, Pa.

SITUATION WANTED—By English gardener and florist; first-class rose grower; 8 years growing roses for New York market; disengaged Sept. 1; good wages expected. Best of references; married; age 35. Address W. H., Yonkers, N. Y.

SITUATION WANTED—As foreman or manager of a nursery or large florist place, having 25 years' experience; married; no family. No. 1 rose grower; good grafter and blunder. Disengaged Sept. 1. Address W. W. B., care American Florist.

SITUATION WANTED—As gardener, by Scotchman of 11 years' experience in Gardening; 5 yrs. in this country. Well recommended from past and present employers. Married. Private place preferred. Address C. D. S. 400 Thames St., Newport, R. I.

SITUATION WANTED—By a young man of eight years' experience. Good grower and propagator of roses and general greenhouse stock, in private or commercial place. Can come at once if particulars in answer given. Address stating wages, etc., A. M., care American Florist, Chicago.

SITUATION WANTED—The writer having had a large experience in management of catalogue plant business (fruits and flowers) wants a salaried situation with established house, or a partnership with person of sufficient means to work up new business. W., 251 Alexander St., Rochester, N. Y.

WANTED—A small second-hand saddle-back boiler suitable for 500 or 600 feet 4-inch pipe. Address WM. YERBURY, Rock Island, Ill.

WANTED—A florist to take charge of my greenhouses, at a moderate salary and commission on sales. Address with references WM. SMITH, Sioux City, Iowa.

WANTED—A young man practically conversant with the seed business, especially the market garden and retail department. Must be thoroughly competent to take charge of same, and to write and speak German. Address, stating reference, A. Z., care American Florist, Chicago.

WANTED—We are in want of a first-class seedsman to take charge of our seed department. Must be a good judge of seeds, and especially understand the retail catalogue trade. Apply, stating experience, references and salary. Only first-class men need apply. L. L. MAY & Co., Nurserymen, Florists and Seedsmen, St. Paul, Minn.

FOR SALE—A good second-hand wrought iron saddle boiler, 3 feet wide, 3 feet long, 15 3/4-inch flues and pipe connection for 4-inch pipe. Address H. MURNIN, Morris Ave., Bloomington, Ill.

FOR LEASE—8 acres land, 5 greenhouses, lot hot-bed sash, dwelling house, all necessary out-buildings, franchises established 17 years. For particulars, apply to E. McNALLY, Anchorage, Ky.

FOR SALE—Greenhouse, stock and fixtures at Marshall, the county seat of Saline county, Mo. The wealthiest county in the state; population 35,000. The only stock of the kind here. A rare opening for the right man. Address W. M. ELROD, Marshall, Mo.

\$250 CASH WILL BUY SMALL GREENHOUSE STOCKED.

Thousands of pots. Full line of requisites. Town of 10,000 inhabitants. No other commercial greenhouse within 30 miles. Cause, sickness.

W. D. BASTOW, Wellington, Kansas.

FOR SALE.

A large size Smith & Lynch Greenhouse Boiler, in good condition. Capable of heating 1,500 feet 4-inch pipe; cost \$225. Will sell for \$100, f.o.b.

J. NEWMAN & SONS,
51 Tremont St., BOSTON, MASS.

FOR RENT OR LEASE,

For a long term, eight Greenhouses, nearly all heated by hot water (Hitchings & Dick's boilers), a large lot of cold frames and sash, with six acres of good land, dwelling house of seven rooms, stable, etc., situated near Waverly, in the Northern suburbs of Baltimore. A large part of the houses now planted with Roses of the best sorts—Perle des Jardins, Niphetos, La France, Pierre Guillot, C. Mermet, Bennett, etc.

There is also a good stock of Roses in pots—Azaleas, Palms, Ferns, Eucharis, Ficus Asparagus and other plants of most salable kinds; Chrysanthemums, Bonvardias, Gladioli, Tuberoses, etc., and plants for spring stock in the open ground, Strawberries, Grapevines, etc. Ample supply of water from tanks in greenhouses and cistern and wells on side. This is an opportunity for a competent man with small capital to secure on very favorable terms, a good established business, now in the dull season paying expenses. Address

ERNEST HORN,
Of A. Hoer & Co., Baltimore,
Or ALEX. SCOTT, Waverly, Md.

JOHN CURWEN, JR.,
GENERAL
GREENHOUSE STOCK AND ROSES.
Villa Nova P. O., Delaware Co. Pa.

Early Fall Fashions.

Many modifications of old ideas characterize early autumn styles, but there is one fact of general interest in the floral world, and that is that flowers of all colors are being worn and again used in the make up of choice designs. Exquisite taste is displayed in shading; pink shaded into crimson; dark reds shaded into the blossoms that are nearly black, purples elegantly blended from delicate lilac to the "noir" heliotrope; all the yellows from cream to old gold, and the different white tints, all distinctive, the paper white, bluish white and ivories. Simple flowers have never been more popular. Some of the handsomest luncheon arrangements at Newport are being made with single hollyhocks, these being placed among ferns in flat cut glass dishes.

Rich effects are made on tables with double hollyhocks, dahlias and asters, these blossoms being made in mounds just high enough so that all the flowers may be seen from every side, as they present a solid blaze of color. A mound of shaded crimson, shaded golden or purple flowers is splendid. Shaded chains around the table are also laid, rosette like fall flowers, as above mentioned, appearing among coils of fine foliage. Delicate tracteries of foliage have given way to denser garlands, the show of lovely greenery nearly eclipsing that of the flowers.

While every imaginable rustic effect has been worked out for table covering for seaside feasts, such as mats made of braided grasses and curling mosses, yet the prospects are that as the season advances the richest fabrics will be the vogue for the foundation of floral decoration on boards spread for dinner. Luncheon cloths, on the contrary, will appear of lace, gauze and Florentine silk. French cottage effects will be copied for this meal which is the one most suitable for the "rose buds" and debutants of society. These light fabrics are puffed on the table so that flowers and foliage laid between the shirrs have a charmingly dainty appearance. More and more is there opportunity for the deft hand of the seamstress in the floral shop to work with the decorating staff. The lovely effect of a luncheon where rose colored tulle is held in place wherever effective in the room decoration by long stem Grace Wilder carnations, and the table is covered with shining pink gauze, among the irregular puffs of which are clusters of the same flower, is a Parisian novelty this season. Potteries, silver and cut glass, as well as flowers, show off beautifully in a cushioning of these materials.

A general collection of flowers decorate rooms arranged for entertainments. Gladiolus, hydrangeas and asters with trusses of bright geraniums, are the flowers that were prominent in the rich

display made in the grand mansion trimmed by Klunder for the Van Alen ball. Spikes of gladiolus rayed around every window cornice and curious arch ways of the quaint Louis VI style of architecture. Shaded gladiolus (and there is a fine opportunity for good work with this flower of many colors), were most artistically placed with blazing and setting sun effects, over mantels, mirrors and cabinets. The setting sun worked out at the end of a corridor, music room, picture gallery, or library is an elegant device, easily put up with fall flowers. Some of the fine workers with foliage will use autumn leaves later for forming some portions of this effect.

Baby baskets are trimmed prettily with flowers for gifts to new babies. Sometimes they are made entirely of blossoms and foliage. The basket is first covered with green surah silk, on which asparagus is laid, a valance flounces the basket, and this is formed of the same vine. Cushion and pockets are made of small pink rose buds, and the entire basket is trimmed around and in regulation style with pink begonia bloom.

FANNIE A. BENSON.

Stephanotis and Rhynchospermum.

No florist should be without these, for they both are very useful, are good keepers and are very fragrant, they should be grown more extensively for the trade. I am sure it is easy enough to grow them, requiring no special culture, nor a separate house to grow them in. The stephanotis may be planted against an end wall of a rose house or at the end of a center bed or bench and a few wires stretched to support the vines. The frequent syringings in such a house will keep down mealy bug—the only insect which may cause trouble in growing this plant. They however should not be planted on the benches with the roses, for if you follow modern style of growing roses you have to remove the soil and replant every season, and in doing so your stephanotis would either be destroyed or at least seriously injured, but have a separate box made for them, if you can not plant in a solid bed of earth and they will do for years in such boxes, provided they get an occasional top dressing. If small plants are set out you will not get a great many flowers the first season, but as they make wood and grow stronger an abundance of the delicate, waxy white clusters will reward the little extra care you may bestow on the plants. There are many corners in greenhouses which may be utilized in this manner without interfering with other stock and without taking up hardly any room, as they are planted against the wall and the box, containing soil and plants, may be placed below and even with the bench, if you can not conveniently find room

enough on top of it. As to the rhynchospermum it will do well under the same treatment and in a like atmosphere, but they may also be planted close to the upright supports of the ridgepole or pur-lins in any house no matter what temperature the house is kept at, be it 40° or 75°, it will do well anywhere, the only difference being, the cooler you keep it the later your flowers will appear. By planting some in a warmer and others in a cooler place you will have a succession and I know both you and your customer will like the baskets or floral pieces you may choose to trim with these lovely and delicate sprays, emitting such jasmine-like odor; a plant in bloom will perfume a whole house, and when not in that state will still be an ornament to the house, with its glossy, dark green foliage. Scale and mealy bug may attack this plant also, but as a rule it is a comparatively clean plant. Both stephanotis and rhynchospermum are generally classed among hothouse plants, but will do in ordinary greenhouse temperature as long as they are not overwatered while at rest in midwinter. Stephanotis may be had in flower from July to November, while rhynchospermum will bloom in a warm house as early as February and continue to bloom for two months, and if kept in a cool place would come in correspondingly later.

Rochester, N. Y. JOHN B. KELLER.

Foreign Notes.

Mr. Oliver Landreth, in company with his son and nephew, is visiting Norway and Russia. They will return in October.

Mr. Daniel De Cou, who has been pushing the Planet Jr. goods on the continent sails for home September 15.

Mr. Jos. B. Fuller, with James Vick, sails for home September 18.

Mr. V. Lemoine, of Nancy, is said to have a blue gladiolus.

The meetings of the London seedsmen twice a week at the corn market affords them excellent opportunities to compare notes on crops and stocks.

The very wet summer on the continent is likely to make the lily of the valley pips very late this season.

African tuberose bulbs are not in favor in England.

English pea growers were much discouraged over the prospects August 5. Some estimated the yield as low as one half crop. Many acres in Kent being under water and other crops growing in the pods from excessive rain.

In general the seed crops of Europe though making rank growths, do not seem to be setting the quantity of seed which they would do with dry weather.

A new class of single dahlias, quite dwarf, will be offered to the trade within a year or two.

Oscar R. Krienberg, Philadelphia, pansy seed; Jas. B. Wild & Bros., nursery stock; Albert Benz, Douglaston, N. Y. pansies; Fred W. Kelsey, New York, nursery stock; J. M. McCullough's Sons, Cincinnati, O., bulbs, plants and seeds.

Our Ancient Order.

In response to the statement of a gentleman that he belonged to the most ancient existing order, which originated in the time of Solomon, namely, the Free Masons, Mr. Geo. Field, of Washington, responded: "I belong to an order still more ancient. It is the Free Sons of Gardeners and it originated in the Garden of Eden."

WILMINGTON, DEL.—The prospects for the floral exhibition in connection with the exhibition of the Peninsula Hort. Society this month are very flattering. All local florists and amateurs will exhibit, and Mrs. T. Harrison Garrett, of Baltimore, will send two car loads of plants from her private conservatories,

"THE WATER HAWTHORN" is what the editor of the Otago, (N. Z.) *Witness* calls the Aponogeton distachyon and surely this is a prettier and happier name than "Hawthorn scented Cape Pond weed" or "Winter Hawthorn," the names applied to this sweet and lovely little water plant by writers in England. Although a native of the Cape of Good Hope it is hardy in outdoor ponds as far north as Boston, providing the roots are beyond the reach of ice, and as an outdoor plant it blooms from September till May except during the icy season of winter. As a greenhouse plant it will grow in vessels in very shallow water and bloom all winter long. It rests in summer. A generous bloomer. May be increased by division or seed. W. F.

The American Florist Company.

Haupt-Office: 54 LaSalle Str., Chicago.

Westliche Office:

Zimmer 15, Vanderbilt Building, New York.

Alle Correspondenzen sollten an die Haupt-Office in Chicago gerichtet sein.

Die Zeitschrift "The American Florist" erscheint monatlich zwei Mal. Im fünften ersolgreichen Jahrgange überschreitet sie gewöhnlich 24 Seiten in einer durchschnittlichen Auflage von 5000, von denen 4000 an regelmäßige Abonnenten versandt werden. Im Interesse der Floristen Amerikas herausgegeben, zählt sie unter ihre Mitarbeiter die praktischsten Männer im Fach, was für die Leser von großer Wichtigkeit ist.

Ein Theil der Zeitung wird den Floristen gewidmet.

Um den Fortschritt des Gartenbaues in Amerika richtig kennen zu lernen, ist die Zeitschrift "The American Florist" unbedingt notwendig. Der Preis derselben ist portofrei 6 Mark jährlich.

Convention amerikanischer Blumenzüchter.

Die vierte Jahresversammlung der Gesellschaft amerikanischer Blumenzüchter fand in der Stadt New York am 21., 22. und 23. August statt und stellte sich als die größte heraus, die je gehalten wurde. Diese Gesellschaft zählt jetzt über 1100 active Mitglieder und nicht weniger als 700 derselben beteiligten sich an der New Yorker Versammlung, welche in Cooper Union Hall an der Achten Straße tagte. Es wurden täglich drei Sitzungen abgehalten und eine an Abwechslung reiche Reihe von Gegenständen zur Verhandlung gebracht, welche sich nicht allein auf die Cultur aller unter Glas gezogenen Pflanzen erstreckte, sondern auch auf die Art ihres Transports, den Klein-Verkauf von gepflanzten Blumen und ausgiebige Debatten über alle vorgelesenen Arbeiten. Im Anschluß an die eigentliche Convention war eine große Ausstellung von Pflanzen, Blumen, Blumenförmern, Zwiebelgewächsen und allen Treibhaus-Maschinereien, -Kesseln und -Geräthen arrangirt worden. Mehr als 75 verschiedene Firmen stellten ihre Erzeugnisse in der Halle aus und 1000 Mark in Geldpreisen wurden für die schönsten Blumenstücke aus gegeben. Nach Schluß der Sitzung am 24. August nahmen alle Mitglieder der Versammlung mit ihren Damen an einer großen Dampfer-Excursion auf dem Hudson Theil, welche von dem Blumenzüchter-Verein der Stadt New York zu Ehren der Gesellschaft arrangirt worden war; zwei Concerte und ein reiches Banquet bildeten wesentlich angenehme Theile der Excursion.

Das war ohne Zweifel die größte Versammlung von Männern, die sich mit dem Gartenbau beschäftigen, die jemals in der Welt stattgefunden hat. Einzelne Mitglieder hatten über tausend deutsche Meilen zurückgelegt, um an den Verhandlungen theilnehmen zu können und viele derselben sind über 700 Meilen weit gereist. Die ganze Assemblée war eine äußerst angenehme, die den Theilnehmern lange im Gedächtniß bleiben wird.

Die nächste Jahresversammlung wird in Buffalo, im Staate New York im August 1889 stattfinden. Blumenzüchter in Deutschland oder Frankreich, welche eine Reise nach Amerika beabsichtigen, sollten es so einzurichten suchen, daß sie zur genannten Zeit im Lande sind. Neue Pflanzen, die in den amerikanischen Handel eingeführt werden sollen, können bei dieser Gelegenheit ausgestellt werden.

William A. Stewart, 67 Bromfield St., Boston, Mass., ist Secretär dieser Gesellschaft und ein vollständiger (in Englisch) gedruckter Bericht von 1887 kann gegen Einsendung von 5 Mark erlangt werden; der Bericht der jüngsten Versammlung wird, wenn fertig, bei Empfang von 8 Mark versandt werden.

News Notes.

HAMILTON, ONT.—E. G. Brown has built two new houses 72x13 each.

INDIANAPOLIS, IND.—The Indiana State Fair opens here September 17.

WEST TROY, N. Y.—T. S. Strickler has built two new houses 76x18 and 40x18.

BOWMANVILLE, N. Y.—S. M. Smiley has built a new house 70x18 for carnations.

ELMIRA, N. Y.—E. M. & H. N. Hoffman are doubling the capacity of their greenhouses here.

BROOKLYN, N. Y.—W. C. Krick succeeds his father, Chas. Krick, in the florist business here.

COHOES, N. Y.—Ansel Carpenter has invested in twenty-one acres of land and built two rose houses 100x18 each, heated by hot water.

NEW CASTLE, PA.—Paul Butz & Son are erecting two new rose houses, each 20x100 feet, same to be heated with steam and natural gas.

ELMIRA, N. Y.—The state fair which will be held here September 17-22, promises to be among the largest and best ever held in the state.

GHEENT BELGIUM.—The firm of C. Petrick and Weygandt has dissolved. The business will be continued by C. Petrick in his own name.

KANSAS CITY, MO.—Probst Bros. have opened a floral store in the Coates House, corner of Tenth and Broadway, in connection with their greenhouses on Prospect avenue.

LANSINGBURG, N. Y.—Herman Liederly is overhauling his houses and adding three new ones, two 100x25 and one 100x12. Geo. B. Lucas is working on repairs and has built a new office 26x19.

SARATOGA, N. Y.—S. F. Terwilliger expects to dispose of his greenhouses here and accept the position of treasurer of the Ferguson Boiler Co. of Albany.

CHICAGO.—Foreman Bock of the Forest Glen Floral Co.'s greenhouses at Jefferson was probably fatally stabbed by a discharged employe named Mincho, the night of August 16.

BUFFALO, N. Y.—Jos. H. Rebstock has built two new houses 50x20 each. Bishoff & Sprissler are building two new houses, 25x18 and 20x16, also an office 14x20. W. J. Palmer has now 75,000 feet of glass at Lancaster and is making room for more.

SPRINGFIELD, ILL.—Mayor Chas. E. Hay, who is an enthusiastic amateur florist, has caused the county court house square to be neatly sodded and laid out with flower beds. C. A. Gehrman, another amateur, assisted in the good work and the result is certainly gratifying.

MILWAUKEE.—The two Clark brothers who have been with Currie Bros. for some years, have rented the greenhouses at Pierce and Fifteenth Aves. of A. Laing & Son, and will conduct a general florist business. It is stated on good authority that a new commission house will be opened about October 1.

MINNEAPOLIS.—Cut flower trade has been very dull the past month. The Minneapolis Exposition opened August 22 and will continue thirty-four days.

The sum of \$350 has been appropriated for premiums for plants, flowers and floral designs. This is the first time premiums for plants and flowers have been offered and it is due to the efforts of the Society of American Florists.

TROY, N. Y.—James W. Gemmill, formerly of Cohoes, has located here. He has bought two and a half acres of land near Oakwood cemetery and built three greenhouses, one 100x20, another 120x12 and the third 30x22. J. Young is overhauling his houses and adding a small new one. S. Walsh expects to leave soon for Trinidad, West Indies, to superintend a nutmeg plantation.

MONTREAL.—Edward Graves has added two new houses, one 77x10 and the other 70x18. S. S. Bain is refinishing his store in a very attractive manner. Wilshire Bros. have added a new house 50x10 at their Park avenue nursery. John Murray is preparing to overhaul some of his houses. The city florists had a grand picnic July 25. W. O'Hara has now a six-acre garden giving more room for hybrids, etc.

PITTSBURG.—Florists A. M. and J. B. Murdoch have a telephone which can be used on any floor of the building they occupy. An ordinary telephone is fastened to a board which slides in grooves on the plan of an elevator. A weight equal to that of the "phone" enables one to send the instrument to the top of the building by a slight push. One of their employes lives on one of the upper floors and when in his room he slides up the "phone" and is prepared to take night messages. The attachment is made midway and the connecting wires merely follow the course of the instrument.

THE SCHEDULE OF PREMIUMS for the chrysanthemum show of the New Jersey Floricultural Society, to be held November 7-9 at Orange, N. J., is received. The premiums are liberal and numerous. In addition to the large chrysanthemum list classes are provided for cut roses, carnations and violets, as well as decorative plants in pots, orchids and fruits and vegetables. A special orchid premium consisting of the first volume of Reichenbachia—a handsome work on orchids—is offered by Mr. J. Fosterman, agent for Sander & Co., St. Albans, England. Schedules and entry blanks may be had on application to P. J. Fay, secretary, 172 Prospect street, East Orange, N. J.

NEW BEDFORD, MASS.—Robert Woodhouse, formerly gardener to Dr. Abbe, is erecting new greenhouses principally for roses and carnations for wholesale trade only. He will put up about 5,000 feet of glass this summer and as much more next. He will try a new style of hot water boiler. The houses will be 14 feet wide and covered with 3x8 sash made of selected pine, with double thick glass. Mr. W. thoroughly understands his business which is an assurance of success. Chrysanthemum growing is at fever heat here now, there being about 5,000 plants in the city under careful cultivation, some of which stand six feet high and some of a spread of four feet at this date. If nothing befalls them there will be some of the finest and largest plants exhibited at the fall show ever seen in the state.

WILL SOME florist who is using steam for heating, please state what kind of boiler would be the best, also what sized pipe to heat two houses 100x18 each.

Pleasant Hill, Mo., C. M. KELLOGG.

PANSIES.

NEW CROP SEED JUST ARRIVED FROM THE GROWERS.

I would call the attention of the trade to the following splendid varieties of Pansies which I have had grown especially for my own home trade by the best French and German growers:

"NEW IMPROVED GIANT TRIMARDEAU"

NEW "BUGNOTS" FANCY, especially improved which for beauty of form, good substance, variety of markings, richness of color and enormous size cannot be excelled by any one. These are the very best varieties for market purposes ever grown.

"NEW CROP SEED" put up in trade packets containing 500 seeds each.

Trimardeau, 50c., Bugnot, 75c. each.

Printed directions for sowing, in English and German.

Aquatic Plants in Artificial Basins.

To grow aquatics successfully water is an absolute necessity of course, but one need not seek a water course or a pond to produce good and satisfactory results in the attempt to cultivate them.

Four years ago I constructed out of ordinary brick and cement a basin about seven feet across by fifteen inches deep and planted it with the beautiful *Nymphaea odorata*, which commenced to bloom the first season, and has continued to throw up hundreds of large perfect flowers every season, and has bloomed continuously this season since the middle of May to the present time and at this writing (August 6) there are quantities of flowers.

Two years ago I constructed two more of these basins and had them planted with *Nymphaea flava* and *N. caerulea*, all of which do well. Last season I cleaned out one of these basins, put in about six inches of very rich earth, and planted a single root of the *Nelumbium speciosum*, which has grown until the little basin is completely filled with it, furnishing this season so far, twenty-six exquisitely colored flowers, from eight to ten inches across, and borne upon foot stalks standing five and six feet above the water and many of the leaves reaching a diameter of eighteen to twenty inches. My interest has so increased in this beautiful gem of the aquatics that I intend to give them more space another season and perfect cultivation.

Our winter season is so mild that no care of the roots is required except to mulch and cover with water. In one of my other basins I deposited last season a single root of *Pontederia crassipes*, which in a short time covered the water, giving some flowers late in the season. A few of the roots were wintered in the tank in the greenhouse and transferred this spring to the basin again, where it has grown into a solid mass, and we have hundreds of the beautiful lavender flowers, short lived it is true, but it blooms so abundantly that we are never without them.

From my experience it will be seen that a number of aquatics can be grown without an aquatic garden, and those who attempt the cultivation of them in half barrel tubs, even, I am sure, will be well rewarded for their trouble.

Macon, Ga. D. B. WOODRUFF.

Dutch Bulbs.

The weather in Holland this summer has been in general cold and rainy like in other countries, and so the season is more backward than ever. The harvesting of bulbs, in consequence, takes place much later than usual, as one of the principal objects in cultivation is to have the bulbs well ripened before taken up, for the flowering qualities may be injured by taking them from the ground at a too early period. So the time that the bulbs and especially hyacinths and narcissus, will be ready to be sent out in a well-ripened and sufficiently dried stock, may be a fortnight later than in other years, when the shipments used to begin early in August. It is reported that several of the leading firms in the bulb trade will not begin sending out their bulbs until they are perfectly fit for the purpose, although it may be at a later period than in former years. This resolution is taken in the interest of the buyers, to supply them with a perfect article. It is to be hoped that this system will be adopted more generally by the growers of bulbs.

✻ ✻ ✻ ✻ ✻ ✻ ✻ ✻ ✻

Boston.

The annual election of officers of the Gardeners' and Florists' Club will take place on the first Tuesday in September.

E. V. Whitten, of Dorchester, is making large additions to his greenhouses.

Jas. Tucker, of Dorchester, has tired of the greenhouse business. His houses have been torn down and the land cut up into house lots.

Mrs. Brooks, of Milton, is going to build large greenhouses and try the florist business. Mr. Thos. Clarke is her gardener.

The greenhouses and other buildings on the estate of the late C. M. Hovey, together with several acres of land have been bought by Wm. E. Doyle, who proposes to rebuild and improve and run the place in connection with his store business.

S. A. B. Rogers has bought Lyman Davenport's greenhouses at Readville. On account of building improvements Mr. Rogers has also moved his florist business from Temple Place to Washington street near the Boston Theater. The greenhouses in the rear of the Art Museum recently occupied by John Gormley, are to be torn down.

The annual excursion of the Gardeners' and Florists' Club took place July 24, and was one of the most enjoyable occasions which the florists have ever attended. Possibly on account of the unfortunate ending of last year's trip, and possibly on account of the coming visit to New York, the number attending the excursion was comparatively small—104 in all—but this did not dampen the spirits of those who went. An enjoyable sail down the harbor brought the excursionists to Long Island, where Mr. John Galvin was taken on board amid much cheering and enthusiasm. Mr. Galvin proceeded to show his appreciation of this flattering reception by performing a jig on the spot, and the band played "Auld Lang Syne." The trip was continued to the outer bay and Minot's Ledge light house and returning to Long Island where a dinner was served on board the boat, after which the city institutions on the island were visited and the younger members engaged in a game of base ball. David Allan and some of his friends undertook to fish for sculpins from the lower deck, but a few well directed volleys of water melon and biscuits soon convinced them of the folly of the undertaking and for a few minutes anarchy reigned. In the meantime the band played, the dancers executed their best steps, and the singers joined in the chorus. Everything went lovely till on the return trip when a stop was made to leave Mr. Galvin at Long Island, and it was found that the boat was stuck fast in the mud. Visions of a tedious wait for high tide were conjured up with much mourning, but in a short time the quarantine boat was seen approaching and soon with a strong pull and a long pull the boys were afloat again. A purse was made up for the good natured captain, who complimented the florists highly and hoped to give them another sail next year. W. J. S.

BURLINGTON, VT.—A floral design received by a graduate of the medical college July 16, from an I. O. O. F. lodge of which he was a member, was the most beautiful ever seen in this city. It was three and one half by four and one half feet, the ground work being a solid bed of white lilies. The three links were worked in different colored flowers and

the letters F. L. T. at the top in blue blossoms. It was placed on an easel at the left of the stage and was greatly admired. Mr. Geo. Cook, of St. Albans, designed and arranged it.

ETHEL BROWNLOW, the new tea-scented rose sent out last year by Messrs. Dickson, is flowering well out of doors, and owing to its erect sturdy habit, is withstanding the rough weather which is disfiguring and dirtying most of the varieties whose flowers are pendulous. The flowers are large, well formed, with petals of great substance and of a pleasing shade of rose with yellowish base.

MRS. GEORGE PAUL.—A bloom of a new seedling Bourbon under this name was staged in their seventy-two at the Crystal Palace by Messrs. Paul & Son on the 7th inst. As shown, the flower was large, well finished and of a very pleasing flesh tint, quite distinct. If only the novelty is worthy of its name, it will prove an invaluable acquisition.

MRS. JOHN LAING.—I notice quite a number of this rose planted in many places. I think it will prove a very profitable rose for both grower and retailer. It is a good healthy grower, free bloomer and of a color that pleases everybody. Lausdowne, Pa. W. W. COLES.

A French Flower Girl.

One of the prettiest girls I saw in France was selling flowers on the grand balcony. Her beauty won her many buyers as well as admirers. Her hair was as dark as a raven's wing, her eyes flashed and softened by turns, her features were as clean as from a sculptor's chisel, her cheeks red roses. However she might be addressed, she answered with a smile, a melodious laugh of pleasure following if she were pleased, a frown clouding her face but adding to her beauty if she would reprove. But she did not lose the evenness of her temper. "I do so want to sell all ze genteelmen flowers," she would say in broken English, with a delicious French accent that stole right through the hearts and into the pocketbooks of some American gentlemen I knew, and to whom she of en turned during the evening, "but I want them to buy for their own goot, not mine. I love ze flowers. They are sweet flowers, lovely flowers;" and her faceran red with blushes like her roses. I gave up thinking of her when I heard next morning that she had a husband whom she regularly whipped twice a day.—*D. A. Orr in Chambersburg Valley Spirit.*

A Gardener Causes a Strike.

Strikes, or "walk-outs," as they are called, are becoming a feature of domestic life. The story goes that Mr. George Westinghouse sent for his gardener one day to do something. The reply came back that the gardener was busy and could not come. Subsequently it was discovered that the confining work upon which he was engaged was a game of poker in the stable. Thereupon the man of culture was summarily discharged. This action brought on a strike in the kitchen, and every servant threatened to quit work unless the gardener was reinstated. This crisis, so unexpected, brought on a compromise, and a truce was proclaimed. But it is plain to see that there is a vast deal of trouble in store.—*Pittsburg Daily.*

GEO. A. SOLLY & SON'S
BOOK OF PLANS

For

Carpet and Ornamental Flower Beds. With many it is a difficult task to lay out a carpet bed, or fancy design on the lawn, and perhaps more difficult to choose the proper plants to harmonize, so as to give the best effects. The object of these drawings is to assist gardeners and amateurs, and to enable them to choose the proper plants for their work. It is expected that this book will supply a long felt want, as it is the first and only publication entirely devoted to Fancy Flower Bed Designs. This, our SECOND EDITION, consists of over 100 designs, finely engraved, on good paper, nicely bound, sent pre-paid to any address on receipt of Price, \$3. GEO. A. SOLLY & SON, SPRINGFIELD, MASS.

Burnt Earth.

I can recommend this for general use. The first illustration of its value which came in my way was when engaged in carrying out a new garden a short time ago. I was greatly surprised upon entering the glass-houses to see the luxuriance and beauty of the young stock of plants, especially of gloxinias, ferns, palms, foliage plants, and cucumbers, and on inquiry I was told that, owing to dearth of silver-sand and leaf-mold, burnt earth had been added liberally to the soils. The most delicate-rooted plants luxuriated in what was little else than crude top-spit loam with a liberal admixture of the burnt earth. It may be well to add that only the very finest siftings had been used. It would seem, therefore, that owners of old town gardens, in which the soil has lost its ordinary mechanical properties, may benefit themselves by partially burning and remixing the soil.

WILLIAM EARLEY.

[The value of this material in promoting root development was shown experimentally by the editor some years ago.—ED.]—*Gardeners' Chronicle*.

The New Zealand Mountain Lily.

(Ranunculus Lyallii.)

A year or two ago Harry Waterer, of Philadelphia, imported and sold a lot of these in this country. At that time it was causing quite a stir in Europe on account of its massive proportions and uncommonly handsome large white anemone-like flowers. But few people succeeded in growing it to perfection and mostly because, they now admit, they coddled it too much. And it was a scarce plant because it is a difficult subject to import alive, and the seeds take from one to three years to germinate; in the case of home grown seed that had been sown as soon as ripe, however, we are informed by English growers that it has germinated in four to six weeks. The London Garden of December 31, 1887, contains a well executed colored plate of this handsome species.

Nicholson calls it the "N. Z. Water Lily," Robinson the "N. Z. Shepherd's Water Lily," and Miller mentions these two names and also that of "Rockwood Lily." Now in an excellent article on the New Zealand buttercups in the Otago (N. Z.) *Witness* of June 15, and just to hand, it is called the "Mountain Lily," and judging from the accompanying description this surely is the most appropriate name.

"Foremost among the species (ranunculus) in size is the well known "Mountain Lily" (R. Lyallii), the largest known member of the family. It occurs plentifully in the mountains of Canterbury and Otago at altitudes varying from 2,000 to 4,500 feet, according to the climate. It is most often found covering old moraines, growing in peat between rocks in situations where the water from melting snow trickles down nearly all the summer. Often it covers many acres of ground showing a fine sheet of white blossoms at the flowering time. In cultivation it is easily grown in any shady situation where a peaty soil can be obtained and abundance of water during early summer. It is not in any sense a bog plant, as so many have supposed, and is easily injured by too much water when not in leaf. The splendid pure white flowers and large saucer-like leaves render this a very attractive plant."

The Stephanotis,

This, in common with other climbers and twiners that either flower from the previous season's growth or an extension of it, should have whatever pruning they require carried out as soon as they have done blooming. Where the shoots of stephanotis that were made the preceding year were shortened to any extent in spring in the way that some plants require, the chances are that few, if any flowers will be forthcoming. When the plants have plenty of root-room, either by giving them large pots or when planted out, they consequently make much growth, and it is more necessary to cut them in freely than when they are less vigorous. The stephanotis will do with its roots much more confined than most things. Even when grown in pots, provided the drainage is good, large specimens will keep on flowering and making growth annually without being repotted. It usually happens that they do better when the soil has got crowded with a mass of roots than they do the season after more room has been given them; but the case of young specimens that have not yet attained the size they are required to, they should not be allowed to go too long without being repotted, as if this happens the top growth will be retarded. It will be better to repot any plants that require more room now than defer the work until spring.—G., in London Garden.

"15 YEARS' EXPERIENCE. THE GURNEY SAVES 33% PER CENT IN FUEL."

Letter from Thomas Gray, of Fitchburg, Mass.,
In reference to

GURNEY HOT-WATER HEATER.

FITCHBURG, MASS., April 13, 1888.
Dear Sir:—In answer to yours, asking my opinion of the Gurney Hot Water Heater which you sold me, would say that I have had fifteen years' experience in heating hot houses by water, and must say the Gurney Heater purchased of you has proved itself a wonder, both in power and economy, using one-third less fuel to get same results than any heater I have ever used. The brick-lined pot I consider a special feature, as it renders combustion equal throughout the entire pot.

Yours truly,

THOMAS GRAY, Florist.

Hot-
Water
Heater.

THE MOST POWERFUL HOT-WATER BOILER EVER CONSTRUCTED.

These Heaters contain mere features for saving fuel and labor, and are better adapted for heating Conservatories, Greenhouses, Dwellings, Offices, Schools and Public Buildings than any other makes of Hot-Water Heaters. By reason of their enormous heating capacity and increased square feet of boiler surface, and positive circulation, they are the only rapid circulating Hot-Water Heaters made. At a test made the 19th of January, 1888, at the works of the A. A. Grilling Iron Co., Jersey City, N. J., (manufacturers of the "BUNDY Radiators") where all the leading makes of Hot-Water Heaters have been tested—more power was developed, with less fuel, than any heater ever tested there. general office at Chicago.

THE AMERICAN ASSOCIATION OF NURSERYMEN.

GEORGE A. SWEET, Danville, N. Y., president;
G. J. CARPENTER, Fairbury, Neb., first vice-pres-
ident; CHARLES A. GREEN, Rochester, N. Y., sec-
retary; A. R. WHITNEY, Franklin Grove, Ill.,
treasurer. The next annual meeting at Chicago
the first week in June, 1889.

THE PRINTED REPORT of the proceed-
ings of the thirteenth annual meeting of
the American Association of Nurserymen,
held at Detroit June last, is received. It
is a neat volume of 91 pages, well printed
on excellent paper and contains the
many valuable essays read at the recent
convention with the discussions on the
same and other business. It is orna-
mented with the portraits of a number of
prominent horticulturists. The report
can be secured by remitting the member-
ship fee of \$2 to Secretary Chas. A. Green,
Rochester, N. Y.

BULLETIN NO. 3 from the Experiment
Station of the College of Agriculture, St.
Anthony's Park, Minn., is received. It
contains reports on "Our Russian apples
at the opening of their fourth season;
nursery stock; natural and artificial fer-
tilization of plants and report on the
Rocky Mountain locusts in Otter Tail
county, Minn." The report on Russian
apples and condition of trees, shrubs and
vines in the nursery after the winter of
1887-1888, should be of considerable in-
terest to nurserymen. Edward D. Porter
is the director in charge.

The Purple Beech as an Avenue and Shade Tree.

The merits of this tree are gradually
becoming more fully appreciated as one
of the most effective ornamental trees
for lawns, parks and avenues. The high
prices at which they sold for many years
deterred planters from using them freely,
but within the last few years prices have
been reduced so that they are now within
the reach of all. The cost of production
has been very considerably decreased
through propagation by inarching instead
of by indoor grafting and by this method
it is possible to grow good standard trees
10 to 12 feet high in a very few years,
suitable for avenue planting and large

enough to intersperse with other decid-
uous trees on the lawn. A well grown
avenue of Purple Beech would certainly
be a magnificent novelty, and as single
specimens it is one of the most symet-
rical trees that we have.

They are slow in recovering from the
check of transplanting and therefore re-
quire careful handling, but after getting
well established they grow as rapidly as
Norway or sugar maples. A specimen
tree on our grounds about forty years old
is two feet in diameter of trunk, fifty feet
high and forty feet in spread of branches,
and is fully as large as a Norway maple
near by of about the same age. The
richness of coloring in the foliage of the
Purple Beech depends largely upon the
thrifiness of the tree and the surround-
ing circumstances. For the finest devel-
opment they require full sunlight and to
be in vigorous growing condition. There-
fore conditions which contribute to the
health and vigor of the tree help to de-
velop the rich dark color. Bone dust or
other animal fertilizer, rotten manure,
water and sunshine are the best tonics for
Purple Beech. SAMUEL C. MOON.

Morrisville, Pa.

Kelsey's Japan Plum in California.

In my wanderings up and down,
through and across this, the Golden
State, as an old gray head student of Hor-
ticulture, I lately was so fortunate as to
stumble in to the Kelsey orchard where
this most remarkable and most valuable
fruit—where it well withstands the win-
ter's cold—was first fruited on this
continent.

This orchard is located on the great
plateau, on which are situated the cities
of Oakland and Berkeley, on the east
coast of the Bay of San Francisco, about
one and a half miles southeast of the
buildings of the University of California,
two miles from the bay, back to and
partly on the foot hills 300 feet above the
bay. There I found 200 to 300 of Kel-
sey's Japan plum trees six to eight years
in orchard, loaded with fruit, ripening
and being gathered for market. I spent
hours carefully studying the fruit and
trees. It so happens that they are a per-
fect object lesson of the variety—low
heads, high heads, pruned and unpruned,
on stocks (roots) of nearly every species
of the almond family, all doing nicely.
I could not see but what it was thriving
on one root as well as the other. It
seemed best both in tree and fruit on the
lighter, drier soil. It seems to withstand
light, rather poor, dry soil better than
any other stone fruit. The tree is a slender
twiggy straggling grower, in looks
half way between the peach and Chicka-
saw plum.

The fruit is about the size of good east-
ern Crawford peaches, broad at the nose

and narrowing to the eye, or reversed
pear shape, the point always curving to
one side. Skin without acerlity, thin,
uneven, covered with a thin bluish white
bloom, color green, rarely entirely cov-
ered with a dull mauve purple when fully
ripe. Flesh meaty, somewhat coarse,
greenish yellow, very juicy, sweet, sub-
acid, rather thin flavor, with an accepta-
ble flavor peculiar to itself. It is consid-
ered a very good fruit by people generally
to eat from hand, personally I should
prefer a good peach, but would accept
the Kelsey I think before any other
plum. Stewed or canned it is said to be
excellent.

It has proven one of the very best
shipping fruits for the eastern market of
this state. Prof. Higgard says: "It is
the only plum I am acquainted with that
may be gathered before quite fully grown
that will ripen up to perfection in the
house. It is the best shipping store
fruit we have, and I think it has a great
and most profitable future in this state.
So far as I can learn it does finely every-
where in the state where the soil is not
too heavy and moist."

It is selling to-day at three times the
price of the best plums at wholesale, but
this is I think owing to its being some-
what of a novelty as yet. But this plum
is "not for Jacob," or those who live
where it is too cold for budded peaches
to be a success. It possibly might do top
worked on hardy Chickasaw plum a little
farther north.

The Kelsey plum was imported from
Japan, the native name was lost, I under-
stand Mr. Kelsey procured the whole
stock, propagated and disseminated it.
So soon as he had it in fruit it created
widespread attention, since it has been
recognized as Bo'ar'io of the Japanese.
There are about five other Japanese
plums varying widely in character that
it is hoped will prove of value. But I
can learn where none of them are in fruit.

This Kelsey orchard of fourteen acres
all in bearing is as it stands to-day a
splendid object lesson in which to study
California horticulture. Being a nursery-
man, Mr. Kelsey gathered here a large
collection of fruits of all species that
would grow here except peaches. The
collection of cherries is very large, also
plums. Here one can learn how he
should prune and how he should not
prune for the best results, and many
other lessons. The orchard of fourteen
acres was sold a year ago to be cut up
into villa tracts for \$30,000. It was fairly
well cultivated last spring, but the trees
were not pruned, as they call cutting
back the exuberant growth here made
in eight months of fine growing weather
in very rich soil. From not having been
properly cut back nearly every branch in
the orchard had to be propped up to pre-
vent them breaking down with their load
of fruit.

Young orchards here on the rich valley soils, having eight mouths of splendid growing weather, will make shoots six to eight feet, yes, often ten to twelve feet in length in a season. The climate exactly suits a great development of fruit buds and fruiting, then if these shoots are not cut back in winter leaving only sixteen to thirty inches, they set fruit their entire length, like a string of onions, and as the fruit develops, down go the branches. They put props under them and they break across the props. Oh, they have lots of fun, but don't have much fruit or tree left. Therefore a thorough cutting back of these branches each and every year so long as such growths make it necessary, is the first great lesson for the tenderfoot fruit grower to learn in California.

On this Kelsey place there are five acres in cherries of many varieties giving this season fifteen tons of fruit, which sold at six cents, or \$300 an acre. If they had three-fourths of them been "Royal Ann," as the Yellow Spanish is known here, the rest Black Tartarian in full bearing the crop would have paid from \$600 to \$800. Apricots, nectarines and peaches yield from \$150 to \$600 an acre. Bartlett and Winter Nelis bring \$100 to \$600. These are simply good average commercial results. An orchardist should, as things look now, and in the far away future, with an orchard of ten to twenty acres surely count on a gross return yearly of \$300 an acre, or \$250 net of any or all the leading commercial fruits. Yet these figures are often doubled. As I said, this Kelsey orchard runs a little way up the foot hills, there the trees and fruits as I saw them were markedly better, and so they would be on up for 1,200 to 1,500 feet, where not too steep to plow and the soil was rich, which it is as a rule on the hills and mountains of this state, I saw just as rich and deep soil yesterday on the mountains back of Berkeley 1,200 feet up as one need ask for.

It is just beginning to dawn on the minds of a few in this state that this rich, high mountain soil in the finest and healthiest climate in the world, where mountain springs, brooks, trout, game, squirrels and flowers abound, is the best for fruits. There are millions of acres of it everywhere that can be had very cheap. Uncle Sam has millions of acres that he will make you a present of. I say let these old fossil valley men have their valleys, give me the hills, the rounded glorious immortal hills. Those who may want further general information of the Golden State by the courtesy of the State Board of Trade I am enabled to mail free, a bulletin of 75 pages describing the state by counties with a good new map. Stamps not refused. No chromos.

San Francisco, Cal.

Damage to Street Trees From Gas.

I would like to know the extent of the liability of city gas companies in cases of the death of street trees caused by the escape of gas from leaky pipes. It is a subject of importance to nurserymen and property owners. Can some one who has had experience in such cases tell what the law is in Philadelphia and in other cities? Also what is the proper course of procedure to establish a claim against such loss, if any.

All communications should be addressed to the
general office at Chicago.

HERE ARE a few words we wish to say to our friends who have been paying good money for our advertising space; and though the topic is an old one we urgently ask a reading of the few points below. We are printing EVERY issue 5,000 copies and do furnish affidavit to that effect. We are sending four-fifths of these to paid subscribers, most of whom have been with us two or three years and who are interested in and read every line of the paper. These readers are florists and buyers and if you sell to such people and have what they buy, we claim to be the best medium in America to reach them, and we can prove it, and have proved it, to every advertiser. Our regular circulation with extra editions of 1,000 or more copies at least ten times per year, and our circulation among seedsmen and nurserymen (who READ it) give it a power and influence few papers can claim. This circulation question is one on which the seedsmen's committee investigated among the horticultural press and gained but little satisfaction. When you are asked for the kind of an advertisement which belongs to the columns of the FLORIST ask when you compare terms with ours what number of READING, BUYING SUBSCRIBERS who need your goods, they can swear to. We know you will find double value in our columns.

The New York Meeting,

Another convention is over and the question will probably be asked by many, what good has been accomplished? Here has been considerable individual expenditure, and with what adequate return?

Various motives inspire the numbers that attend. Some are there purely from love of pleasure; there is the chance of meeting many comrades of convivial habits, "a good time" generally will be the result. These, of course, look upon the business of the convention as purely a secondary affair, in comparison with the pleasures that may be offered for their participation. Others, again, have quite as selfish an object, but still one that may probably tend to the benefit of the society. In common parlance, "have an ax to grind." This is all right and commendable enough when it is kept,

for the time at least, subordinate to the welfare of the society. But when any man seeks to use the gatherings of florists from the country at large, only that he personally may be benefited, he will be of little use in advancing the interests of general horticulture. However, it is to be hoped that the majority attend with the desire of imparting and receiving information; of giving an impetus to professional pursuits and elevating horticulture above its present standard. No better illustration of this can be had than by citing the example of the ex-presidents and the last vice-president of the society. Better men could not be found to occupy these positions; for, combined with ability there is a bona fide love of horticulture as a profession, (not looking upon it merely as a business for the accumulation of money;) also a zealous desire to do all in their power to further the best interests of the international society; and they endeavor, by practical work, to establish all efforts upon a firm and progressive basis. I, for one, take this means of personally recording my gratitude to these gentlemen for the advantages derived, and for the inspiration given, by witnessing their unselfish labors.

Each person must answer the question of recompense individually. The good accomplished depends, in a great measure, upon our own outlook. Go to these meetings with the single thought, "well I am not such a fool as to give persons information that I have gathered by hard labor, let them do as I have done, find it out for themselves," and the answer will surely be, "the whole thing is a farce." But let mutual help be the object, and how much broader is the vision with which we view the work of the society. It is by looking at results in the aggregate and not by criticising details that the question of benefit can be satisfactorily answered.

The good of the whole is the good of the individual. Elevate the body and the members must gain proportionately. With this thought in our minds surely we all can say that great good has been accomplished. The discussion of the many essays stimulates thought, and thought means action. Before the light of knowledge darkness must flee away. Already there is visible greater professional pride. The public denunciation of trickery will ultimately wash away this blot from our reputation. Free and full exposition of the merits of the innumerable varieties of florists' flowers constantly placed upon the market is a means toward a just discrimination. The organization of committees for the examination and selection of the most useful insecticides, pots, fertilizers and other specific essentials for the right practising of the florists' art, is of incalculable benefit to us all.

This limited enumeration but betokens the drift of the society. Its purpose is not to place money *directly* in our purses. In common with all similar societies its aim is improvement—the improvement not alone of the individual but of the class. The society is supplying a long-felt want, and as long as horticulture is practiced, so long will this service be needed. May it continue to meet with the assistance of all the progressive men of the profession—then assuredly will it flourish and become an aid to all inquiring workers.

For future meetings, local committees should take more into consideration the acoustic properties of the hall in which the convention is held. When these are in fault the meetings become tedious to the many. A few around the platform can hear, enjoy and take part, but the majority fails to follow the essayist and therefore soon becomes tired.

Why should all the essays be given to men? Many ladies are excellent horticulturists, and in all matters of taste are competent to be our teachers. We have several ladies who attend the meetings and if one or two of their number should speak to us upon any subject, much additional interest will be given.

Instead of a free excursion, which entails great expense and sometimes is apt to give but little satisfaction, why cannot Friday and Saturday be established as days for the delegates to visit the leading florists of the city and vicinity? There would be much to instruct as well as interest. Many now attend the conventions, and on account of limited time, leave without seeing anything of the standard to which the trade has attained in the city they visit. Those florists desirous of having visitors could furnish the means of transportation, either in some separate way, individually, or collectively, and thus give pleasure as well as profit to both their visitors and themselves. Some will say that such a plan would give rise to jealousy. If properly managed nothing need be done to excite this feeling in any one.

ALFRED E. WHITTLE.

Convention Comments.

Certainly there is a lot of floating wisdom about a florists convention which is not embalmed in the annual report, in the form of casual talk between members. This free exchange of ideas is as valuable in its way as the regular programme. Just notice how much was said—and thought—at the New York convention, about the necessity for thorough education, both practical and theoretical. Mr. Hill, in his admirable address, speaks of the inexplicable failures which sometimes afflict the grower, and for which there seems no remedy. There is no doubt that increase of knowledge will

bring failure to a minimum, though we all know there is no such thing as a dead certainty in the flower trade. One of the greatest advantages of what is termed scientific education is the close and accurate observation it teaches. But I fear a person trained in an experimental garden would hardly keep up with the procession as a florist, until he had gained much actual experience in a commercial place.

Some very good things were said about the apprentice system in educating growers. Very few men want nowadays to take inexperienced boys into their houses—they think, as one speaker said, that one boy is a boy, two boys half a boy, and three boys no boy at all. If they are paid decent wages, their employer cannot afford to teach them the business thoroughly into the bargain, and he always has the fear that as soon as they begin to know enough to be of much use, they will go off and leave him in the lurch. Most of our cleverest growers of the older generation began work as apprentices in some of the famous old world nurseries, on a salary of six or eight shillings a week. Their living was not actually luxurious, but they acquired an all round knowledge of plants and how to grow them, such as it is difficult to get now, because growers are apt to run to one specialty. It seems as if the best education for a florist or grower could be acquired in a big commercial place, with sufficient leisure to study scientific authorities and—be it said—attend horticultural conventions. A good many seem afraid lest this talk about science should lessen the belief in practical work, but you will notice that the men who strenuously urge the former add to it the industrious practice of the latter.

Everyone declares that this convention could not be improved upon in harmony and sociability. The fact that the social part of the occasion was so arranged that it did not interfere with the business added much to the general satisfaction. Mr. Jansen's luncheon was a delightful event; his many guests feel that they cannot sufficiently express their thanks for the courtesies extended by the host and his charming wife, who received them with such frank cordiality. The unique arrangements in basket work used on the table were very much admired, and everyone present felt that Messrs. Craig, May and Jordan expressed the general sentiment in their impromptu speeches.

The trip to Staten Island, where about one hundred delegates interviewed "Nero," was much enjoyed in spite of the chilly night.

The exhibition, though not over remarkable, may really be considered unusually good for the season—August is the most trying month of the twelve for a flower show. The floral designs were really the most disappointing part, but it seems almost impossible to obtain a large display in this department. There is no doubt that the awards were made with great fairness and discretion; but while much of the work was good, little of it was remarkable for originality. Some of the exhibitors would have been much benefitted by a careful study of Mr. Battles' essay. Mr. John Hughes' caladiums took a good share of attention; they were superb show plants.

Several of the outsiders seemed to labor under the impression conveyed by a daily paper, that Mr. Asmus had refrigerated the blooming plants of lily since last December. Someone expressed a doubt whether we should commence the blooming of these flowers at such an unnatural

season. Why not? Wherein does it differ from the right to produce Jacquemont roses at Christmas? At any rate, if buyers insist on lily of the valley in August, progressive growers like Mr. Asmus will endeavor to supply them. It always saddens a person with any artistic feeling to see aniline immortelles, tin wreaths and such truck at an horticultural exhibition, but there is a certain demand for such things, and, as one dealer said, "If we don't supply them someone else will." These tin designs are not nearly so hideous as they used to be, but they can't be called beautiful, and they certainly hurt the flower trade. One large dealer says he always discourages florists from buying such things, telling them that they certainly spoil the trade for cut flowers, but until the public is educated above using them they must be sold. Some imported designs in French artificial flowers exhibited by W. C. Krick were certainly beautiful, though suggestive of Palais Royal millinery. They were not expected to come in competition with natural flowers, being intended as souvenirs of special occasions. Certainly the dealers in florists' supplies excelled themselves in their exhibits; they were without exception both extensive and well arranged. Mr. Vaughan's holly had a very pretty effect; it was a little surprising to see it in August.

Philadelphia made a fine showing in the presentation of the official programme, and the delegates from that placid city display an amount of brotherly love in their treatment of one another which commends them very warmly to their friends.

The society is to be much congratulated on its selection of officers. There is no doubt we shall see an equally interesting meeting next year, probably with even larger attendance.

EMILY LOUISE TAPLIN.

Scientific Education for Florists.

In a report of the recent convention of the Society of American Florists, published in the New York *Sun* of August 22, appears the following, which I quote: "Nearly all the speakers pitched into the agricultural chemists during the discussion that followed the paper on the benefits of a scientific education for a florist." "If ever there was a set of humbugs," said Mr. Allen, "it is the agricultural chemists. These men pretend to analyze a soil and tell you what you must put in it to grow each kind of plant."

It is not unlikely that Mr. Allen was incorrectly reported, certainly I hope so. I think I am reasonably familiar with the views entertained by agricultural chemists, and I am sure that the above statement entirely misrepresents the views of any of them. I know of no one of this class who will pretend, by analysis of a soil, to tell what must be put into it in order to grow any kind of plant. We, however, can confidently predict that, without the addition of certain constituents to certain soils certain plants cannot be successfully grown, but this is quite another thing, as your readers, I think, will admit. It is unfortunate, however, that a body so intelligent as the Society of American Florists, who have already accomplished so much by methods which, whether they acknowledge it or even know it, are, in the highest degree, strictly scientific, should permit those who are disposed to pitch into a scientific education for the florists to apparently have a monopoly of the discussion, as

would appear from the *Sun*. This is the more regrettable, especially since the president of the society, in his admirable address, takes such an enlightened view as to the necessity for science as a guide to the solution of the problems besetting the practical florist.

PERIN COLLIER.

Geneva, N. Y., Aug. 29, 1888.

[While Mr. Allen did use the language quoted, he afterward qualified it when Mr. Taylor reminded him that the chemists did not pretend to be able to tell what to add to a soil to grow certain plants—and acknowledged that he had erred in that statement. The *Sun's* statement that "nearly all the speakers pitched into the agricultural chemists," is incorrect. To the best of our recollection Messrs. Allen and Taylor were the only ones who referred to them in any way.

The great benefits of a scientific education in connection with a thorough knowledge of all practical details of our business were admitted by nearly all present. No man in his right mind will deny that education is a benefit; the question is upon the best manner of securing it and what branches of science it will best repay the florist to acquire a knowledge of. As the writer stated during the discussion, "If you want to be \$25 or \$30 a month employee all your lives, make no effort to acquire a thorough education; but if you want to rise, if you want to get near the top and be somebody, spare no effort."—ED.]

John N. May.

John N. May, the fourth president of the Society of American Florists, was born in Middlesex, England, where his father was a gardener. He is a descendant of an old Yorkshire family, who for several generations have been nurserymen and florists in that county.

At the early age of 9 years the subject of this sketch displayed his love for the queen of flowers in a rather peculiar way. His father one day brought into the house a fine bloom of *Souvenir de la Malmaison*—then a new rose—to show his mother. After listening to their praises of its lovely color and fragrance he resolved to have one of his own, and after watching carefully the *modus operandi* of budding, as practised by one of his father's assistants, he "borrowed" two eyes of the rose named (the time for returning them was, we understand, never mentioned), and finding a stock of the dog-rose in a hedge near by, he managed to set and bandage both eyes, and strange to relate one of them grew and bloomed the following summer.

From that day to this, the rose has been his favorite flower, and we doubt if any have surpassed him in its cultivation, particularly in the forcing of bloom under glass.

At the age of 14 years he was apprenticed to the late J. B. Whiting, of the Deepdene Dorking, Surrey, who was at that time well known as one of the best practical gardeners in England. After serving his time there, he served in several large places, principally in the north of England, in various capacities—as journeyman, foreman and head-gardener, till in 1869 he landed in America. After working in various places in Canada and Vermont he finally located in Madison, N. J., where he shortly took charge of the rose growing establishment of the late E. V. Haughwout, and where he remained till April, 1880, when

JOHN N. MAY.

he started in business for himself at Summit, N. J.

Mr. May is a very busy man, attending personally to the details of his large rose growing establishment at Summit, and has often remarked to his friends that he has never been idle or out of employment a single day since he was 14 years of age. The unceasing care and attention to his business is undoubtedly what has brought him success.

Mr. May has been an enthusiastic worker for the Society of American Florists ever since its birth. He has spared neither time nor money to advance its interests, and we are pleased to record that he was elected to the most responsible and honorable office in the gift of the society by a large plurality on the first ballot, which was afterwards made a unanimous vote.

H. B. GRIFFING, the well known implement dealer of New York, died suddenly August 18.

A Farewell Dinner at Boston.

It does not often happen that a young man makes by his own ability and high personal qualities in so short a time such a host of warm friends as has Mr. W. A. Manda during the few years in which he has been connected with the Harvard Botanic Garden. It is particularly noticeable here because of the conservatism which is so strongly marked in these older communities. That a young man of but twenty-five could come here and creditably fill such a position and at once win the respect and good will of all our most prominent horticulturists, most of them being much older and all of different nationalities from his own, is a record of which Mr. Manda may well feel proud.

Never in so short a time has any man done more for the Botanic Garden, and what he has done has been accomplished with but slight encouragement and wavering support from those in control, and too often, indeed, in spite of actual opposition. It was evident some time ago

that the man was greater than the place he was expected to fill, and through short-sighted policy he has been allowed to go. It will be conceded by his predecessors, and it is no unfairness to his successors, whoever they may be, to say that Harvard College may have to hunt a long time before a man can be found with equal ability to carry forward the work and to do as well his share towards making the Botanic Garden a place worthy of the name. It was a thorough appreciation of the worth of the man, and of the loss which Boston and its horticultural interests sustain by his leaving here, that prompted a large number of the gardener and florist friends of Mr. Manda to tender him a farewell dinner Aug. 11.

The occasion was a success in every way, and it must have been most gratifying to Mr. Manda to receive such a spontaneous and hearty testimonial of friendship and esteem. All branches of the business were represented, and every one present had a word to say of regret at the loss of one of their number and of sincere good wishes for his future prosperity. Gardeners almost always manage to look at the bright side of everything, and although all felt keenly the separation about to take place, yet they succeeded in making the occasion a most enjoyable one, which will be long remembered by all who were fortunate enough to be present.

The undertaking in which Mr. Manda is interested, and which will, in due time, be brought to the attention of the profession throughout this country is one which, with his ambition, experience and energy, and the assurance of abundant capital, promises well, and no doubt every effort will be made to make it worthy to rank with some of the famous establishments of the old world. There is a splendid field in this country, the work will be in good hands, and it is to be hoped will meet with a generous and hearty support from the American trade.

WM. J. STEWART.

Les Halles Centrales of Paris.

The market halls of Europe's second largest city, afford a subject of interesting study to the visitor of the great French capital, especially when watched from the hour of opening in the morning at 2, until 8 a. m., when the wholesale business for the day is done and the retailing to the public begins.

Even Paris is asleep for a few hours at the night in some of its quarters and the traveler when winding his way from the hotel to the Halles Centrales at this early hour, is often for blocks the only living being seen, and feels isolated in the dark streets where every other lantern only, sends a ray of light to show him the way, and policemen belong to the realm of imagination, until the rue de Turbigo is reached, where voices and the noise of passing vehicles assure him that the town is not owned by him alone. A walk the entire length of this street for about ten minutes reveals to him on his left an open space illuminated with electric lights and a building of imposing size, surrounded by farmers' wagons and mounds of garden truck, assuring him that he has reached the looked-for spot where Paris is supplied with food.

Waiting to take in the imposing sight of bustling humanity behind ramparts of carrots, built three and a half and four feet high, as many feet wide, and the head of one or two French farmer's daughters peeping from behind each, ready to sell to whoever may come;

with similar fortification works compiled of either cabbages, artichokes, radishes, lettuce or beans and other vegetables of the season, but all presided over by females; thus lining the sidewalks leading to the Halles as well as the sidewalks around the entire buildings. The visitor takes his time, and needs time, for this is a sight to be beheld only in Paris, and no where else but in Paris.

What ruddy faces, what healthy forms in simple dress contrasting to the languid, pale looks of the humanity which fill the streets later in the day, after 1 p. m. It seems that women are the salesmen in France, for the business must be done with madame or mademoiselle whilst the husband or father, in his blue blouse, of well-fed stature, attends to the loading or unloading of his vehicle and then starts a chat with a neighbor over his pipe and leaves the sale entirely to his ladies, who apparently know more about selling them than he does. How attractively is everything offered by them; with the peculiar taste belonging to the Frenchmen, every one strives to outdo his or her neighbor in the presentation of the goods they offer, and even an American could, for a moment, be tempted to invest in garlic, if only to buy because the nasty but healthy article is offered in such a pleasant manner and inviting style, which the French call "chic."

However, the moments fly, and if, before the halls are filled, ideas of their size are to be formed, it is time to examine closer and start measuring. The principal street dividing the Halles into two wings, is the rue des Halles. It would be called in the states an avenue, for its two sidewalks measure each thirteen paces, the width of the street twenty-three paces (as taken in ordinary gait). To the right and left of this avenue are on each side five city blocks with the streets separating each block, showing sidewalks eight paces and the width of the street twenty paces; but all these streets and blocks are covered with a spanned glass roof and iron frame work, forming in all ten pavilions used for the accommodation of the sundry articles. Meats, fowls and fish occupy one wing of five pavilions. Butter, eggs, cheese and fruit fill the other wing. The wide sidewalks are used by the garden truckers, and the entrances to the Halles have been captured by the flower trade, who, for a block in either direction of the many entrances, usurp the covered sidewalk traffic. And what amount of flowers does Paris use!

Here in the dim dawn of morning—for it has become 4 o'clock and the lights are extinguished—are seen endless rows of wicker baskets about four feet long and three feet wide by one and a half feet high, and women and men busy undoing them and revealing their contents, which prove to be roses done up in bundles of twenty-four of a kind, cut fully ten to eighteen inches long according to variety, and bundled into square—not round—shape, thus using every cubic measure contents of their basket without waste, for it is 10 centimes or two cents American money, market fee they pay for each basket, and the market regulations call for baskets of a half cubic meter in size, no larger. The rosieristes (about forty on an average a day, I was told by one of them) cluster together as near as they can so as to watch the prices better, and observe the available stocks easier. They evade getting mixed in between the florists or dealers in miscellaneous flowers. These likewise try to centralize according to the goods they

have to offer for the day, and they also bring their goods in square shaped bunches into market, fifteen of which will fill a basket as described above (or about 6x8 inches each bunch) be they myosotis, mignonette, phloxes, carnations, asters or other varieties of flowers.

Truly a number of flowers are brought here to market and find their buyer which would never sell in the New York market. However, the French are fond of flowers, they know how to make a show; flowers and plants are indispensable for a successful show and this accounts for the fact that according to the station in life of the individual, he will buy for his show window the choicest of Paul Neyron roses for \$2.50 the bundle to a pack of myosotis for 60 centimes. It is the butcher, the baker, the restaurant keeper and hotel clerk, who with the florist, who keeps shop and arranges floral pieces, are the first to buy their roses, mignonette, myosotis, chrysanthemums, phloxes, gladioli, pansies, dahlia's, stocks, gypsophilas, etc., etc., in assortment of packs or bundles of each, to make their shops or tables more attractive.

Besides the thirty to forty rosieristes, the Halles have a daily custom of 100 to 120 florists (growers we should call them) who run from six to ten baskets into the Halles each. "What do you do with your unsold stocks of flowers," I asked a man, "when the hour of retailing strikes?" "That never happens, all of us are sold out before that time. Why, those who tie the bouquets during the day need material and we never get left. It is only the growers of plants who come here on Wednesdays and Saturdays who occasionally have to take some of their stock back home." "Well how do you get along with the rest of your brothers in trade, does it not inconvenience you to stand almost shoulder to shoulder and basket to basket and compete?" "Why, no sir; we understand each other perfectly, and when one is sold out it is not at all unusual for the other if the goods are worth anything to help the one who still has unsold goods on hand. Of course every one likes to dispose of his goods first, but we live as if we were one family. A pipe of tobacco or an occasional drink together squares up for the service we owe to each other; every one of us may come in the unlucky boat, and if we keep and stick together none of us need be a loser."

This plain talk convinced me that unity of purpose carried out to the exclusion of selfishness, must be a safeguard against loss in all mutual undertakings, such as flower markets, horticultural societies, etc., and the question to florists in the states will be: How to exclude selfishness from their midst; also the natural generosity weakens with advancing luck and fortune in the individual, who longs for more and more and will never be satisfied.

But the bustle of the market does not stop at reflections; with the advancing hours new industries open their departments and they resume the activity of the day before, and with the facteurs or commission men. We find that these immense buildings, covering ten city blocks—none smaller than sixty-five paces in breadth by eighty paces in length, are supplied with cellar room giving storage facilities to the height of twelve feet! No wonder that with such dimensions the place has acquired a world-wide reputation. Still fearing that with increasing population the market halls may prove inadequate, the municipi-

ality is erecting a new building of similar size to the present one but more ornamental, which it will take, however, many months before this can be turned into public use. The increasing rush and humdrum of the vendors in the street as the day advances, proves that more accommodations are but acceptable.

If ever a city feels the necessity of enlarging its market facilities, it will not go amiss if the commission having matters in hand are sent to Paris to study up this model market in the world as seen by a

TRAVELER.

Philadelphia.

At a recent meeting of the local Florists' Club Sept. 4, John Westcott, Edwin Lonsdale and John Nesbit were appointed as a "committee on club house," the intention of the society being to purchase a house in an eligible location and alter and fit it up for the purposes of the club.

Thomas Cartledge, Robert Craig and William K. Harris were selected as a committee to take steps towards having the club incorporated. It was determined to discuss at the next meeting "whether or not a wholesale market for the sale of cut flowers and plants would be a benefit to the trade in general," the discussion to be opened by Edwin Lonsdale.

The present officers—Robt. Craig, president; C. D. Ball, vice-president; D. D. L. Farson, secretary, and Thomas Cartledge, treasurer, were re-nominated, the election being fixed for the October meeting.

The chrysanthemum show to be held by the Germantown Hort. society will be held in Germantown Nov. 8 and 9. The premiums amount to \$200. Thos. B. Meehan is secretary.

Boston.

Massachusetts sent sixty delegates to the New York convention.

There were heavy frosts all over this section on the night of Sept. 6. Coleuses and other tender plants were badly injured.

The annual exhibition of the Massachusetts Horticultural society will be held at Horticultural Hall, Boston, on Sept. 18, 19, 20 and 21.

The floral establishment of the late Alex. Greenlaw at Braintree has been sold to Thos. Waterworth. Mr. Waterworth will grow roses, carnations, smilax, etc., for the Boston market.

E. G. Hill, M. A. Hunt, J. M. Jordan and several others of the Western fraternity, made a flying trip to Boston previous to the New York meeting. This was Mr. Hill's first visit to the hub, but, after his experience with an old-fashioned Nantasket Beach clam bake, he declares he will be a frequent visitor henceforth, and we hope he will.

The annual meeting of the Gardeners' and Florists' club was held on Sept. 4. Officers for the ensuing year were elected as follows: Pres., Benj. Grey; Vice Pres., Jas. Morton; Treas., Jas. O'Brien; Rec. Secretary, J. H. Dillon; Fin. Secretary, W. H. Elliott; Executive Committee, M. H. Norton, W. J. Stewart, A. P. Calder, Thos. A. Cox. A committee was appointed to arrange for a fitting observance of the second anniversary of the formation of the club next December.

On Saturday, Aug. 11, the garden committee of Mass. Hort. society paid a visit to the beautiful estate of R. M. Pratt, Esq., at Watertown, over which Mr. David Allan presides as gardener. This trip, coming immediately after the dinner

PRIZE "ORIGINAL FLORAL DESIGN" AT THE NEW YORK EXHIBITION.

given to Mr. Manda, an invitation was extended to the gentlemen present at that dinner to visit Mr. Allan at the same time. The garden committee proceeded in horse cars, but Mr. M. Norton, who is always on hand when a good time is in progress, proposed that a coach and pair would be about the proper thing for the boys to indulge in. This plan met with unanimous approval, and in a short time a conveyance was secured with Manda, Dawson and Fostermann outside and Norton, Harris, Becker, Greaves, Grey and Stewart on the inside, a start was made. The weather was perfect and the ride through the Back Bay Park, Brighton and Watertown was hugely enjoyed. No opportunity for fun was missed, and the boys on the outside whose legs formed a prominent part of the view through the front window, became the object of much attention from the inside passengers, and the way those legs did dance was a marvel. The party arrived at its destination just in time for a delicious lunch at Mr. Allan's house. Heaping dishes of Black Hamburgs and Muscats are not encountered every day, and this part of the entertainment received its full share of attention, but there was enough for all. After the lunch Mr. Allan conducted his guests through the beautiful grounds where the well-trimmed lawns and rich flower beds were duly admired, and into the greenhouses where masses of choice ferns, groups of showy *odontoglossums*, and gorgeous *crotons* attract the eye; to the graperies, where the tempting clusters hang in profusion, and those other houses so uninteresting to the uninitiated, but so full of meaning to those who understand, where, on the benches, the stumpy looking orchids are perfecting their bulbs, and up above the *Dendrobium Wardianums* are reaching out their slender arms with a vigor which promises great results for next year. The return trip in the evening was a repetition of the ride out, excepting that Mr.

Fosterman judiciously pre-empted a seat on the inside this time. The party inside was farther augmented by the addition of Jim Barrett, whose massive proportions almost filled up one end of the coach, but who atoned for the space he occupied by his interesting reminiscences of old times, and by Mr. Storer, the orchid painter, whose rotund little figure was squeezed into about half size in the corner seat, and who opened his blue eyes in wonder at the youthful animation displayed by his gray-headed fellow-passengers. He had been induced to join the party on a promise that they would reach town in time for his early train home; but, alas, the station was reached just in time to see the train slide out. But if some of them did have to take late trains that night it was a consolation to feel that some good had been accomplished; for, according to Ben. Grey, who is always deferred to as an authority, "If somebody did not patronize the late trains once in a while, the railroads could not afford to run them." And that is pretty good logic. W. J. S.

Prize "Original Floral Design" at the New York Exhibition.

This was a large, low, round basket with high handle, containing a mass of adiantum ferns into which were set three sun-hats, one containing longiflorum lilies and lily of the valley, another pink hydrangeas and Watterville roses while the third held blue hydrangeas and Perle roses with a variety of orchids. From the center rose a handsome bunch of long-stemmed American Beauty roses, and a beautiful spray of orchids was tied to the handle with a large bow of very wide white ribbon. The piece was very handsome. It was arranged by C. F. Klunder, New York, and received the prize of \$50 offered by the New York club.

Baltimore Odds and Ends.

The cut flower trade in Baltimore has been excellent this summer, according to the testimony of our principal dealers. Prices and the volume of trade have been more satisfactory than in previous years, while the prospects for a good fall and winter trade are very encouraging. The increasing demand for pot plants during the past two or three seasons has given an impetus to this branch of the business, and our growers are making special efforts to meet the demands of the coming season. One trouble heretofore has been that a good many of the plants offered for sale by our florists were too large to answer the desired purpose—the generality of buyers don't care about a big specimen; they much prefer a clean, healthy and medium sized plant. Last winter one of our wide-awake florists had on hand a splendid stock of palms, ferns, pandanus, dracanas, etc., in 4, 5 and 6-inch pots. They were mostly grown in the two former sizes, however, and, although he carried a large stock, he found it entirely inadequate to the demand. A very respectable plant may be grown in a 4 or 5-inch pot, with the additional advantage that they can be sold at a reasonable price—quite an object with the average customer.

A veteran florist, talking with me on the past, present and future of floriculture, deplored the over-crowded condition of the trade; but, my masters, the florist business is only over-crowded in the same sense as all other vocations; that is, at the bottom. There is always room at the top, and there is plenty of room in the trade to day for the specialist. I do not believe that any florist is equally capable in all the departments of his business; there is always some particular branch for which he possesses especial fitness and talent, and it would—in many cases—be better for the trade in general, and himself in particular, if he were to confine his efforts to a thorough working up of that special line whatever it may be. Let a man confine himself to growing a certain class of plants; let him even take up two or three things, and if he does them well he is certain to establish a successful business. The florist trade is overcrowded with men striving to transact a general business from which too many of them derive but a scant income and a majority of whom might easily acquire an enviable reputation and a comfortable independence by simply restricting their practice to that branch of the business for which they possess most aptitude. We have in the trade to-day living examples of the success which may be achieved by those who devote themselves earnestly to attaining prominence and excellence in some particular department, and we are satisfied that an increase in the number of trade specialists would be a very decided advantage to all concerned.

It isn't pleasant to look forward to some notable event for a whole year and in the end to miss it, so that a good many Baltimore florists who had been anticipating the New York meeting were much disappointed that for one reason or another they could not attend, and the convention reports thus far received only serve to increase the disappointment. The S. A. F. may well congratulate itself on its choice for president. There are few men better fitted for the position, and in view of Mr. May's elevation to the presidency the following may not be out of order: Some time ago Mr. May happened to be present at a meeting

of the Baltimore Florist Club, and just before the meeting adjourned he made a very pleasing and appropriate address. As I was leaving the building after the meeting a member of the club said to me: "Say, who was that stranger that spoke last?" I informed the brother that the gentleman to whom he referred was the notorious J. N. May, of Summit, N. J., vice-president of the S. A. F., &c., &c., &c. My friend fortified himself with a piece of "three-ply," and then remarked, "Well, he doesn't look overly smart, but he's a fine talker."

Sept. 4, 1888. A. W. M.

Boston Plant Notes.

BY WM. FALCONER.

LAPAGERIAS.—At Mr. Gardiner's I noticed a handy way of treating the lapageria. The cool orchid house is a north-facing lean-to structure, and against the south side of the wall is another lean-to greenhouse. In the orchid house the pathway is along side of the wall. The lapagerias are planted in boxes in the south-facing house and the vines introduced to the cool house through a long narrow aperture near the ground in the wall, and they are then spread out along the face of the wall also along the roof over the pathway but not over the orchids.

KEMPFER'S IRISES.—At Mr. Gardiner's these are grown with the utmost care and in Japanese fashion. An oblong square bed has been made for them on the side of a hill. The bed is level, and sunk some ten inches below the level of the ground and consists of good loamy soil annually enriched by a coating of rotted cow manure. The irises are set out in rows across the bed, each row consisting of one variety. A perforated water-pipe is laid along the back of the bed, and beginning in May, and lasting through the summer season, the water is turned on for several hours a day, enough to flood the bed a few inches deep. Of course when I saw them (August 1st) the flooding season was about past and I could form no idea of the size, magnificence and perfection of the blossoms produced under this generous care, still judging from the blossoms that I did see I am convinced that we need not go further than the nursery fields at Queens or Passaic to find as good varieties, single or double, white, purple, marbled or pencilled as we can import from Japan.

DAVID ALLAN grows the soft-wooded Cape Heaths extensively for cut flowers and dwells particularly upon *Wilmorea* and its variety *superba*, also *hyemalis*. They are now planted out in the open garden on a gentle slope in strong gravelly loam. By planting them out in summer he gets stockier and healthier plants and with less trouble than he did by summering them in pots.

AT OAKLEY *Lilium auratum* and *L. Batemanæ* are considerably used as pot plants, and are now in bloom in the conservatories. So far as *auratum* is concerned I am inclined to believe that the only way we can depend upon them is as pot plants, for in the open garden they are apt to die out or become diseased, which is not the case when grown in pots. But Bateman's lily has always behaved itself well with me as an out-door lily, neither dying out nor becoming diseased.

DEEP SUNK frame pits are used a good deal around Boston for growing young and moderate sized plants of crotons, dracenas, marantas and some other tropical plants, also *encharis*, and David

Allan likewise uses them for gymno-gramma ferns. In the early summer a hot bed is made in these frames to help start the plants, but by this time the manure heat is all gone. The plants are raised too near the glass or lowered as growth demands. The sashes are shaded and although tilted up a little during warm sunshine, the frames are kept rather close and warm to encourage growth.

PRIMULA OBCONICA.—"As soon as I can get up stock enough of that primrose I'm going to give up growing the other Chinese sorts," said one of the Boston gardeners. Everybody seems to have gone into raising it for cut flowers in winter. Peter Fisher has it in thousands and Manda has sent large quantities of it ahead of him to Jersey.

AMONG THE many handsome ferns I noticed at David Allan's I first saw the crested form of *Pteris cretica albo-lineata*. *Nephrolepis Bausei* is also a distinct new sort with the pinnae of the fronds bi-pinnatifid instead of entire. It makes a handsome pot or basket plant. A more vigorous species is the handsome *Nephrolepis rufescens tripinnatifida* from the Fiji Islands. The fronds are tufted, erect or sub-erect, two to three feet high; the stipes and rachides are red-brown and covered with rusty hair, and the pinnae much divided.

AMONG Mr. Hunnewell's ferns nothing pleased me more than did *Davallia tenuifolia Veitchiana* grown as a basket plant in a warm greenhouse. The fronds are long, airy, graceful and bend over the basket with a fine lace-like elegance. The stipes are redder and the pinnae longer and more slender than we find them in the species. The specimen was about five feet across.

CHÆNOSTOMA HISPIDA is a little South African plant, somewhat fragrant throughout and bearing a perpetual crop of small white flowers. A few years ago our florists introduced and pushed it, but the enthusiasm soon died out. I see it used by Mr. Harris with pretty good effect; he plants or plunges it out of doors in summer and where it forms neat little blossom-studded clumps.

THE VARIEGATED leaved box elder is one of the brightest and most distinctly variegated of all trees, but, unfortunately, towards the end of July its foliage always gets sun-scalded; but the plants are hardy enough. There are a good many of them, some a dozen or more feet high and bushy, planted at Wellesley, but "it is always the same; after this time of year they never escape," said Mr. Harris.

MR. HARRIS has grown the yellow lantana known as *L. Californica* in standard fashion about three feet high. In this way it forms very dense yellow heads and shows no inclination to burst forth into heavy vigorous shoots as we often find the grosser lantanas do. He uses them in his flower beds and carpets under them with other plants in like manner as he does with taller standards of other sorts.

"Do you see that Norway Spruce tree in the lawn over there? Well, four years ago it looked sick enough, but since that time I have given it twelve loads of manure, three every year, and spread broadcast on the ground. Now it looks well and vigorous enough. I believe most of the sick spruces in the east are suffering of starvation," said Mr. Harris.

DRACÆNA MONSTROSA is one of Mr. Harris' seedlings, of very dense, at the same time, robust habit; the leaves are

dark copper colored, seven inches wide and recurved. Mr. H. regards it as one of the finest he ever raised. He also has got the variegated leaved *D. fragrans* very fine. He says it will remain in good condition as a house plant as long as will the plain-leaved sort, and in order to bring out its variegation in its most pronounced state, keep the plants well pot-bound.

ONE OF THE PRETTIEST new features about Mr. Hunnewell's beautiful garden is an out-door tropical water-lily tank. It is an oblong square, cement-walled tank built to the ground level on a sunny bank out side of but alongside one of the greenhouses, and heated with a hot water pipe from this greenhouse. It is fifty feet long, twelve feet wide and three feet deep, and although only one year in use already suggests the fact that it isn't big enough to accommodate the many noble nymphæas and nelumbiums now common to our gardens. About a foot deep of rotted pasture loam and cow manure is the compost used in the tank, and this fresh earth together with the warm water have given the aquatics an impetus and vigor seldom exceeded.

THE CONSERVATORIES attached to Mr. Hunnewell's mansion consist of two parts partitioned off for orchids in bloom, a tall house for ferns, palms and fine-leaved plants and a spacious area open on the sides and with a cloth awning over the top. Herein are arranged a large assortment of plants in bloom and growing in pots. Regular successions of plants are produced at the greenhouses for supplying these gay conservatories. Just now the chief plants in flower are tuberous begonias, fuchsias, hydrangeas, lilies of sorts, gloxinias and achimenes. *Caladiums*, *dracenas* and other fine-leaved plants add to the display of color. Along the outer margin and by the stone edge of this open conservatory the yellow leaved *nasturtium* is used to better advantage than I ever before saw it; it is arranged to form one unbroken dense yellow edging resting on the stone curbing. No flowers are allowed to grow. Among the many orchids in bloom *Cattleya superba*, *gigas* and *Dowiana* and *Dendrobium Jamesianum* were particularly fine.

THE ITALIAN garden, or garden of clipped trees, at Mr. Hunnewell's, is the most extensive and pronounced garden of the sort that I know of in the country, and the one shown in the right hand corner of the illustrated heading of the *FLORIST*. This garden is arranged on the steep slope of a very high bank, with the beautiful Waban Lake at its base and the wooded hills near Wellesley College across the lake. In order to better accommodate the trees the bank has been laid off in a series of narrow terraces. The trees and shrubs are clipped into many forms, and some of them are as high as forty feet. Among the trees used in this topiary work are the hemlock, white and Norway spruces, white pine, *Retinospora pisifera* in variety, also *R. obtusa* and *R. squarrosa*, American arbor vitae, and the *Cracow juniper*. Deciduous trees include European larch, beech, Norway maple, box elder and linden. The white pines are the highest and some of them have light distinct green collars above the pedestal; the hemlock spruce is most used for hedges, and near the top of the bank weeping beeches have been planted on the slope. Irish yews in tubs are disposed along the terrace walls, and on the wall at the top of the bank agaves in vases are arranged.

TABLE CENTER-PIECE.

ers—but all without a fixed purpose.

THE CARPETING PLANTS mostly used in the gardens about Boston are alternantheras of sorts, crimson-leaved oxalis, variegated-leaved Mesembryanthemum cordifolium and Sedum carnenm, white and blue dwarf lobelias, santolina, dwarf sweet alyssum, the dwarf pilea, the silvery-leaved dwarf antennaria, dwarf blue kleinia (senecio), echeverias and houseleeks. Mr. Robinson uses Sedum Hispanicum a good deal, he had it under the name of S. Mehani, but there is no such a species as S. Mehani, notwithstanding how often we find this name in recent works. I didn't notice Leucophyta Brownei anywhere, and I am glad of it, for I never yet have seen a patch of it in real good condition. Mr. Robinson also uses Crassala Bolusii with good effect. All manner of cactuses and other succulents are used individually or in groups in carpet beds.

Table Center-Piece.

The table center-piece of which we give an illustration was exhibited, at the New York show, held in connection with the recent convention.

It was about three feet long by eighteen inches wide, the base a mass of adiantum ferns—plants plunged in moss—with a number of small palms in the center as shown. At each end long stemmed American Beauty roses were gracefully interspersed, so as to allow each individual rose to show its full beauty. It was a very handsome piece of work, showing most excellent taste in arrangement. Mr. John Finn, of New York, was the exhibitor.

We believe that this style of arrangement, while not new in eastern cities, is destined to have a long run with the purchasers of floral decorations throughout the country, and that those who have not yet used it will benefit both their customers and themselves by introducing it in their city. People of taste at once appreciate a departure from the stiff formal designs so long in vogue, and could see far more real beauty in a graceful arrangement of this character.

We do not believe in endeavoring to

force any special arrangement upon a customer, rather consult his taste as fully as possible, but we do believe that in offering an arrangement of this kind it will be greatly appreciated by a majority of the best flower buyers in preference to any set table design. Show your customers our illustration and ask if they would not like something of this kind.

A decoration of this character is also more satisfactory to the buyer, from the fact that the ferns and palms can be kept in fair condition for a week at least after the flowers have faded and been removed, or the palms could be returned and the cost thereby reduced to some extent.

How Shall We Judge the Merits of Designs at Exhibitions?

In a short time the different horticultural societies in all parts of the country will be giving their fall exhibitions, and there will be the usual amount of competition among the dealers in the arrangement of cut flower designs. To be a judge of these is a very trying and thankless position. I have never heard the honesty of the judges questioned, but have frequently heard of, and seen many cases, where they have undoubtedly erred in judgment. It is a fact that "Men may may be honest though they differ." But if we can strike upon some plan which will prevent such a constant and great difference of opinion it will be an advantage to us all. A florist who has had years of experience, and spends a good deal of thought, time and money on a design, sends it to an exhibition, and thinks a great injustice has been done him if he does not get the anticipated prize.

Several times when there has been great rivalry and considerable hard feeling, I have been asked to act as one of the judges, but have always declined, because I realized the difficulties we had to contend with. There being no fixed standard of taste, one gentleman would be influenced by the size of the design, another by the brilliant coloring, possibly without regard to harmony. Another would take the quality of flowers into consideration—this is often the case with practical grow-

In selecting a judge of floral designs it is not always safe to infer that because a gentleman is a good judge of plants he will do equally well with designs. He may know that the plant is true to name and color, free from disease, well grown, etc., but he has lived such a wholly practical life, giving all of his time to the growing of plants, that he has not cultivated his taste for the beautiful or devoted much thought to the artistic side of our business. This is by no means always the case, as there are a great many growers that could teach the dealer how to arrange flowers.

In any case it is important to select gentlemen of refined taste and those that can decide between the work of a carpenter and an artist. To avoid these mistakes let us decide upon the best points to be considered; for instance, the harmonious arrangement of colors; the graceful arrangement of flowers; the quality of flowers; the general effect of the design, and, possibly, the practicability of the same; that is, how far would it be useful in our business. This point, I think, would generally be entitled to ten, but when we find a florist who attempts to perpetrate a monstrosity on a confiding public and expect them to look upon it as a work of art, the judges instead of allowing him ten points, which should be the standard for all, they would allow say two or possibly zero. If the judges see anything in the arrangement of color that they think could be improved upon, allow eight, six or whatever they may think just. Often the general effect will be good, but on critical examination the quality is hardly up to the mark and vice versa; mark the different points accordingly. In this way not only the florist will have something to work for, but the judges will have the same advantages in deciding on the merits of the designs.

The exhibitors should always be assigned a number, and this number strictly adhered to. There should not be more than one gentleman in the room with the judges, he to be there simply to give any information that they may require, but in no way to advise as to merits.

A good plan would be for the society offering prizes to have slips printed in form similar to the following, each judge to have one for each class, and finally strike an average which will show the winner:

THE AUTUMNAL EXHIBITION OF THE PENNSYLVANIA HORTICULTURAL SOCIETY.

PHILADELPHIA, Sept. 15, 1888.

In examining the entries for Class, Original Design, I deem the exhibits made worthy of the following points:

	Possible Points	Exhibitor No. 1.	Exhibitor No. 5.	Exhibitor No. 7.	Exhibitor No. 11.	Exhibitor No. 19.	Exhibitor No. 22.	Exhibitor No. —
Color	10	8	5	5	5	2	2	—
Gen. Effect	10	8	5	5	5	2	2	—
Grace	10	10	5	5	5	5	5	—
Practicability	10	10	5	10	10	10	3	—
Qual. Flowers	10	5	6	6	8	4	6	—
Total	50	41	37	38	34	32	35	—

Remarks:—No. 1 deserves credit for handling such ordinary flowers in a masterly way.

Signed, GEORGE M. BLANK, Judge.

Blank forms could be printed, which would do for any society or any season by filling in such spaces with pen and ink. The subject, I feel, should have the attention of all horticultural societies, and, if some plan can be adopted, it will be a great satisfaction to all concerned.

Philadelphia.

H. H. BATTLES

New York Notes.

BY WM. FALCONER.

GOOD NEWS FOR PHILADELPHIA—At New Rochelle, on August 23d last, the spirit descended on Dan.

"SERMONS IN STONES"—As did St. John in the wilderness, so cried out the very rocks by the wayside to Rose Hill. But it was known that the florists would pass that way.

SHADING—Siebrecht & Wadley use benzine and whitening for shading their greenhouses. "Yes, kerosene will do as well but benzine is cheaper."

SAGO PALMS (*Cycas revoluta*) FOR CEMETERIES—"There is a growing demand for Sago palms for cemetery work. When their pots are plunged in the ground it doesn't matter if they don't get water for a few days at a time. Then in fall the owners can lift them, tie up their leaves, pay \$5 a pair to a neighboring florist for wintering them and they will be all right again for use next year."

DECUMARIA BARBARA mentioned by Mrs. Thompson, page 5, isn't very hardy at Boston; it lives well with us here on Long Island and flourishes in New Jersey, but to see it in its glory we have got to go south.

"THERE IS A GENERAL house-cleaning going on now at all the establishments near New York," writes Miss Taplin, page 5. That's true, if the way in which I scrubbed and sweated and tore around is any indication of how other folks did. But then, how did those palms upon the stage in convention hall escape?

WE CANNOT PROPERLY say *Cattleya Rochelliana* alba, because no recognized species is named *Rochelliana*. If the new white flowered *gigas* has been named *Rochelliana* we must say *C. g. Rochelliana*. And we cannot call it *Rochelliana* alba unless the *Rochelliana* is some already fixed, recognized variety and this new white variety is a distinct form of that *Rochelliana*. As the case stands just now the name given to this new *Cattleya* is *C. gigas Rochelliana*, and this only. But even now I am not sure that the name is settled.

Seasonable Notes.

No time should be lost in getting violets into their winter quarters, whether in the greenhouse or in cold frames. In the latter case it is particularly important that they should have ample time to get established before the sash are put on for the winter. When removing from their summer quarters, all runners and weak crowns should be cut away but the plants ought never to be divided at this season. One effect of the violet disease will probably be to reduce the number of growers. We don't claim to be any smarter than the rest of mankind, but we are very much inclined to believe, that a good deal of this violet disease is the result of propagating from plants forced during winter. We are strengthened in this opinion by our experience, for since exercising a little care as to the stock used for propagating purposes our violets have been perfectly healthy. A sufficient number of good plants are selected in the fall, kept in a healthy growing condition, and from them the necessary stock for the following season is propagated in January. The young plants are carried over in boxes or 3 inch pots until planted out the following April, and with proper cultivation, they are fine plants in fall. I have followed above method for the past three years and shall keep to it until I

learn of a better. I know at least one Baltimore brother who will disagree with what I have said, because he propagates from cold frame plants, and all the same, has violet disease "in lots to suit customers." I have certainly seen very sick plants, the offspring of stock grown in cold frames and never subjected to the least forcing; but it does not follow as a matter of course that such stock was healthy, for a very little lack of proper attention will suffice to make any plant, in cold frames or elsewhere unhealthy.

It is always well to take "time by the forelock," therefore let fall work be pushed ahead with all possible expedition. If there is any glazing, painting, or other repairs yet to do, let them be attended to at once. See that boilers and furnaces are all ready to fire up in case of cold nights, which we may now reasonably expect. Callas, carnations, bouvardias, poinsettias, etc., still out doors, should be housed as soon as possible. Callas grown during summer in the open ground will have made a strong growth; cut away a little of the rankest foliage, and crowd the plants into as small pots as possible in order to hasten and increase the bloom. Poinsettias, if to be grown on benches, should properly have been in by the first of the month;

HOLLOW BRICK WALL.

plant them pretty closely and keep the shoots tied down. A corner planted with rose geraniums will give a supply of foliage that comes in very nicely through the winter, and by no means neglect to store an abundant supply of potting soil in some convenient place where it will be protected from the weather.

Baltimore.

A. W. M.

Hollow Brick Wall.

We give herewith a sketch of a hollow brick wall as used at the greenhouses of the Dingee & Conard Co., West Grove, Pa. Their superintendent, Mr. Antoine Wintzer, states that walls of this construction have stood on their place for nearly twenty years in good condition. The sketch shows plainly how the wall is constructed. The great advantage of a hollow wall is admitted and it would seem that such a simple manner of construction as that illustrated should commend itself. To make doubly sure it would be well to give such a wall an extra strong foundation and sink it well into the ground to prevent heaving by frost in any latitude north of that of Philadelphia.

Growing Pansies.

Pansies are grown here in large quantities for the seed and to furnish plants for spring sales. From my own observation I am satisfied that there were more pansy plants sold in this city than all other varieties of flowers combined.

In raising plants in large quantities the seed is sown from July 15 to Aug. 20

in beds covered with boards, with a thorough watering once a day. Great care is taken that the boards are removed as soon as the seed commences to sprout through the ground, which is usually from seven to eight days—three or four days quicker than by any other process. If the weather is very dry the bed is shaded from the sun with lath raised from the ground and three or four inches apart. When large enough the plants are transplanted to the field, and are wintered without any covering, great care being taken that the ground is well drained, as it is sure death to the plants if the water settles on them. In this way large quantities are raised with perfect success where the thermometer goes as low at times as 15° and 20° below zero. Plants raised in this way are more stocky and give better satisfaction to the purchaser than when grown in greenhouses or cold frames.

The varieties mostly used are the German from the great pansy specialist, Luneburg, who sends out fifty-four distinct varieties. These pansies are able to withstand our winters without covering, and have the most beautiful colors, combined with substance and shape, of any pansies in the world with the exception of the Bugnots. The latter is the finest of all when well grown, but is hard to germinate, and has to be wintered in a cold frame. The Trimardeau is perfectly hardy and finds a demand among those who regard size and do not care for color, substance or shape.

It is a beautiful sight to see a large field of pansies in bloom, and interesting to examine the trial grounds of the seed of different seedsmen.

CHARLES L. BURR.

Springfield, Mass.

New Chrysanthemum Elk's Horn.

This new chrysanthemum is so named on account of its peculiarly shaped florets. It is pearly white in color, full and globular in form, quite distinct and extra fine.

Steam Heating.

In your issue of July 1, Mr. A. B. Ellsworth, of Allentown, Pa., writes for a few points on steam heating, which as yet have not been answered in any of your subsequent editions, so I send this account of what has been my experience regarding the subject in question. Some two years ago I started to build at Lansdowne a couple of greenhouses; the size of each being 120x17 feet with shed in addition, the latter being 50x12 feet and although strongly advised to the contrary I decided to try heating by steam in preference to any other method. I have found it to be satisfactory thus far, and would not now make a change under any circumstances.

In placing the boiler it is very important that you should put it as far below the surface as possible, say from six to ten feet, although unfortunately I was unable to get lower than four feet on account of water, yet, notwithstanding this drawback in my case, I have found it to work very well when I used but a low pressure. Now as to the particular kind of boiler. This is a point which is open to discussion, but from observations which I have made from time to time I would say that if one has but a small place (three or four houses not more than 120x20 feet) a locomotive boiler is the best, as it is by far the cheapest, in the first place, and secondly it is the most

NEW CHRYSANTHEMUM, ELK'S HORN.

economical as regards fuel, while if a return tubular boiler is used it often costs more to brick it in than the original price of the boiler, and thus creates an item of expense which must necessarily be a question of importance to one who is just starting in business in a small way with the intention of following same to make a livelihood.

The locomotive boiler which I use is

about 20-horse power, as near as I can judge, with a fire-box 3x3 feet. The flow pipe is taken from the highest point directly over the boiler, and is two and a half inches in diameter, being connected with four pipes, each one and a fourth inch, which run around the house and on each one of these pipes there is a valve, making it a matter of convenience to use either one, two, three or the whole four pipes according to the weather. The pipes have a gradual fall from the boiler. My business is specially that of forcing cut flowers for the Philadelphia market and (the houses are three-quarter span with a high back bench) consequently the houses have to be kept up to a pretty high temperature, and during the coldest weather I have maintained 58° without much trouble, thus proving that in my case at any rate steam heat is by far the best. I think that if a person has only two or three houses and puts in steam he will never regret it.

The cost of my whole apparatus was not more than two-thirds of what it would have been had I put in hot water. I would never advise a florist to use a cast iron boiler for steam as it is much more liable to crack than one of wrought iron.

Mr. A. L. Pennock, of this place, has met with two accidents with his cast

iron boiler this last winter. The first time through one of the pipes in the greenhouse having a bend, the pipe burst and consequently the water backed out of the boiler. When the night fireman saw the water low, he at once ran more in and a split in the boiler soon followed. Fortunately Mr. Pennock's boiler is composed of sections, and he has it so arranged with valves that he can run a part or the whole at the same time. If Mr. Ellsworth could make it convenient to call on me I would take pleasure in showing and explaining our method of laying the pipes.

W. W. COLES.

Lausdowne, Pa.

Steam Heating.

In reply to Mr. Kellogg, of Pleasant Hill, Mo., I would say that he asks an exceedingly difficult question. Every man has his own idea as to which boiler is the best. We are all so liable to think that the article we use must be superior because our own wise discernment has discovered its excellent qualities. To ascertain which of the many boilers in the market is the best, there must be comparison of results. These can only be determined by experience, and this experience purchased, as many of us

know, at considerable cost. I have had several years practice with steam, and after having used several boilers we have come to the conclusion that the Ferguson boiler, advertised in this paper, is the most economical as to both fuel and labor that we have yet tried. I could state many points why this is believed to be the case, but the trouble is, that in so doing, some will at once think that there is money in it for me in advertising it.

The best thing for Mr. Kellogg to do is to communicate with all the makers of boilers advertised in the *FLORIST* and those with whom he makes the contract will be best able to advise him as to the size and quantity of pipe to be used. It is a great mistake for any florist to look only at the first cost of his heating apparatus. From the erroneous idea of economy no end of mistakes are made both in the buying of too small a boiler and in the arrangement of the pipes for the circulation of either hot water or steam.

Do not be gulled by specious promises, nor let any man persuade you into putting in a so-called cheap job, for in the end it will prove a dear one. By having an efficient boiler and proper circulation, many tons of coal can be saved. Everything that causes friction should be avoided, for with this fault an increased consumption of fuel can certainly be looked for, and it is in such essentials that an expert's advice is of inestimable advantage.

ALFRED F. WHITTLE.
Albany, N. Y.

Overhead Heating.

HAS ANY FLORIST, who has actually experimented with overhead heating noticed an increase of red spider in houses heated in that way, which may be attributed to that cause?

E.

IT IS ABSURD for stripling florists to assert that overhead heating increases red spider. Prove it!

JAKE.

IS THE POPULARITY of *Myrsiphyllum asparagoides* (smilax) really on the wane? What can be grown that will likely be profitable to take its place?

L.

Daily Record of Work Done at the Lincoln Park Greenhouses, Chicago, 1887.

Sept. 16—Tem. morning 57°, noon 61°, evening 57°. Wind NE. Commenced propagating geraniums, taking cuttings from bedded plants. Put heating pipes in working order and filled with water.

17—Tem. 58, 68, 65. SE. to NE. Made cuttings from geraniums Clifton and Gloire de Carbonay. Mended leaks in heating pipes.

18—Tem. 49, 72, 63. E. Sunday.

19—Tem. 55, 72, 65. E. Made cuttings from geraniums Clement Boutard and Queen of the West. Continued cleaning glass on houses.

20—Tem. 62, 74, 69. E. Put in cuttings of geraniums Queen of the West, Rev. A. Atkinson, Ralph and Dr. Jacoby. Removed gloxinias and dracenas from frames to houses. Carried sand in houses and prepared additional benches for propagating.

21—Tem. 72, 86, 70. WSW. to NE. Put in propagating bench cuttings of geraniums Guillaume Mangelle and Emilie de Girardin. Removed coleus and Alter. par. major from frames to houses. Cleaned up frame yard emptying all pots containing superfluous plants and stored pots.

22—Tem. 58, 64, 61. NE. Put in cuttings of geraniums Ernest Lanth, Pres.

Leon Simon and Sapeur Pompier. Removed Alter. par. major, poinsettias, abutilons, tuberoses, linums and cytises from frame yard to houses.

23—Tem. 45, 54, 51. NW. to NE. Had fire in some of the boilers over night. First firing of the season. Put in cuttings of geraniums Wonderful and Mme. Thibaut, also heliotropes, trapæolums and pilogynes. Removed from frame yard to houses plants of *Alternanthera versicolor*, *amoena* and *aurea*, intended for stock. Took inside rubber and coffee trees, also azaleas and chrysanthemums.

24—Tem. 44, 60, 56. S. to SE. Put in cuttings of gnaphaliums and bronze geranium Earl Roslyn. Prepared additional benches for propagating.

25—Tem. 54, 64, 61. SE. to E. Sunday.

26—Tem. 57, 59, 54. SE. Put in cuttings of geraniums Mme. Salleroi and Mme. Phitzer. Removed shading rolls from back part of conservatory. Continued replacing broken glass and otherwise preparing for winter.

27—Tem. 57, 57, 55. E. to NE. Put in cuttings of maurandias, cupheas, lophospermums, double alyssums, German ivies, nierenbergias, lobelias and rose geraniums. Cleaned and tied chrysanthemums. Moved tuberous begonias from No. 1 to No. 3.

28—Tem. 57, 62, 56. SE. to NE. Commenced potting abutilons which had been planted outside during summer and took inside. Cleaned up No. 4. Continued repairs.

29—Tem. 60, 69, 65. S. to SE. Last trimming of foliage beds. Wheeled tanbark from frames. Prepared empty benches for pot plants and cleaned under the benches in houses. Arranged plants in No. 1.

30—Tem. 59, 60, 59. SW. to SE. Same as yesterday and picked celosia seed. Continued preparations for winter.

Burning Natural Gas in Flues.

I wish to know whether I can burn natural gas instead of wood in my brick flues to advantage? My house is 75x20 with flue running all around the house and chimney built on top of the furnace. I am anxious to use the gas but have not heard that anyone has used gas in flues and thought had best enquire and learn the experience of any who may have used it that way. Is any change in the furnace necessary in order to use gas?

Toledo, O. SUBSCRIBER

SIoux CITY, IOWA—W. E. Jones, of the Sioux City Seed & Nursery Co., died August 25.

September Floral Styles.

Fall designs for decoration are very bold, and they are, of course made up with bright material; for more and more are wild flowers utilized during their season, particularly for room decoration. The desire for field flowers in winter time has been nearly a rage for several years. Clover, daisies, and buttercups at midwinter, are the most fascinating novelties, and if had in any quantity, would pay roundly. The shrub bloom brought in last winter was received very cordially, and now in summer and autumn, seasonable blossoms and foliage is demanded for all decorations that are on a large scale.

Pale tints no longer predominate; this will be a season of rich coloring in floral make up, and the florist will have more scope, certainly, when not confined to a trio of colors. A new wedding arrangement that is extremely novel and æsthetic will be introduced in October in time for the grandest fall nuptial decorations. It is called "The Merry Thought." A picture of this will soon appear. For the present, a very rich arrangement is made with golden rod, and one which will remain popular as long as this elegant flower that now gilds meadow and suburban waysides, can be obtained. The semi-curtains, generally known as French curtains, screen the windows. These are made by stalks of golden rods, which are so placed and trimmed, that the top blossoms form the gilt rod in appearance. A line of the bloom is spread across at the base on a wire, to simulate the lower rod. The head of the room, arch, or bay window, where the ceremony is to take place, is decorated more splendidly than customary. First a crescent of lacy greenery is formed by tall plants, and just in front of that the same curving line is carried out by a lattice or irregular fence made of wire or reeds, (the latter being firmly held together at the back by wire), and covered with the golden bloom. If the reed fence or screen is made, the top can be picketted, or finished in any irregular way that will show well against the foliage background. The new styles of vase baskets formed of raffia, are filled with golden rod and placed in fire places, and also on mantels and cabinets.

Bouquets grow less round, and very much longer from the end of the stems to the end of the center flowers, which are still fringing. This style grows in favor, and as a new shape in bouquets was very much in request, it will probably rule through the winter. The choicest arrangement for a wedding bunch at present is a center of lily of the valley without foliage; so that the sprays fall loosely. The surrounding flowers are odontoglossums, and there is a wide, deep fringing of Farleyense fern fronds.

The style for the reception bouquet and favor cluster is not yet defined. It will either be a small loose bunch such as is now carried at Newport, and is made of single pink hollyhocks, roses being substituted for the blossoms so singularly brought into prominence, or it will be a novel arrangement of Eucharis amazonica of long stems, which Mr. Klunder is likely to introduce. Florists of rustic ideas and modest endowments in their ability to make up will make a hard battle to still foist the big close circle of roses, with foil covered stems on the public, but people of taste are tired of being weighted down, and would prefer quality or artistic make up.

Wedding bonnets, worn at noon weddings by bridesmaids are charmingly trimmed with the natural flowers. Six were made lately by a milliner, who called upon a neighboring florist for the blossoms and some assistance. White, pink, and blue tulle covered the small frames. The flowers were placed around and right up the crown to meet a large front cluster.

The season of dinners has not yet opened. The latest affair at Newport was a mixed arrangement of flowers and vines. Wild honeysuckle was laid in graceful curves over the board. Bubble glasses (introduced last spring), stood here and there, being filled with selected American Beauty roses. The favors were small bunches of pink hollyhocks and adiantums.

FANNIE A. BENSON.

New York.

New York.

Russian violets are coming in from College Point and are in good demand for the boxes of cut flowers ordered from fall watering places, such as Lenox and vicinity.

Business begins to stir perceptibly in floral stores. There is a good list of orders for wedding decorations and dinners.

Bird of New Jersey intends astonishing the trade with his array of forced hardy shrubs the coming season.

The gifted widow of the late James Reid, who is the only daughter of Peter Henderson, Esq., is engaged to marry a gentleman preminent in Philadelphia circles and associated in business with the Heckers.

"You may break, you may ruin the vase if you will, But the scent of the roses lingers there still."

Field mushrooms have been so scarce in this vicinity for the past two seasons, that unusual exertions are made to bring in early crops from hothouses. Some are already in market selling for one dollar a pound.

Wm. Smith, superintendent of the Botanical Gardens at Washington, gives the credit of the passage of

the bill reducing the rates of postage on seeds and plants to his famous collie, named after the donor, Peter Henderson. It seems that when Peter Henderson Esq., appeared before the sub-committee in Washington to make a speech in favor of the bill, he was somewhat frustrated, as speech-making is out of his line. A member of the committee arose and inquired of Mr. Henderson if he was acquainted with Peter Henderson of the Botanical Gardens. Mr. Henderson assured him that he was, when there was a hearty laugh all around. Mr. Henderson became jolly, and made a telling address, and the bill passed.

I heard a well posted gentleman say that no paper had been so thoroughly read and so popular among the florists, who are not great readers, (as it has probably occurred to many) as the AMERICAN FLORIST. Even the small boy in the greenhouse, the printer's devils' of these establishments, look eagerly for each number.

F. A. B.

Chicago.

The West Park Commissioners will build conservatories in Douglas Park costing \$20,000.

Mr. Sidney Clack, for several years superintendent of the McCormick rose houses at Lake Forest, has removed to Redwood City, California, where he has charge of the rose houses of N. J. Britton, and will grow roses for the San Francisco market.

The father of Henry Hansen, the Rose Hill florist was probably fatally injured by having his wagon run into by a north side grip car on the 4th inst., while bringing his son's flowers down town. The wagon was turned completely over with Mr. Hansen under it. He sustained severe internal injuries as well as external bruises. At last report there was some hope of his recovery.

THE TUBEROUS BEGONIA ITS HISTORY AND CULTIVATION is the title of an admirable little book published by the *Gardening World*, 17 Catharine street, Covent Garden, London, England. The history of this plant, which has made such great strides within a few years is very interesting, and the cultural directions covering all methods of growing are very complete. As the tuberous begonia is undoubtedly destined to take a prominent place among florists' flowers this little work is very acceptable at this time.

J. A. PENMAN alias "Jim the Penman, the florist's friend," will discontinue his raids upon American florists for a short time. He sailed for England on the City of Rome, on the 5th inst., in company with F. L. Temple of Somerville, Mass.

Berlin Flower Basket.

I noticed an odd but showy basket in Berlin. It was an oval, deep plateau, two and a-half feet long with a handle one foot high, square at the corners. The body of the basket was of yellow, in marigolds, chrysanthemums and nasturtiums. A bunch of Jacq. roses was fastened on the side and a band of pink balsams covered the outer surface of the handle. For a yellow basket it was good.

OIL CITY, PA.—O. H. Strong & Co. have just completed three rose houses 300x12 and are preparing to build two more of same size—70,000 feet of glass in all—also a new cold storage basement 56x62 for plants and an ice reservoir 120x30. N. A. Ingham has built two small houses 30x11 each.

NEW DWARF WHITE DAHLIAS, SAGO PALMS, ETC.

Dahlia Camelliaiflora alba, full of buds, in 5-in. pots, \$3 per doz., \$20 per 100; 4-in. pots, \$2.50 per doz., \$15 per 100. **Sago Palms**, finest stock in the West; 1 to 2 leaves, \$5 per doz.; 2 to 3 leaves, \$12 per doz.; 3 to 5 leaves, \$24 per doz.; extra large plants from \$3 to \$10 each. **Yucca Aloefolia Var. and Pandanus Veitchii**, fine plants, 4-in. pots, \$6 per doz. Also a few hundred very fine **Roses for Winter Blooming**, 4-inch pots at \$12 per 100. **Brides, Niphetos, American Beauty and Perles**. Address

JOHN G. HEINL, Terre Haute Ind.

Hughes' Soluble Fir Tree Oil.

FLORISTS AND NURSERYMEN SHOULD NOT BE WITHOUT IT.

Unsurpassed as an insecticide, in kills effectually all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants—such as ferns, etc., if used as directed. Used as a WASH it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

Dog fanciers should not be without it! It makes a silky Coat and produces healthy Skin Action; kills fleas, and is excellent for washing dogs.

Housewives should not be without it! Used with ordinary household soap it is an effectual disinfectant, BLEACHER AND CLEANER OF FABRICS. It kills insect life on man, animal, or plant, without injury to the skin, wherever parasites may appear.

Put up in 1 gallon tins, \$3.25; Full directions & trade Put up in 1 quart tins, \$1.00; mark on each package.

BARBED GLAZIER POINTS

WITH OR WITHOUT LIPS.

Pat. 10 April and May, 1888.

No more CLIMBING OVER the glass.

NEW MODE OF SETTING,

Commencing at the top instead of the bottom.

These points hold better than all others. No. 1 will hold glass 4x15, and No. 2 will hold glass 15x24, not allowing it to slide 1/8-inch in five years.

Glass fastened with them, and the methods of using these points, will be fully shown at the coming

Second Edition.

GEO. A. SOLLY & SON'S
BOOK OF PLANS

For

Carpet and Ornamental Flower Beds.

With many it is a difficult task to lay out a carpet bed, or fancy design on the lawn, and perhaps more difficult to choose the proper plants to harmonize, so as to give the best effects. The object of these drawings is to assist gardeners and amateurs, and to enable them to choose the proper plants for their work. It is expected that this book will supply a long felt want, as it is the first and only publication entirely devoted to Fancy Flower Bed Designs.

This, our SECOND EDITION, consists of over 100 designs, finely engraved, on good paper, nicely bound, sent pre-paid to any address on receipt of Price, \$3. GEO. A. SOLLY & SON,
SPRINGFIELD, MASS.

That Ball Game.

I wish to correct an error in the last issue of the FLORIST. It is stated that the ball game at Iona Island was won by New York. Now there were *five* players from Philadelphia in the nine, and Philadelphia originated the game, and we Philadelphians believe that at least one half of the credit is due us. Please correct and save the flow of gore. PHILIE.

The National Flower.

While a party from the New York convention were on their way to Queens, Saturday, the train passed a field containing wild carrots and golden rod and the following conversation was overheard:

She—There seems to be an abundance of the national flower here.

He—Yes, why, I never saw carrots so plentiful before.

She—(Contemptuously). Carrots! Why, it would take eighteen karats to equal even the color of our national flower.

"CUT RATE" FLOWERS.—The Cincinnati Floral Co. relates that a young man called at their store lately and stated that a young lady had requested him to get to cents worth of "cut rate" flowers. They had experienced several demands for to cents worth of smilax or M. Niel roses, but feel that a demand for "cut-rate" flowers breaks the record.

GERMAN BULBS

FOR FLORISTS' TRADE.

We have large quantities of HYACINTHS, TULIPS, DAFFOD'LS, and all the leading bulbs, for forcing, grown for us on contract in HOLLAND, GERMANY and FRANCE. GET A BETTER CATALOGUE FOR '89

Than you had for '88, if possible. Have it clean, correct, and pretty with pictures; tell the truth in it about your goods. You can command the best facilities for doing all this by corresponding with the undersigned, the "florist printer," who is thoroughly ready to make better work than ever, and more of it. Write him NOW—he don't expect to be able to serve all who want him to this season. He is

J. HORACE McFARLAND, Harrisburg, Pa.

Chesnuts.

Look out for frost.
Is your winter supply of fuel in?
Are your boilers and heating pipes
ready for instant use.

Have you a good supply of sand and
potting soil under cover?

Take cuttings of all soft stuff now from
bedded plants.

Label all stock plants and see that the
plant is what the label calls for.

All plants from which you desire early
flowers should now be under cover.

If broken lights of glass are not all
replaced attend to it at once.

Be ready to fire as quick as cool nights
come. Don't wait for frost.

Don't let your work get ahead of you
now. Don't permit any delays at this
season, when delays are especially dan-
gerous.

Prepare to take an inventory of your
stock as soon as things are safely under
cover.

If you do not already keep a diary of
work done, start one now. You will find
it of incalculable value next season.

Get a blank book and keep accurate
record of all expenses for coming season.
Ascertain what your plants cost you to
grow, and, when the price drops below
cost, you know what to do. Let the
other fellow grow that stock and buy from
him, if necessary.

HILL & CO.,
Novelties and Plants

— OF —

INTEREST TO EVERY FLORIST.

Many never Before Offered either in
Europe or this Country.

Abutilon Caprice—Handsomely formed, bright
purplish red flowers with a rich tuster, free bloom-
ing. Foliage marbled and blotched cream and
golden yellow. Price 30 cents each; \$3 per dozen.

The New Orange Oleander N. Lenteum—A decided
novelty both in color and freedom of bloom. Price
50 cents each; \$5 per doz.

Plumbago Capensis Alba—The exact counterpart
of Plumbago Capensis, with cream white flowers.
This will be one of the leading new plants of the
year. Do not confound this variety with the old
worthless white variety. Electro of this by Blanc.
Price per plant 25 cents; \$20 per 100.

New Begonia Argenteo Gullata—A cross between
B. Olbia and B. Alba Picta. A handsome habited
plant with rich green leaves, spotted with silver. A
remarkable Begonia. Price 75 cents each; \$8 per doz.

Wood cut of this fine novelty by Miss Stigleman.
New Begonia Sceptrum—Another wonderful Be-
gonia from Brazil. A distinct and beautiful species.
Leaves deeply lobed, veins sunk, raised places be-
tween, marked with large silvery blotches. Price
75 cents each; \$8 per doz.

New Begonia Mirabunda—A cross between B.
diadema and the Rex family. This is one of the
finest ornamental leaved varieties ever introduced.
A good strong growing vigorous variety. Must be
seen to be appreciated. Price 60 cents each; \$6 per
dozen.

Electros of this variety by Miss Stigleman.
New Begonia Lucy Closson—A seedling from
Louis Chretien raised by M. Jacob Makoy of Ghent.
This is one of the sterling novelties of the year and
is a grand improvement on Louis Chretien. Rich in
color and of a deep metallic hue. Price \$1 each.

Begonia Countess Louis-Erudy—This is one of
the most beautiful of the Begonia family, and is
destined to have an immense sale. For description
see cut. It is one of the most curious and interest-
ing plants grown. Of Rex parentage and growth
yet so distinct as scarcely to resemble the Rex.
We have prepared an immense stock of this mag-
nificent variety. Price 25 cents; \$20 per 100.
We have a number of other new Begonias which
will be found described and priced in our wholesale
list, which will be mailed on application. We will
however, mention M. Lionnet's crosses between B.
Snipeltaia and the Rex type, viz.: M. Lionnet, M.
Hardy, Noemie Mallet, President de Bonneville.
These elegant Begonias secure special premiums
at the Ghent show as being the finest ornamental
leaved [new] plants of this year.

We have among Rex, Bruant's new variety Lies-
ondslil. Price 50 cents each.

Rex varieties—Scarce and new Mad. Luizet, Perle
de Poitiers, Prof. Heide, President Devanny, Perle
de Paris, Madam Malaten, Walter Reid, Vol lactea,
Ed. Kennedy, Lierich, Ed. Andre and Paul Payonnet.
Price \$1.20 per doz.; \$8 per 100; \$75.00 per 1000.

Rex varieties—Old but choice—Queen Victoria,
Rex Duchess Brabant, Golconde, Grandis Rex
Magnifica, Mad. Alwardt, Quadricolor, Lord Pal-
merston, Killing Sohn, Silver Fleecce, Queen Vic-
over and Abel Carrier. Price \$5 per 100; \$45 per 1000.

Begonia Sem. Gig. Rosea. Fine for winter.
\$1 00 per doz. \$8 00 per 100

" " Elegans 3 00 " 20 00 "
" " Amelia 1 50 " 10 00 "

Novelties in Geraniums for 1888. The finest and
best of the new single and double varieties of the
year from Europe. Send for description and price.

We have to offer the finest new Geraniums of
1887 and some of them are exceptionally fine.

Geranium Bruantii—The most remarkable Ge-
ranium of the day. Quite distinct from Heteranthus
or double Gen. Grant, as it was called by some.
There is no finer Geranium grown than Bruantii.
Price \$1 per doz; \$8 per 100.

A selection of finest named varieties, both double
and single, for \$8 in 50 varieties all named.

Novelties in Roses for the current year—We have
all the new Roses and have flowered and tested
upward of 60 varieties—introductions of this year.

The following show good points and are worthy of
trial. Mad. Hoste, Tea; Gloire des Polyanthus,
Poly; Madam Georges Bruant, Rugosa, Tea;
Princess Sagan, Tea. Countess Anna Thun, Tea,
Dr. Pasteur, H. Ten; Madam Andre Duron, H. ten;
Madam Georges Pernet, Polyantha.

All the fine novelties in Roses of last year now
ready at \$20 per 100.

Primrose Dame, Folkestone, Pierre Guillot, An-
toin Verdier and other choice Roses in great quan-
tity at low prices.

Forcing Roses—Perle, Sunset, Niphotos, Mermel
in various sizes.

New Chrysanthemums—novelties of last year both
English, French and American.

New Chrysanthemums for 1888—These have been
imported without regard to cost, and we shall offer
the finest collection of new Chrysanthemums in
the country.

We want you to send for our fall descriptive list
which will be ready by September 15.

SUPPLEMENT TO

THE AMERICAN FLORIST

NURSERYMEN'S DEPARTMENT.

Vol. IV.

CHICAGO AND NEW YORK, SEPTEMBER 15, 1888.

Supplement to No. 75

THE AMERICAN FLORIST

Copyright, 1888, by American Florist Company
Entered as Second-class Mail matter.

Published on the 1st and 15th of each month by

THE AMERICAN FLORIST COMPANY.

GENERAL OFFICES, 54 La Salle Street, Chicago.

EASTERN OFFICE,

Room 15, Vanderbilt Building, New York.

All communications should be addressed to the
general office at Chicago.

THE AMERICAN ASSOCIATION OF NURSERYMEN.

GEORGE A. SWEET, Danville, N. Y., president;
G. J. CARPENTER, Fairbury, Neb., first vice-pres-
ident; CHARLES A. GREEN, Rochester, N. Y., sec-
retary; A. R. WHITNEY, Franklin Grove, Ill.,
treasurer. The next annual meeting at Chicago
the first week in June, 1889.

THE PRINTED REPORT of the proceed-
ings of the thirteenth annual meeting of
the American Association of Nurserymen,
held at Detroit June last, is received. It
is a neat volume of 91 pages, well printed
on excellent paper and contains the
many valuable essays read at the recent
convention with the discussions on the
same and other business. It is orna-
mented with the portraits of a number of
prominent horticulturists. The report
can be secured by remitting the member-
ship fee of \$2 to Secretary Chas. A. Green,
Rochester, N. Y.

OBITUARY.

D. WILMOT SCOTT, for many years
secretary of the American Association of
Nurserymen, died at his residence in
Galena, Ill., August 28, of paralysis,
aged 60 years.

Mr. Scott was born in Chenaug county,
New York, and remained there until of
full age, when he came west and settled
in Wisconsin, near Geneva Lake. After
a year or two he went to Janesville, Wis.,
where he engaged in business for several
years and in 1852 removed to Galena,
where he has since resided up to the
time of his death. In partnership with
Dr. Roy he published the *Evening Jeff-
ersonian* for some years. In December,
1885, he was appointed by President
Cleveland, postmaster at Galena, and
filled that office up to the time of his
death.

Mr. Scott was well known to nursery-
men from his long incumbency of the
office of secretary of their association,
which dated from the birth of the society,
fourteen years ago, up to last year. He
was a man of ability and untiring energy,
always projecting new schemes of busi-
ness in addition to those in which he
was engaged. He was a good practical
printer, and was connected with news-
papers most of his life. The *Press* was
his latest venture, and he did much hard

D. WILMOT SCOTT

work in establishing it. His connection
with it ceased in November of last year
since which he has devoted his entire at-
tention to his office and the nursery busi-
ness, which was always his favorite
hobby. He was genial in disposition
and made friends easily and had many
bitter enemies. Had it been possible for
him to devote himself exclusively to a
single business he would unquestionably
have been successful.

Mr. Scott leaves a large family to

mourn his loss, and their sorrow will be
shared by a large number of his trade
associates, to whom the annual conven-
tion will seem indeed strange without
the familiar face of their old friend. The
funeral occurred August 30, at 3 o'clock.

The Seventeen Year Locust.

I want to know whether to believe this
story or not. Will some one in the busi-
ness either deny or indorse it? I do not

lack confidence in the party who told it to me as far as honesty is concerned, but he may have taken anothers say-so, and it may have been written up by that reliable editor who explained how to sow red cedar berries.

Last week, business took me into the country, and along the road side I noticed that the ends of most of the branches on oak trees were dead and hung straight down, as though broken and hanging by a thin piece of bark. In places other trees were affected, but it was seldom that the dead branches were noted on any but the oaks. A few of the residents explained that the damage was done by the "17-year old locust." They said: "The locusts come out of the ground in early spring and kick up a great clatter until the trees send out soft, young shoots, when they climb the trees and pierce the new growth about eight or ten inches from the end and deposit their eggs. In a few days or weeks the branch dies between the wound and the end, hangs down, finally drops to the ground and becomes covered up. In just seventeen years—to the minute, allowing for leap-years—these eggs are hatched and the trees catch it again."

I would like to ask Mr. Editor, if among your acquaintances there is one who has set on the fence for seventeen years to watch these things? C. B. W.

[We know of only two acquaintances who have been on the fence for any length of time. One is still there, but the other is not, for the top rail broke and he decided to at once set on the ground. But neither of these gentlemen were interested in insects.—Ed.]

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. If you want employment; if you want help; if you want to sell your business; if you want a partner, or if you want to buy a nursery, advertise under this head and you will get it. The cost is slight, try it.

Centennial Exposition,

CINCINNATI, OHIO.

Early Firing.

A rule with a very successful Boston grower is to begin firing by September 15, regardless of the weather. He maintains a little heat in the pipes at night even if ventilation has to be done to reduce the temperature. This applies to all plants requiring a temperature of 55° and above.

It is not the few degrees lower temperature on these nights that does the damage, but the cold, clammy, dead atmosphere which is to be noted in unheated greenhouses, especially from midnight till morning, at this season. A very little fire heat remedies this, starts the air into circulation, sweetens the atmosphere and avoids a set back which is sure to result otherwise. A ton of coal used judiciously at this season will pay a larger return on the investment than any other a grower can make, and it is remarkable that there are so many penny-wise and pound-foolish growers who do not seem to grasp the situation.

2000 SMILAX PLANTS

at \$1.00 per hundred.

ROSES at \$3.00 per 100, 3½-in. pots, consisting of Perles, Mermets, The Bride, Bon Silene, Niphetos, etc.

HIGH GRADE PANSIES

A SPECIALTY.

After a thorough trial of the most noted strains of Pansies in cultivation, we confidently recommend the following to the trade as a long way ahead of all others, for size or colors:

Our Improved Giant Trimardeau as the best for market.

And New French Fancies as Extra.

Trade Packages of either variety at \$1 each. Seed of our own growth.

We have proved these to be the highest quality of Pansies at the present day, and are the same as we exhibited in Boston in May last.

DENYS ZIRNGIEBEL,
Needham, Mass.

ROBT. J. HALLIDAY,
Baltimore City, Md.

A Potato as Big as a Cow.

Here is a story from the Albina (Oregon) Courier, beside which all accounts of big steers, pumpkins, etc., at county fairs pale into insignificance. The story appears under the head "A Big Spud," and reads as follows: "There is a big potato on exhibition down at the Continental hotel bar that is perhaps the most immense vegetable grown in this country or any other. It was raised by A. Lapelle, ten miles north of this city, and measures 11 feet in length, 3½ feet in diameter, and 9½ feet in circumference, and when weighed on a pair of hay scales was found to tip the beam at 838 pounds. When Mr. Lapelle was digging his potatoes last fall and came across this monster he thought at first he had struck the root of the giant yamabatus, a tree of the eucalyptus order now extinct. Further investigation, however, proved it to be a potato. It took three men and a spau of horses a day and a half to dig this potato out of the ground. It was then swung upon a big logging truck and brought to town. Though it may seem curious, this potato is as fine grained as its smaller brethren, and when sliced up and fried cannot be distinguished from an ordinary potato of good quality. The above figures may not be exact, as the editor lost his notes on the subject, and is compelled to rely on memory, but they are near enough for all practical purposes."

L. Wolff Mfg. Co., 93 to 111 W. Lake St. CHICAGO**SYRACUSE POTTERY CO.**

Ships Greenhouse Flower Pots to Maine, Florida, California and Texas—everywhere—in crates only, but with no charge for crates or cartage. New clay mill, two engines, new revolving moulds turn out finest, smoothest and most perfectly finished pots in the market. No more rough pots. Send for frt. rates and prices of 20 sizes (thumbs to 16-inch) packed to order. Our great cut in the prices of our 19 READY PACKED CRATES has given us an immense trade all over the South and West. No Pottery ships so far, so securely and so cheap as we do it. Our new patent machines finish pots finer than any hand-made pot, and we carry a big stock ready to ship the day the cash comes. No traveling men; no notes or accounts.

GREENHOUSE POTS

are our great specialty. We have three sizes of deep "Rose Pots" at \$3.75, \$4.00 and \$4.33 per 1000. We pack crates of mixed sizes to order. A crate usually weighs 400 lbs. and goes at buyer's risk and frt. We give samples in first crate. We ship on receipt of order and cash and without delay.

PRICES PER CRATE, CASH WITH ORDER:			
3,150 Thumbs,	\$8.00;	875 3¼-inch,	\$5.50;

"15 YEARS' EXPERIENCE. THE GURNEY SAVES 33 1/2 PER CENT IN FUEL."

Letter from Thomas Gray, of Fitchburg, Mass.,
In reference to

GURNEY HOT-WATER HEATER.

FITCHBURG, MASS., April 13, 1888.
Dear Sirs:—In answer to yours, asking my opinion of the Gurney Hot Water Heater which you sold me, would say that I have had fifteen years' experience in heating hot houses by water, and must say the Gurney Heater purchased of you has proved itself a wonder, both in power and economy, using one-third less fuel to get same results than any heater I have ever used. The brick-lined pot I consider a special feature, as it renders combustion equal throughout the entire pot.

Yours truly,
THOMAS GRAY, Florist.

Illustr. Catalogue & Testimonial Sheet Free.

THE FURMAN STEAM HEATER

ESPECIALLY ADAPTED FOR WARMING GREENHOUSES.

Gives a most uniform heat night and day. Can be run with less attention, and a SAVING of fully 20 to 25 Per Cent. in Fuel over any other method. Burns HARD or SOFT COAL. Endorsed by leading florists. Send for full illustrated Catalogue, showing how to pipe and heat a house by steam.

Address **HERENDEN MANUFACTURING CO., GENEVA, N.Y.**

"Perfect"

(Trade Mark)

Hot-
Water
Heater.

THE MOST POWERFUL HOT-WATER BOILER EVER CONSTRUCTED.

These Heaters contain more features for saving fuel and labor, and are better adapted for heating Conservatories, Greenhouses, Dwellings, Offices, Schools and Public Buildings than any other makes of Hot Water Heaters. By reason of their enormous heating capacity and increased square feet of boiler surface, and positive circulation, they are the only rapid circulating Hot-Water Heaters made. At a test made the 19th of January, 1888, at the works of the A. A. Griffing Iron Co., Jersey City, N. J., (manufacturers of the "BUNDY Radiators"—where all the leading makes of Hot-Water Heaters have been tested—more power was developed, with less fuel, than any heater ever tested there.

GOLDMAN'S ATOMIZER AND SPRINKLER

FOR A THOUSAND AND ONE USES.

COMMENT UNNECESSARY

Practical and Useful.

You will not part with it.

For Flowers, Window Gardening, House Plants, Destroying Insects, and for various fine sprays. Most natural substitute for fog or dew. By dipping to water while closed, fills instantly. Ball finely perforated; spray controlled by pressure of hand. Size of lemon squeezer. Weight, 5 oz. Exclusive Territory to Agents. Sells on its own merits; no talk. Sample by mail, 50 cts. This is the Atomizer that sold so well at the Danbury, Albany and other fairs. Florists and Seedsmen, show it to your customers; sell fast; good profit. Excellent for indoor plants. Send for illustrated pamphlet and price to the trade. Mention this paper.

CINCINNATI—The Oakley Rose Houses under new ownership and the old management are preparing to extend their business the coming season.

MINNEAPOLIS.—Trade is improving, as there have been several receptions lately at which flowers have been used profusely. All the local florists were busy during the recent flower show at the Exposition Aug. 28. Mendenhall of this city received 1st premium, Venske Bros. of St. Paul 2nd, C. A. Smith of this city 3rd, and Wessling & Wasaltry 4th. All the displays were excellent and many flowers were used.

GREENHOUSE HEATING AND VENTILATING.

Superior Hot Water Boilers.

THE AMERICAN FLORIST

America is "the Prow of the Vessel; there may be more comfort Amidships, but we are the first to touch Unknown Seas."

Vol. IV.

CHICAGO AND NEW YORK, OCTOBER 1, 1888.

With Supplement. No. 76.

THE AMERICAN FLORIST

Copyright, 1888, by American Florist Company
Entered as Second-class Mail matter.

Published on the 1st and 15th of each month by

THE AMERICAN FLORIST COMPANY.

GENERAL OFFICES, 54 La Salle Street, Chicago.

EASTERN OFFICE,

Room 15, Vanderbilt Building, New York.

All communications should be addressed to the
general office at Chicago.

ADVERTISERS will find at top of first column of the 13th page of each issue the latest date at which ads. can be received at this office in order to secure insertion in following issue. Send in your adv. as early as you can. Please do not wait till the last moment.

THE FLORAL DECORATIONS on the occasion of the lunch of sea food tendered to the S. A. F. at Queens the Saturday after the convention by V. H. Hallock & Son, consisted of some thirty acres of blooming gladioli, with a few acres of blooming tigridias, dahlias and lilies on the side. No grander decoration was to be seen anywhere.

CONVENTION PHOTOGRAPH.—We have received a copy of the photograph of the members of the S. A. F. taken in a body at Iona Island, August 24, from Messrs. Rile & Co., of Philadelphia, the photographers. It is an excellent photo for one showing such a large number of persons for it is rarely that every one in such a crowd can be kept quiet long enough for the purpose. In this case, however, absolute quiet seems to have been attained, and a very distinct photo was the result.

Your Fall Trade List.

Print your FALL TRADE LIST in the AMERICAN FLORIST. It will cost you less money and do you more good than to print and mail your list yourself. We will print and mail your list, in the columns of this paper, to 5,000 buyers for much less than the postage alone would cost you. A full page in the FLORIST costs only \$42 for one insertion. It would cost you twice that sum to get up a list of your own and mail it to 5,000 addresses. Think it over! We can save you money and secure you better results at the same time, for the FLORIST is preserved while your trade list otherwise mailed would rarely be kept on file. We will print extra copies for you—from the type after being set—at a nominal rate if you wish extra ones to mail in response to requests. If half a page is large enough it will cost you but \$21 for the service.

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

1.

Thanks for the roses, they are superb. They prove that the temperature and humidity of your greenhouses are most skillfully regulated; they show that you understand your calling very thoroughly; but a man may be a most excellent workman and yet fail to prosper simply because his "business methods" are defective. Young men especially are very apt to treat "business methods" with contempt. They are so intent upon making sales that they utterly neglect to keep a record of the business of the day. Now, the law expects a man to be most careful with his books of original entry. It matters little what system of book-keeping he may follow, for a ledger is not admitted as evidence in a court of justice. The law calls for your *books of original entry*, mark my words.

What, you never expect to go to law? Nonsense, you may be sued for a bill of goods to-morrow; the seller claiming that he delivered 3,000 geraniums in 3-inch pots at \$5 per 100, while you maintain that you only received 2,000. Now if your books of original entry are in perfect order you will be safe; otherwise judgment may be given against you. The question at once arises; What did you order? Where is the record of it? If your order book or letter book shows that you ordered 2,000 instead of 3,000 all is well; but if you have kept no record of it and the seller has, why it is plain he has you at a disadvantage. He can come into court with written proof and you with nothing but word of mouth. At once appearances are against you.

You ask me whether a receipt is conclusive evidence of payment. No, only presumptive. That is, it may be shown that the receipted bill was left at your store by some stupid messenger who failed to collect.

Are you obliged to give a receipt? Yes, the law holds that when the *exact sum of money* is tendered a man must deliver a receipt, but there are decisions which hold that a man is not obliged to make change.

Now, you can't be too careful in giving receipts. If on account, state that fact plainly. A receipt is looked upon by the law as proving satisfaction of all debts due at the date it bears. As far as possible pay all debts and claims by check to order. This is the only safe way. But of course you will now and then pay small claims in cash over the counter. In such cases, you must be careful of three things; one is to know whether you have not a claim against the same house in your favor; another, to verify the correctness of the bill, and a third to be sure you are paying the only authorized agent of the creditor.

The moment a shipment of goods reaches you examine it, with a view to ascertain whether it comes up in quantity and quality with your order. If not, or if any of the goods have become damaged by unskillful and insufficient packing, make your claim for rebate by return mail and ask for advice as to whether the shippers are ready and willing to make good the loss; if not, the goods must be returned at once. This is the safest way. Of course it is optional with you to hold the goods and give notice to the seller of the deficiency in count or weight, or of the damage through bad packing and that you will hold him for all loss accruing to you. If, however, it is evident that the damage to the goods was the result of carelessness on the part of the carrier, make your claim at once at the proper office, setting forth the nature and extent of the damage.

I come now to the terms of purchase. This is very important. If you expect only the usual credit it doesn't so much matter; but if you ask for any variations state the terms upon which you expect to make the purchase in full and in plain language. The cash part of the payment you may make as you see fit; but the giving of a note is something which every young business man should do with the greatest care and discretion. The moment some young men find that they can throw their business paper around they are lost. They rush into a credit business far exceeding the limits of their financial strength and meet their ruin.

Ask yourself, what is a promissory note? It is a promise to pay a sum of money for some value received absolutely and without excuses or counterclaims at a fixed date. It is the easiest thing in the world to give a note and often the hardest thing in the world to pay one. Once given, the young business man feels so relieved that he often fails even to make a note of its maturity and is almost knocked senseless when the bank messenger walks into his store and asks for the money! He has forgotten all about it.

Make this a rule of your business life: Ask no more credit than your business can carry. Resist the temptation to turn your legitimate business into a mere game of chance! But, having given the note, see that it at once makes its appearance in all books of original entry, day book, bills payable, business calendar and in your private memorandum book. Keep it before your eyes. You can't tell who will be the holder of it when it becomes due. It may be your business rival will step into your store and present it. Think of the mortification, to say nothing of your loss of credit, should you be obliged to make the humiliating confession: "No funds to meet it."

But you must bear in mind that there is another way to work into a credit sys-

tem besides giving notes, and that is to indorse them. You are just beginning business, you are anxious to make sales. Some one wants 5,000 rare bulbs. You take his note indorse it and your bank discounts it. Everything looks bright and promising. You have cleared a hundred dollars. You increase your glass several hundred square feet, put out your own note for necessary materials. Like a bolt out of the clear sky comes word from your bank that the discounted note has gone to protest and that your account is two or three hundred dollars short. What's to be done? A cold perspiration gathers on your forehead. The hole must be filled at once, cost what it may. You rush off to some money lender who slaves your note at a ruinous rate and probably insists upon a chattel mortgage on your whole establishment as security for the loan.

I look on the dark side, do I? Well, perhaps I do; but ask yourself this question: "Who are the successful men of the day?" While you may find here and there business men who have made a fortune by a series of brilliant speculations, you find hundreds who have lost fortunes by a turn of the wheel of chance. Money easily made is easily lost. It is the careful business man who is satisfied with legitimate profits that wins in the end.

To resume: If at any time you find that you shall be unable to meet a note don't wait until it is presented. Take time by the forelock. If you know where the note is confer with the holder, state the case frankly, make a partial payment and get an extension. See to it that the payment is indorsed on the back of the note in the handwriting of the owner and holder, and above all, upon taking up the note don't fail to tear your signature from it; but don't destroy it; file it away among your papers.

In concluding this first talk let me impress upon your mind the necessity of preserving your business letters and papers—not in bundles regardless of date and contents; but properly indorsed and filed away alphabetically each year by itself. These are a few of the business methods which I hope you'll adopt and adhere to most tenaciously. By so doing you'll be saved from a vast amount of annoyance, to say nothing of a great saving in money.

UNCLE BLACKSTONE.

From Pittsburg.

The convention was a success. The papers read and discussed were valuable additions to practical horticultural literature, and can well be profitably studied by each member when he gets his printed volume of reports of the convention. Here I would say that it will pay any live florist to remit \$2 and become a member for this year in order to procure a copy, which can be procured in no other way.

The ribbon badges for the V. P.'s, etc. could have—in better taste—been secured by the emblematic silver rose leaf than with the more expensive but meaningless method adopted; the aforesaid rose leaf meanwhile has waxed fat and presented a bloated appearance when compared with the original adopted at Chicago.

It looks odd to see the committee on a national flower made up of two Scotchmen, Henderson and Gray, and one Englishman, Hendrick, although it is true a Yankee girl, Miss Taplin, was afterwards added. I hope she can hold them even.

To the courtesy and kindness of the

New York Club many of the members and their friends enjoyed their first trip on the Hudson river and reveled in the sight of historic Stony Point, West Point, Tarrytown, Sleepy Hollow, Tappan Zee, Spuyten Duyvel, Irvington, etc. From the deck of the steamer the location of the residence of Washington Irving was pointed out. J. Gould's residence was conspicuous, as were many of the grandest private establishments on the continent. Exclamations of delight were frequent as friend P. pointed out the places of interest when steaming up the beautiful river.

The executive committee deserves great credit for the labor they bestowed in digesting the matter to be brought before the meeting; next time, however, they should take steps to secure prompt opening at the hours advertised. M.

September 11.

Notes.

ONCIDIUM PAPILIO.—This beautiful species is a native of Trinidad and Central America, and consequently requires a warm atmosphere. It will do well on a block, but I have succeeded best by growing it in a comparatively small pot filled to the top with small potsherds and charcoal with a little coarse sphagnum pressed firmly around the roots. It requires plenty of water when growing and should never be allowed to dry out even when at rest. The compressed pseudo-bulbs bear a single green and brown spotted leaf, and send up their spikes during summer from the matured bulb. The flowers are borne singly and are pale golden yellow interspersed with brown; the same spike continues to bloom for several years and should therefore not be cut. There are several varieties of this species, the white one (*O. P. Album*) being the rarest.

ONCIDIUM LANCEANUM.—This is a lovely species with large fleshy leaves and scarcely any pseudo-bulb. I have seldom seen it in a flourishing condition, but it is by no means a hard plant to grow. It should be grown on a block of wood placed in a pot filled with charcoal and potsherds, the pot set in a saucer of water, in fine weather syringing over head once or twice a day is very beneficial during its period of growth, when at rest however, it should be kept almost dry, watching that the plant does not shrivel. The temperature of the East Indian house suits it best and it should on no account be placed in a cool house, even when at rest, or it will spot. It is found in New Grenada and Guiana on the branches and bare trunks of trees. The flowers are large and fragrant, sepals and petals pale green, barred and marked with brown, lip rose and violet. There are several varieties but all are handsome and worth growing.

CATTLEYA ELBORADO.—This species is easily grown by placing it on a block with a little sphagnum, and giving a position in a warm moist house with copious syringing during the growing season, after the growth is finished

enough water should only be given to keep the bulbs plump; the flowers are pale rose with an orange spot on the base of the lip. I have at present the white variety *C. E. virginialis*, in bloom. The flowers with the exception of the orange spot, are pure white, it is a native of Rio Negro and Rio Japura, Brazil.

LÆLIA PRÆSTANS is a pretty dwarf species, growing six or eight inches high. The bulbs are slender and the leaves bright green, if grown in a warm moist house it will bloom twice a year. It does best in a pot filled with small potsherds and a little coarse sphagnum pressed firmly around the roots. The flowers are comparatively large, sepals and petals broad, pale rose color, lip crimson, throat white with crimson crest, resembling lines, it is a native of Brazil.

All of the above species will do well in the moss used for filling wire forms (*Dicranum scoparium*) where coarse sphagnum is unobtainable.

Pittsburg, Pa.

R. M. GREY.

Long Island Notes.

BY WM. FALCONER.

PRIMULA OBCONICA doesn't set as many seeds as our growers could sell by a very great deal.

EUPHORBIA HETEROPHYLLA will boom next year. This is an annual species indigenous to Texas and Mexico, leafy after the fashion of a poinsettia, and which from the first of August onwards, displays brilliantly blazed orange-scarlet bracts or flower leaves. It is not as showy as the poinsettias of winter hot-houses because the leaves are not altogether red as in the case of the poinsettia, but instead are smaller and green bordered and with the broad scarlet marking in the middle of them. I used to grow this plant ten years ago, but like many another old foggy had to wait for some better business man to give it to the people.

DOUBLE FLOWERED ABUTILONS.—Andrew S. Fuller tells me that he hybridized and succeeded in getting the double flowered *Abutilon Thompsoni* to set seeds with him, and from these seeds raised and grew some 4,000 plants and bloomed every one of them. He expected to get some other double forms, a departure from the mother, but to his chagrin among all of his 4,000 seedlings not one at all had double flowers, but they presented a great variety of different colored blossoms.

WHAT A FUSS these new French cannas are raising in England. For short we call them gladiolus-flowered. Some are tall-growing, some dwarf, some yellow, terra cotta, cherry, crimson, and crimson-scarlet flowered, and others streaked and spotted. Some have pale green, deep green, glaucous green, bronzy and crimson foliage. Hallock's folks at Queens have lots of them in bloom now, I saw them there the other day, and I believe Dreer also grows a lot of them.

YOUNG & ELLIOTT's people have devised a shute by which they slide the boxes and hampers of plants from their upstairs auction rooms down and out into the wagons on the street.

I HAD *IPOMÆA BONA-NOX* seed from two sources last spring and in both instances they have turned out to be *I. muricata*, a purple-flowered evening blooming sort. Mr. Miller tells me that this is the same kind he grew under the name of *I. Bona-Nox* at Wading River last year. But I also have got the gen-

TWO NEW BASKETS.

vine article and from seed too, got it from my old friend, Wm. Thompson, of England. It is now in bloom and lovely. The expanded flowers are $6\frac{1}{2}$ inches across, white, fragrant and the tube $3\frac{3}{4}$ inches long. These are moons in earnest. Although we may treat it as an annual it will bloom earlier and more abundant if treated as a perennial. Of course it is tender. The *L. muricata*, although not showy, is an extremely free bloomer and it begins to bloom early in summer and continues in flower till killed by frost.

CHINA ASTERS.—Between Burpee, Veitch and Germany I thought I had got hold of a pretty good lot of asters, but L. W. Goodell, of Dwight, Mass., who came to see me at convention time tells me he can beat me. About the first of September he had 40,000 asters in bloom! He believes in Comet, which was a novelty a year or two ago.

MR. SANDER, the great orchid merchant, of St. Albans, England, is now in this country, having arrived here a week ago. For the past two years he has had a permanent agency in New York with temporary quarters in Jersey City. He has now completed arrangements for a large property at Summit, N. J., and is to begin immediately to build a permanent orchid establishment there. Before returning to England he intends visiting Albany, Rochester, Chicago, St. Louis, Cincinnati, Easton, Philadelphia, and all other places where orchid collections are being formed. He has now gone on to Boston. Between 16 and 17 years ago when I first knew Mr. Sander he was foreman to Carter's people at Forest Hills, near London; to day he is the largest orchid merchant on the face of the earth. Just see what business capacity, vim and perseverance can accomplish! Much of Mr. Sander's success in America is due to Mr. Fosterman, his agent here; and who is one of the most ardent, gentlemanly and popular men in the business.

Two New Souvenir Baskets.

The vase shaped basket on the left hand side is composed of nearly white braided raffia, woven with fine reddish brown cane and is thirteen inches wide. The top edge has fine scallops. It is filled with *La France* roses.

The long handle basket is eleven inches wide and is bronze and gold in color. It is filled with lily of the valley and clusters of *adiantum*—*A. Farleyense* one side and *A. cucuatum* the other. The rolled edge with ball trimming is very unique. Both baskets are designed by Jansen and filled by Hanft Bros.

Floriculture at the White House.

While going through the White House conservatories at Washington last June, I particularly noted superb collections of fuchsias and fancy caladiums, both of which are extensively used here for decorative purposes. The collection of fuchsias, containing between 300 and 400 plants, in fifty varieties, was by long odds the best I have seen for many a day, and through the courtesy of Mr. Pfister, the genial, capable head gardener at the White House, I am enabled to present readers of the *FLORIST* with the following brief outline of his cultural methods. Fuchsia cuttings are put in during November and December, potted off as soon as well rooted and shifted on from time to time until they are in 8 or 9-inch pots, Mr. P. prefers the latter size for decorative purposes, some few, however, he grows in 6 inch pots. In order to get plants of different sizes some are pinched back, the others being allowed to grow ahead, these latter make fine pyramidal plants, those grown by Mr. Pfister being perfect beauties, ranging from four to seven feet in height, according to variety and covered with flowers from the pot to the top of the plant. They are kept in a temperature of 45° to 55° , with plenty of air and room. For potting soil Mr. Pfister uses a compost consisting of two

parts well rotted sod and one part rotted leaf mold with sufficient sand to lighten the soil. To an ordinary wheelbarrow full of this compost a 10-inch pot full of crushed charcoal is added with a view to keeping the soil sweet and pure.

Mr. Pfister's caladiums are started early part of April in 5 and 6-inch pots according to size of bulbs, using the same compost as for fuchsias, minus the charcoal. As soon as the pots are well filled with roots the plants are shifted into 7 and 8-inch pots, a liberal supply of well rotted cow manure being placed over the drainage of each. They are then kept in a temperature of 55° to 70° , given plenty of room and by middle of May are ready for decorative purposes. The bulbs are kept dry from November to April. Both the fuchsias and caladiums are grown with a view to having them in condition by May, to take the place of such decorative plants as crotons, dracaenas, etc., which are then placed under treatment for next season. I also noted a nice batch of coleus grown—if I remember right—in 6 and 7-inch pots. They were not the largest specimens I have ever seen, but they were most unquestionably the cleanest and neatest grown.

I saw some excellent examples of carpet bedding in the White House grounds, but I find in my note book particular reference to two immense beds of crotons that in themselves amply repaid me for my visit. The beds were twenty-five feet in diameter, with about 350 plants in each, seventy-five varieties being represented altogether. The crotons were planted with such strict attention to height and color as to produce a most charming effect, none the less pleasing because this style of bedding has not yet been overdone. Mr. Pfister considers that the crotons best adapted for bedding purposes are, of the high colored varieties: Baron de Rothschild, Multicolor, Queen Victoria, Interruptum, Evansianum and Disraelii; and of the light or yellow marked varieties: *Acubafolia*, *Mooreana*, *Cornutum*, *Ovalifolium* and *Elegans*. Baron de Rothschild he considers the brightest and best variety of all. A bed of it alone would make a fine show. A. W. M.

California Notes.

A Chicago florist traveling in California writes: "I have been sight-seeing in San Francisco, Oakland and Alameda, also at the California Rose Co.'s place on Vernon Heights. Rose growing is here done in a very crude manner, at least that which I have seen so far. Everything out of doors looks very barren except where irrigation is done, still the trees seem to keep green and stand the dry season remarkably well. Fruit is very abundant and large but I consider the flavor very inferior to eastern grown fruits. Vegetables are the same. Good sweet corn cannot be had here. There are many other things which are new and interesting to me and I hope at some future time to write you further."

PHLOX ROYALTY.—This hardy phlox bears flowers of a beautiful crimson-scarlet shade which makes it very desirable. If the first heads of bloom are cut away new ones will come from the side buds.

CALIFORNIA PRIVET makes a handsome hedge in the eastern states. It grows quick and its glossy compact foliage is very attractive.

A Pennsylvania Rose Plant Factory.

In the greenhouses of the Dingee & Conard Co., West Grove, Pa., probably more young roses are grown than in any other single establishment in America, sixty-four greenhouses being used for the purpose.

A visit to their place and an inspection of its appointments and the system with which work is there conducted suggests at once the idea contained in the heading. It is a rose plant factory conducted on factory principles. One of the first things to impress the visitor is the cleanliness and neatness of the houses, sheds, etc. No dirt, decaying foliage or rubbish of any kind is permitted to accumulate anywhere. Everything is kept sweet and clean. The walks are of clean sand, taken from the propagating beds after being once used, and muddy walks are not encountered anywhere, though there are neither board nor cement walks.

The ranges of houses are divided into sections, each section being under the care of a man who is responsible to the general superintendent for their condition. So thorough is the system employed that all the houses without exception presented the same neat appearance and with the plants all in vigorous health.

A curious fact in connection with this large establishment is that all the houses are heated by old-fashioned flues and the watering done with the watering pot, going to assure the small florist that the secret of successful growing does not depend upon the possession of modern heating apparatus, and that the flue may still be used to advantage even with the vigorous competition of the present time. Through the houses are open cisterns without number, all the rain water from the roofs of the houses being carefully saved.

In the potting sheds were noted portable potting benches which could be placed as required to save the most labor in carrying plants when potting or repotting. They were similar in construction to the one illustrated on page 6 of No. 49 of the FLORIST.

Summer propagation is done in the houses the same as in winter. The sand used is a very coarse bank sand, which is used for but one crop of cuttings. Mr. Wintzer states that he uses the same sand for rooting two crops of cuttings of shrubs, but will not risk a second crop of rose cuttings in the same sand. The sand after having been once used in the propagating bench is taken out and fresh substituted for the next crop. We mention this fact particularly, not as new, but in view of the fact that many propagators of the rose do not seem to appreciate the value of the point, though it has been thoroughly demonstrated. The changing of the sand prevents to a great extent the formation of the fungus, so destructive to rose cuttings. The fungus is always more likely to be troublesome with sand which has been used several times than with that which is fresh. In all our practices it will be found that "an ounce of prevention is worth a pound of cure." Common roofing slate is used for the bottoms of the benches. The first cost is said to be but little more than that of boards and in durability and freedom from fungus are of course far superior.

Only virgin soil is used for potting, the object being to produce a small, hard well-matured plant for mailing.

The entire product of this establishment is shipped by either mail or ex-

press. Their system of handling mail orders differs somewhat from that of most similar places. When the orders are sent to the packing house printed wooden labels for each of the plants in the order are selected from a case laid out much like a printer's case, with another label bearing the name and address of the customer, and the one who fills the order attaches the labels to the plants as he selects them. The plants, with the address label, go to the packer. In this way the order is retained at the desk and is handled by but one man, who is familiar with the stock, and keeps check on those who gather the orders.

A number of novelties in roses were noted, but none gave at present any indication of being of unusual value. A sport from Souvenir d'un Ami with a white flower, which originated here, is being grown for trial. The flowers seen were on rather small plants and the blooms were but of medium size, but if the sport should have blooms equal in size and the plants have the vigorous constitution and freedom of the Souvenir it will undoubtedly be of value.

Several houses filled with young plants of the hardy hydrangea (*Hydrangea paniculata grandiflora*) were noted, and several acres of the same valuable shrub in nursery rows were to be seen in full bloom. They are propagated from cuttings taken in July from plants growing out of doors, and rooted in the propagating house. They are then potted, five cuttings in a 4-inch pot, kept inside until they start, then hardened off outside and kept dormant over winter in a root-house. In the spring they are planted out in nursery rows and grown till fall when they are lifted and again stored until wanted to fill orders. From the stock of this popular shrub seen at this place we believe there will be no shortage the coming season.

The office of this concern is presided over by Messrs. Dingee, Conard and Leahy, while Mr. Antoine Wintzer is superintendent of the factory, and Mr. Benj. Connell of the packing department.

Best Roses for the General Florist.

In response to a request for the names of a dozen roses which were in his opinion, the most profitable for the general florist to grow, to sell as pot plants and for bedding, Mr. Antoine Wintzer, of the Dingee & Conard Co., West Grove, Pa., gave the following:

Of teas, Marie Guillot, white; Coquette de Lyon, light yellow; Etoile de Lyon, deep yellow; Comtesse de la Barthe, pink; Mme. de Watteville, light blush yellow; petals bordered with bright crimson; Mme. Welch, amber yellow, coppery yellow in center; La Princesse Vera, white shaded with rosy crimson at base of petals, and Aline Sisley, light cherry red; of Bourbons, Hermosa, bright rose; Souvenir de la Malmaison, flesh color; of Bengals, Queen's Scarlet, rich scarlet; of hybrid-teas, La France, peach color.

With one exception all of those named are comparatively old and well known roses, which have been thoroughly tried.

In starting to grow pot roses for market the florist is generally puzzled to know which are best adapted to the purpose and will return the most profit, and it was with the view of assisting such in their selection that the above list was secured. A mistake made by many is to select a large number of varieties among which are usually many not at all adapted to the purpose in view. For the average florist a dozen varieties is all sufficient,

while if only a limited number of plants are to be grown even this list could be cut down with advantage. Confining yourself to a few varieties and doing them extra well will pay the best.

Queries.

ARE THE classes of roses known as polyantha, likely to prove valuable for winter flowers? K.

IN A RECENT NUMBER of the AMERICAN FLORIST rose "Mme. G. Bruant" was figured. Would you, Mr. Editor, or any of the readers of these pages recommend it for winter blooming? T.

[From what we have heard of the rose we should not recommend it for that purpose. Mr. Hill probably has an opinion to advance.—ED.]

WHO WAS the first man to force the now very popular La France for winter blooming? And in what year was it? Positive dates are what is needed. No guessing. Don't too many speak at the same time. BOO.

PRIMROSE DAME rose was recommended by M. A. Hunt at the convention as being the only variety introduced within the past two years that was worthy of trial for cut flowers in winter. Has it been tried in the critical eastern cities—Boston, New York or Philadelphia? E.

JELLY made from the fruit of *Rosa rugosa* is said to taste something like peach jelly, only more so.

Autumn Planting of Trees and Shrubs.

The advantages of planting deciduous trees and shrubs during the autumn are so great that we would invite their careful consideration.

Transplanting makes inevitable the cutting or disruption of a large portion of the roots. These cannot throw out new fibres and grow again until the broken roots become callused. This process requires some time, and if it is not completed before the spring drought comes, there is great danger that the plant will either die or have a struggle for life during the heats of the first summer. If planted late in the autumn the broken roots will have abundant time during the winter to become callused, and will thus be ready to throw out fibres in the spring and to withstand its dry weather. If planted early in the autumn, in October, the broken roots will not only have time to form a callus, but may throw out small fibres which will permanently establish the tree or shrub and make it safe against the cold of the following winter or the heat and drought of the ensuing spring and summer. The experience of the last spring, with the possibility of its recurrence shows the importance of fall planting.

Those who desire trees are accustomed to think that vegetation will not prevent transplanting until the first of May, and delay their orders accordingly. Even if they do not delay their orders, the rush in the spring makes it impossible for any grower of trees to finish delivery before that time; some purchasers must inevitably be among the last.

In the spring of 1886 there came in April unprecedented heat. From the 19th to the 25th, the thermometer ranged from 77° to 88°, and deciduous plants sprang at once into full leaf. Many who had large grounds to plant, and had not yet sent in their orders were deterred, and with new houses occupied, were obliged to look upon naked grounds for a year.

NEW CHRYSANTHEMUM MRS. JOHN N. MAY

Had they ordered the previous autumn and, if not ready to plant, heeled in carefully until spring, they would not have been in this position.

While the tree or shrub will callus and form roots, as well if carefully heeled in, as they will if planted permanently, yet, if everything is ready, it is better to plant permanently in the autumn, because the ensuing rains will settle the soil firmly about the roots, and thus prevent access to them of the hot air of a spring drought. We would emphasize the statement that even if purchasers are not ready to plant until spring, it is better to obtain their deciduous trees and shrubs in the autumn, heel them in carefully in a slanting direction, when the callus will form and they will be ready for planting as soon as the ground is open in the spring. Autumn planting is especially necessary with roses, larches, Japan quince, evergreen thorn and other plants which become excited by the first mild days of spring, and in that condition may die by transplanting. The exceptions to these remarks are magnolias, tulip trees, etc., in which there are certain structural conditions which make them succeed best in spring planting.

Rhododendrons can always be planted to advantage during September. Coniferous trees can also be planted during the last days of August and the first days

of September, provided the season is a moist one, and the ground in which they are planted is sufficiently near to the nursery for them to escape heating in transit.

Another argument in favor of fall planting is that then gardeners and laborers are all at leisure, there is none of the pressure inevitable in spring, and the planting can receive better attention. For all these reasons autumn planting of deciduous things is the bridge between effort and success. S. B. PARSONS.

New Chrysanthemum, Mrs. John N. May.

This is a large Japanese variety resembling Mrs. Frank Thompson, but the flowers are more incurved and there is more color, being of a delicate though lively shade of pink. In growth it is vigorous but dwarfer in habit than that well known variety. It is a free bloomer, fine either for cut flowers or as a pot plant.

Hardy Ornamental Shrubs.

Many florists already carry a limited stock of these, and we believe that it will pay every florist who sells bedding plants to carry a well selected stock of ornamental hardy shrubs, always provided he has room for a little nursery. We do

not believe that it will pay the average florist to grow this stock, but merely to buy and sell. A small plot of ground holding what might be called a sample lot would be sufficient. He could arrange with some reliable nurseryman to send each fall or spring stock sufficient to fill the orders he had taken during the previous summer. We believe that florists could in this way add quite an item to their income and at the same time further foster the love for natural beauty. If it could possibly be so arranged, by far the best way would be to lay out your own place with shrubs in as attractive a style as possible, keeping each tree and shrub labeled and you can then soon tell a customer whether a certain shrub will do well in your locality or not, as well as having a standing advertisement which would be of great value to you.

It must be admitted that very many florists places are anything but attractive after the first frost, as all tender stuff is housed and there is nothing to break the monotony except the piles of dirt, old boards, broken glass and other rubbish which generally abounds. A very small quantity of ornamental shrubs with a few evergreens, would do much to relieve the barrenness of the place and inspire a respect in the minds of your customers which in many cases is not now felt. A person can not be blamed

for feeling doubtful about intrusting the beautification of his grounds to one whose own place looks like a desert.

Don't be so narrow minded as to imagine that your sales of hardy stuff will lessen those of bedding plants. This has been proved a fallacy. In fact the reverse is true, for the shrubbery will be used merely as a beautiful background for your bedding plants, and as the customer begins to grow interested in the various and beautiful effects he may produce with both together he will increase his purchases of both. The large buyer of one will invariably be the large buyer of the other.

We believe that the florist can in this way largely supplant the "tree agent," who in many cases merits the abuse he receives. A customer invariably prefers to deal with one who is known to be responsible and one who can be found again if the goods prove to be not as represented. In addition the florist who dealt in shrubs in this way could for a small charge send his men to do the planting and in that way avoid many complaints which come to the distant nurserymen from inexperienced buyers, who simply dig a hole, drop the tree in haphazard and expect it to grow like a weed without further attention. The florist being in closer connection with his customers could also give them many "pointers" on caring for their shrubs, of which the average tree agent is as innocent as a babe. There are a large number of reliable nurserymen from whom supplies can be had at prices which will allow of a very good profit to the florist who deals in them. Now is a good time to plant a sample lot. Why not begin now and give the matter a fair trial. We firmly believe it will pay you well.

We append a list of stock which would be most desirable for a florist to handle in the manner named.

DECIDUOUS SHRUBS.

Daphne Mezereum, red flowers, small bush, blooms in April.

Magnolia conspicua, white, large shrub, May.

Forsythia Fortunei, yellow, flowing bushy habit, April and May.

Cydonia Japonica, scarlet, also white, dense bushy habit small to large, April and May.

Lonicera fragrantissima, medium sized bush, very fragrant white flowers, March to May.

Spiraea Thunbergii, airy bushy habit, not large, white flowers, May.

Spiraea Van Houttei, upright and arching habit, medium size, white flowers, late in May and early in June.

White Persian lilac, large shrub, May.

Common Lilac, Marie Legraze, white, May to June.

Exochorda grandiflora, white, end of May, large open bush.

Pyrus Parkmani, small to large shrub-tree, blooms when quite small, crimson and white, May.

Deutzia gracilis, white, dense bushy low-growing, end of May or first of June.

Diervilla candida, white, small to large open shrub, June.

Diervilla rosea, blooms when quite small, but eventually becomes a tall flowing shrub.

Viburnum plicatum, small to large shrub, pure white, June. Best of the snowballs.

Philadelphus grandiflorus, large shrub, white, June.

Deutzia crenata, double-flowering variety, white, June, medium to large sized shrub.

Stuartia pentagyna, strong bushy habit, large white flowers, June and July.

Spiraea Bumalda, pink, in terminal umbels, June and all summer. A small shrub often with partly variegated foliage.

Lepedeza bicolor (not *Desmodium penduliflorum*) purple pea flowers, July, medium size.

Hydrangea paniculata (the typical form) white, showy, July and August.

Hydrangea paniculata grandiflora, white changing with age to rose-purple, a large shrub, but in order to have good flowers cut it hard back every year. August and September.

Althæa, double-flowering red. Cut it hard back every spring. August and September.

Chinese *Tamarix*, rosy spray in August and September. Tall shrub. Old unpruned plants bloom most a month ahead of those cut hard back last winter.

EVERGREEN TREES.

These, if need be, for 20 years may be maintained in the proportions of shrubs. Nordman's Fir (*Abies Nordmanniana*).

Concolor Fir (*Abies concolor*) Colorado mountain stock only.

Douglas Fir (*Pseudotsuga Douglasii*), Colorado mountain stock only.

Colorado Blue Spruce (*Picea pungens*), get the blue-colored varieties and of Colorado mountain stock only.

Engleman's Spruce (*Picea Englemanni*), with same observations as applied to Blue Spruce.

Blue White Spruce (*Picea alba* var. *cærulea*).

Red Pine (*Pinus resinosa*). One of our most beautiful native trees.

White Pine (*Pinus Strobus*). Our common eastern pine, but unsurpassed in beauty by an exotic species. There are compact and dwarf forms of it too and all very fine.

Swiss Stone Pine (*Pinus cembra*). Very hardy and of somewhat dwarf columnar form.

Retinospora obtusa, arbor-vitæ-like and one of the finest evergreens we have had from Japan.

Retinospora pisifera, more feathery-like and spreading than the last.

American Arbor Vitæ, George Peabody, the finest of the golden variegated sorts.

American Arbor Vitæ, Douglas' silver-tipped, a very hardy thrifty form, white variegated.

Japanese Yew (*Taxus cuspidata*), the hardiest of the yews.

Among lesser evergreens for massing, *Yucca filamentosa*, grand in early July. *Rhododendrons* *Everestianum*, *Roseum Elegans*, Lee's Purple, Abraham Lincoln, Album *Elegans* and *Gloriosum* are among the hardiest of the hybrids.

All evergreens, no matter how hardy they may be, require shelter, especially from the biting winds of winter. In the case of some of our western firs and spruces it is imperative that we get Colorado mountain stock, as this is perfectly hardy, whereas the same species raised from Californian or Oregon stock are not hardy in our northern states.

Another Bug.

"What, what's the matter, Charlie?" I asked when I met Charlie Sander, Prof. Sargent's gardener, and a couple of Harvard scientists tearing up the road towards the garden like an engine company to a house on fire. "Bugs, sir, bugs. My chrysanthemums are ruined." So I turned and joined in the chase. In the tips of the shoots we found a smart little

silvery-winged blackish insect not unlike a chinch bug, also two immature stages of the same, and all in considerable quantity. Their movements were very quick, but the learned men gathered and bottled enough of them to submit them to the eminent entomologist, Dr. Hagen, for his opinion. I afterwards learned that it is "A minute hemipterous insect, *Triphleps insidiosus*, closely related to the chinch bug." The mischief it did consisted in searing the opening and unopened tips of the young shoots and disfiguring and deforming the young flower buds. When I returned home I examined my own chrysanthemums, for I grow 1,200 plants and was very anxious about them, and I found the very same insect and in about the same numbers at work on my own plants. Still I don't see anything to be alarmed about, the mischief done so far isn't enough to disfigure the plants or spoil their blooming to any great extent. W. F.

New Chrysanthemum Walter W. Coles.

This new Japanese chrysanthemum is said by some good judges to be one of the most valuable varieties Mr. W. K. Harris has raised. The flower is very large, brownish orange or terra cotta in color and semi-double.

Boston.

The cut flower trade, both local and shipping, has started up in earnest. Such an early start speaks well for the coming season's business.

Two recent deaths, that of Col. Wellington, of the 1st Massachusetts regiment, and the veteran comedian, Warren, have given our florists a big boom of funeral work. These two funerals called for some of the most elaborate designs ever seen here.

Peter Henderson was seen in Boston a few days ago. It was only a chance view however for it was unheralded and he turned neither to the right nor the left, but when the smoke had cleared away it transpired that he had bought the whole stock of Mr. Bock's new dwarf white *bouvardia*.

The stock of the Riverside Conservatories has been sold at auction. Auction sales of plants from W. C. Wilson and R. J. Halliday, and of orchids from F. Sander & Co., have been held during the past week. Attendance good and prices fair.

The sixtieth annual exhibition of the Massachusetts Hort. Society took place on September 18-19-20-21. The weather was very unfavorable and the attendance light. The display of fruit and vegetables was surpassingly good, that of plants very small, and that of flowers disgraceful. Detailed account of the exhibition will appear in next issue. W. J. S.

New York Notes and Comments.

Three big orchid sales in succession; F. Sander & Co., of St. Albans. F. Man, of Weehauken, and W. Matthews, of Utica. The first two realized ridiculously low prices: as for the third it is now a thing of the future. There were fine plants in both these former sales; some specimen *Lælia purpurata* in Mr. Man's lot were really magnificent. One mass with 67 bulbs and 35 leaves brought \$26. Another plant, described as a splendid variety, with sepals and petals pure white and dark lip, was sold for \$5. A large proportion of the plants were cer-

NEW CHRYSANTHEMUM, WALTER W. COLES.

tainly sold much below their value, unless we think that an orchid is only worth what it will bring.

It appears as if there will be plenty of orchid flowers in the market this winter; the growers will have a chance of deciding whether they pay or not. The retailers, in many cases, say they can't make much money by them. One large up town florist who handles a good many fine flowers, declared that he lost money in orchid blooms. He received few direct orders for orchids; when he used them they were put in without previous directions to give a finishing touch to some basket or the like. The impression was given that the people who would make orchid flowers pay are the growers who have stores of their own. It would not make so much difference to them if they did not always sell the blooms, because they still have the chance of realizing by selling the plant. Doubtless the market for such flowers will increase, and such increase should make them more lucrative, but few retailers believe that any

mau will realize a fortune by raising orchid blooms only. And mighty few commission dealers express a wild longing to handle these flowers; during past seasons the growers have usually found that the only way to dispose of such stuff was to apply directly to the retailers. It is pleasing to know that such flowers as *odontoglossums* and the like are appreciated in bouquets; the plants may be purchased for a mere trifle, and as they take up little room and require comparatively little attention a grower can't lose very much by them, even if the blooms bring small prices.

It is interesting to know that *La France* which had been grown in the open air down south appear free from liability to black spot when forced. At one well known growers these plants were perfectly healthy and vigorous, while the same variety raised here were sorely afflicted with the pest. Of course the spot may yet appear on the southern plants, but so far they seem clean enough.

Julius Roehrs is going in for palms,

like a great many others. If he is as successful with them as with his hybrid roses he will be a formidable competitor for those already in the field. He is growing on a lot of West Indian palms. Mr. Roehrs has just returned from a trip to Europe.

One Philadelphian, who recently imported 10,000 seeds of *Areca lutescens*, proudly states that the result is over 10,000 young palms. However, the excess is due to there having been a number of seeds thrown in, but the grower says that at least 98 per cent of the seed germinated. A pretty good showing, is it not?

Just now the trade in decorative plants is tolerably brisk, the various trade palms and *paudanus* being in demand. Perhaps there is much more *Pandanus utilis* sold for trade purposes than *P. Veitchii*, yet the latter has two good qualities in a higher degree than the former. It does not become rusty when grown in the house, and it will get along quite comfortably in a water-tight pot without any

drainage, or at least with very little drainage.

How many growers raise *Ardisia crenulata* in any quantity? Very few, and yet what a useful thing it is, clean looking, handsome and easy to manage. Around the holidays it is much to be admired when well berried. A good house plant, too.

A good many out-of-date plants are being revived nowadays; there is for example, the old-fashioned *Linum flavum*, which is suggested for forcing. Doubtless it would flower freely enough, and its bright yellow hue is decidedly pleasing, but it is not likely to stand very well after being cut.

There has been an effort during the past year to give a little "boom" to gardenias—"it's English, you know"—but few florists really look upon them with favor. They soon turn yellow, and they show an ugly brown bruise almost if one looks hard at them, and they usually have short stems. So retailers just keep a few to satisfy a very small demand, but there is little money in them, either for grower or retailer.

EMILY LOUISE TAPLIN.

Wilmington, Del.

The first annual exhibition of the Peninsula Hort. Society held in this city September 18 to 21, was of undoubted excellence. The floral display was very large and meritorious. Among the exhibitors in this department were Geo. W. Childs, of Philadelphia; Benjamin S. Turner, of Baltimore; Wm. Bush, Chas. S. Horn, M. F. Hayden, J. W. Lewis & Bro., J. L. Brown & Co., L. E. Baylis and John Brinton, of this city. An exhibit of aquatics was made by E. D. Sturtevant, Bordentown, N. J.

A table decoration by Chas. Fox, of Philadelphia, was very handsome. In the center of the table was a miniature lake of water an inch deep with a mirror at bottom which reflected the mossy banks, on which were growing small fancy caladiums, adiantum ferns and other plants. The outer edge was studded with Bennett, Meteor and American Beauty roses. At the ends of the lake were bunches of American Beauties. At the ends of the table were horns of plenty of roses, while the corners of the table were draped with clusters of roses. Other handsome floral designs were shown by H. C. Sheaffer, of Philadelphia, and J. L. Brown & Co., of this city. R. W. Hargadine, of Felton, Del., exhibited 75 varieties of cut roses all labeled.

Premiums were awarded to J. L. Brown & Co., L. E. Baylis, M. F. Hayden, J. W. Lewis & Bro., G. W. Brinton & Son, Benjamin F. Turner, John M. Hughes, H. Hannum, R. W. Hargadine, Chas. S. Horn, Mrs. James Dilworth and Mrs. Jos. Graham.

Chicago.

Numerous changes have been occurring among the wholesale florists recently. A. S. Kimball and Fisk & Randall are new concerns which have started into this branch. Kennicott Bros. have increased their store room considerably and fitted it up in much better shape than before. E. H. Hunt is again forcing roses (into boxes) under electric light at J. C. Vaughan's, and S. Pieser, formerly with Kennicott, has migrated to St. Paul and will endeavor to establish a wholesale business there.

Gallagher is again established in his

old store which was thoroughly refitted during the summer, and now presents a very attractive appearance.

The debate at the Florist Club meeting as to the advisability of elevating prices to the seventh floor at the holidays was rather warm and the spirit moved many who had never before ventilated their opinions in open meeting. Some extremely amusing arguments were advanced and considerable fun was had though possibly the convictions of the opponents were not changed to any alarming extent.

Cemetery Superintendents Meet.

The Association of American Cemetery Superintendents held their second annual meeting at Brooklyn, N. Y., September 5, with fifty members present representing the states of Connecticut, Georgia, Illinois, Massachusetts, Michigan, Minnesota, New Jersey, New York, Ohio, Iowa, Pennsylvania and Rhode Island. The larger cities were fully represented.

The business of the meeting was almost wholly given up to the following papers and discussions thereon:

An Ideal Cemetery—F. Eurich, Woodlawn, Toledo, O.
Landscape Gardening in Cemeteries—R. D. Cleveland, Lakewood, Minneapolis, Minn.
Monuments and Headstones—J. W. Lovering, Mt. Auburn, Boston, Mass.
Vaults—L. J. Wells, Greenwood, Brooklyn, New York.
Cemeteries Within City Limits—A. W. Blain, Elmwood, Detroit, Mich.
Funerals—J. C. Cline, Woodlawn, Dayton, O.
Cremation—Geo. Troup, Forest Lawn, Buffalo, New York.
Lawns—Wm. Salway, Spring Grove, Cincinnati, O.
Roads—O. C. Simonds, Graceland, Chicago, Ill.
Management of Laborers—F. W. Higgins, Woodmere, Detroit, Mich.
Lot Enclosures—Geo. W. Creesy, Harmony Grove, Salem, Mass.
Greenhouses and Flowers—John E. Barker, Forest Hills, Boston, Mass.
Country Cemeteries—A. H. Sargent, Glendale, Akron, O.
Question Box.

The following officers were elected for the ensuing year: President, Charles Nichols, Fairmount, Newark, N. J.; Vice President, F. W. Higgins, Woodmere, Detroit, Mich.; Treasurer, L. J. Wells, Greenwood, Brooklyn, N. Y.; Secretary, A. H. Sargent, Glendale, Akron, Ohio. Time and place for next convention is Tuesday August 20, 1889, at Detroit Mich.

A full report of proceedings together with papers presented will be published in pamphlet form in November.

Youngstown, Ohio.

During the summer the cut flower trade has kept up well and promises to continue.

The weather has been all that could be desired for the growth of stock plants during the summer and at present carnations and violets are free from disease. We housed our Catharine Paul and Minze's White carnations about the first of the month, as we find by doing this early they get well rooted and established on the benches before any fire heat has to be used. Chrysanthemums are also housed, such as were in the open ground during summer, and a good many of them have their buds well set, they are ahead of last year in this respect.

N. B. Stover, who has been foreman for E. Hippard, leaves next week for Grand Rapids, Mich., where he starts in business for himself. Mr. Stover is a first class florist in all branches, especially in the culture of roses, and while we regret his departure from our city, we look upon it as a change in the right direction and wish him all success.

Gustave A. Geng has entered upon his duties as gardener for Mrs. Tod, widow of the late Gov. Tod. She intends building a range of greenhouses to take the place of some which were burned down nearly two years ago. "Gus" knows how to grow plants and gardening generally, and if the old "Ted Home" does not get a renovation we are greatly mistaken.

MANSFIELD MILTON.

A Florist's Song.

While on the excursion at New York, during the convention, Mr. Robert Kift, the talented Philadelphia song writer and prestidigitator (no flies on that word), sang a song of his own composition which took his hearers by storm. We give the song in full below:

PROCRASTINATION.

(Air—Climbing up the Golden Stairs.)

You may talk about the good old times, the grand old days of yore,
But the good times a coming next year,
When for every good thing in the past we'll show you full a score,
Oh! the good times a coming next year.

CHORUS:

The good time's a coming, the good time's a coming,
The good time's a coming next year;
Oh! then we'll live in clover and have lots of dollars over,
In the good time that's coming next year.

I suppose I'll have to start it with some words about the market,
The market that is coming next year;
The committee's been appointed and several times anointed,
And will bring in their report next year.

CHORUS:—
The good time's a coming, the good time's, etc.

Now, twelve four-inch for one dollar has occasioned so much squaror.

That they're going to make a change next year;
And to make the cash more plenty they will charge you one and twenty,
Oh, they're going to whoop 'er up next year.

CHORUS:—
The good time's a coming, the good time's, etc.

But I've special information as will bust the combination

Of this grasping growers' trust next year;
Oh! how we'll make them holler when we get them for one dollar
In the good time that's coming next year.

CHORUS:—
The good time's a coming, the good time's, etc.

Now just for the fun of taking, there'll be no more decorating

With a load of plants next year;
For although it may be funny, yet there isn't any money,
And it won't be tolerated next year.

CHORUS:—
The good time's a coming, the good time's, etc.

There's a deal more I could tell you, but you'd think I was trying to swell you

About the good things a coming next year,
So just go and take a rub at the minutes of your club,
And you'll find out all about next year.

CHORUS:—
The good time's a coming, the good time's, etc.

New Chrysanthemum, Mrs. A. Blanc.

This is an extremely showy and distinct sort. The inside florets are erect, outside reflexed and pendulous. Color a rich lavender.

A Convenient Boiler Pit.

Messrs. Siebrecht & Wadley have been making numerous improvements at their place in New Rochelle, N. Y., the past summer. A new feature is a handsome little building to be used as an office, which is very neatly designed and ornamented, connected with a new palm house, a roomy and substantial structure, beneath the whole length of which is the boiler pit. This is a model in its way.

The floor of the palm house, which is

NEW CHRYSANTHEMUM, MRS. A. BLANC.

the ceiling of the boiler pit, is supported by iron beams set about three feet apart and brick arches extend from beam to beam. Thus there are no supporting columns and the whole cellar is clear. The boilers are all ranged on one side and a tramway is being built the whole length of the pit so that coal can be easily carried in a small car from the main coal bin, which is located at one end of the pit, to within shovel reach of each boiler as required. The floor of the palm house is cemented evenly over the arches making a smooth floor in which are set at intervals plates of heavy glass to admit light to the cellar below. The pit is certainly fire proof and for general convenience, where a large number of boilers are to be attended to, it is ahead of anything we have yet seen.

Natural Gas in Flues.

In answer to "Subscriber," (page 64), we would state that we are using natural gas in flues in several houses, each 70 feet long, but in no case does the flue return. The furnace being at one end, the chimney at the other. They give perfect satisfaction, and were we in "Subscriber's" place, would introduce gas and make no change in furnace. Our other houses are heated by hot water, the fuel being natural gas, and nothing could work nicer and give less trouble.

A. M. & J. B. MURDOCH.
Pittsburg, Pa.

Natural Gas in Flues.

I have used natural gas as fuel in flues to heat greenhouses for two years, and

believe that there is no better fuel, provided the supply is full and equal at all times. I turn on the gas in winter as soon as the sun goes down and in about two hours the houses will be warm enough. I then turn it off all but a little and the temperature will be maintained evenly during the whole night unless there should be a remarkable change in the weather. During cloudy winter weather I have maintained the same temperature for several days without looking after the fire in that time.

No change is necessary in the furnace except taking out two of the grate-bars to let the supply pipe through. Use a mixer so you will not have any soot, and broken fire brick for filling. The broken bricks will spread the fire in the furnace.
Bellevue Pa. F. BURKI.

News Notes.

DALLAS, TEXAS.—The seventh annual meeting of the Central Texas Horticultural society was held in this city, August 15.

DES MOINES, IOWA.—W. M. Elrod, formerly of Marshall, Mo., has leased the greenhouses owned by A. W. Prater and located here.

PERU, Ind.—F. B. Tinker, formerly of Painesville, Ohio, has purchased the greenhouse property of G. C. Lange here and will succeed him in business.

PROVIDENCE, R. I.—The annual exhibition of the Lonsdale Botanic society was held August 25. There was a very creditable display of flowers and plants.

JANESVILLE, WIS.—At the recent fair the floral display was very fine. The majority of the first premiums were awarded to W. H. Hill and Walter Helms.

ST. PAUL.—August S. Swanson has purchased the florist business formerly conducted by E. V. Zeales, at corner of Cedar and Second streets, and will carry on the same.

RICHMOND, VA.—A Florists' Club has been organized here with the following officers: President, John R. Hooper; Vice-President, William A. Hammond; Secretary, J. Harry Harvey; Treasurer, T. W. Wood.

FRANKLIN, PA.—T. W. Bell is preparing to erect a new greenhouse 100x18. The Venango County Agricultural Society held its annual exhibition Sept 4-7. Premiums for plants and flowers were offered in eighteen classes.

PITTSBURG.—John R. & A. Murdoch have just completed three new houses each 150 feet long, using wrought iron gas pipe for columns and purlins. Steam generated by natural gas furnishes the calorific when the sun is off duty. Trade was dull during July and first part of September but is picking up with prospects of continuing to improve steadily. Palm leaves (*Cycas revoluta*) are likely to be in demand for funeral work.

CLARKSVILLE, TENN.—The Evergreen Lodge Flower Garden has just completed two handsome houses, one 120x20, another 85x20, to keep up with the rapid growth of their business. This concern has not been in active operation more than five years and is now favorably known throughout the whole south. There is twenty acres devoted to the garden, with 25,000 feet of glass. J. J. Crusman is proprietor. Jas. Morton, manager.

NEW JERSEY.—Several greenhouses have been put up in the northern portion of Bergen county, N. J., this summer. At Ridgewood, N. J., Henry Hales is building new houses and putting in a steam heater for his whole plant. Herbert Forbes has built two houses, and Andrew Snyder one. At Ramseys, N. J., George Welch has completed three new houses and Wm. J. Thurston has rebuilt some of his old ones. At Saddle River, N. J., the J. G. & A. Esler Co. have completed an additional house.

ALBANY.—Louis Menand, the well-known florist, was 81 years old July 1, and is in excellent health. He has built up a beautiful place about midway between Albany and Troy, known as Menand Station, easily reached from

either city. Jno. Dingwall has built on Troy road three new houses each 100 feet long by 18, 12 and 6 feet wide. John Munnane has built a new house 60x14. George Porter has erected two new houses—one 72x13 and the other 54x20. C. W. Brown, formerly with James Hendrick, has opened a floral store in Maiden Lane. A. F. Chatfield is demolishing his houses and expects to build dwellings in their place. Mr. Sam Goldring is now one of the firm of H. G. Eyres & Co., who are now succeeding Mr. James Hendrick at his Pearl street store.

MONTREAL.—The Florists' and Gardeners' Club held its first annual excursion and picnic to Otterburn Park August 1. More than 150 joined the excursion and passed a very enjoyable day at this favorite resort, and as all the members are bent on making the club a success, everything passed off very satisfactorily. Games were prepared for the juvenile members of the party and thoroughly entered into, and all were well pleased with the day's outing. The membership of the club shows a steady increase and that, together with the unanimous working of the various committees, augurs much for the future success of the club. Business is not very brisk at this season, but as several of the florists are making additions to their greenhouses it is evidently expected that there will be an increased demand for flowers this winter.

New York.

Alex. McCConnell was married the last day of August to a young lady from Maine.

Klunder is importing several choice basket designs in willow.

Mr. Charles Henderson has lost his youngest child, a baby 20 months old.

Mr. John Thorpe intends bleaching the tops of Russia turnips, which are considered finer than sea kale, for a novelty next winter, and will bring these in market about Christmas.

The report of the treasurer of the New York Florists' Club, Mr. Cowan, read at the September meeting, shows a balance of \$856.76 in the treasury. A motion was carried to give a dinner to members.

Thomas H. Spalding, Esq., president of the New York Hort. Society, has returned from Europe.

A large combination auction sale of palms and other ornamental plants the 18th ult., brought out but little interest and poor prices.

It is very dull in the seed stores at present. New catalogues are about completed. I have been privileged to see some of the covers to these books. They are very elegant and artistic.

Daily Record of Work Done at the Lincoln Park Greenhouses, Chicago, 1887.

Oct. 1—Tem. morning 54°, noon 59°, evening 63°. Wind W. Carried primulas, cinerarias, etc. from frame yard to houses. Repotted part of cinerarias into 3 inch pots and some out of pans into 2 inch pots.

2—Tem. 64, 72, 65. SW. Sunday.

3—Tem. 44, 60, 50. NW. to W. Removed offsets from echeverias, cleaned them and placed in sand to root. Continued carrying plants from frame yard to houses.

4—Tem. 44, 60, 50. NW. Wheeled sand and tan bark out of frames in order to get at the manure. Continued propagating echeveria offsets. Pricked in

pans seedling calceolarias. Repotted winter begonias.

5—Tem. 40, 56, 54 NW. to SW. Same as yesterday.

6—Tem. 54, 66, 64 SW. to E. Same as yesterday and removed lath shading from No. 1.

7—Tem. 64, 82, 75. SE. to S. Continued propagating echeverias from offsets, also glazing and arranged No. 1. Continued wheeling sand and tan bark from frames and placing in piles.

8—Tem. 67, 73, 68. S. Same as yesterday.

9—Tem. 65, 72, 67. W. Sunday.

10—Tem. 54, 58, 48. N. to NW. Took cuttings from another lot of geraniums. Lifted vincas which were planted outdoors, potted and placed them in No. 7. Commenced potting stock geraniums for vases, etc.

11—Tem. 44 54, 46. NW. Continued potting stock geraniums, also Begonia semperflorens rosea, etc. Potted from outside Achyranthus Lindeni and metallica. Commenced carting manure out of frames.

12—Tem. 34, 54, 50. NW. to SW. Same as yesterday.

13—Tem. 41, 54, 50. W. to NW. Cleaned up most of the fancy beds outside for the season. Potted for stock Mt. of Snow geraniums. Gathered seed of Verbena venosa and portulaca.

14—Tem. 36, 51, 45. N. Potted Mt. of Snow geraniums, fuchsias, thymus and vincas. Continued propagating echeverias from offsets. Cut down caladiums and dahlias and took roots inside.

15—Tem. 41, 57, 53. S. Potted and plunged in frame 300 hyacinth bulbs. Commenced spading tulip beds. Took in side remainder of caladium and canna roots.

KETTEN BROTHERS, Rose Growers.
LUXEMBURG, (Europe.)

October Floral Fashions.

The colors of all floral designs are still very gorgeous, but the inclination is to return to the old loves, the pink and yellow tints. American Beauty and La France roses are now more used than any other. Orchids are in lively demand for rich designs. During the summer when choice flowers were so scarce orchids were introduced into all expensive pieces. Growers are putting them down in price so that they will probably enter in more fully to all the fine floral work. Lily of the valley is very popular and in baskets suitable in shape for this flower, it is much used with a bordering of adiantums.

A number of large weddings are on the tapis. The room decoration for these will consist mainly of autumn leaves, but for the large effect where the nuptial pair stand Klunder arranges a new design. It is very elegant in effect. A frame covered with adiantums is placed across the mirror arch or wherever the chief effect is to be and in a high position a bridal wreath is pendant. This is composed of white flowers, usually roses, orchids and lily of the valley. Attached to this wreath is a bridal veil which spreads out gracefully over the ferns showing here and there the background of greenery. This veil is formed of slender silver wire upon which small white blossoms are fastened. Each side of the green frame are palms and other fine foliage plants.

There is an effort to introduce logs of agatized wood, such as a leading jeweler has brought from Arizona. This is very curious and beautiful, showing many colors to the heart of the tree. The logs come in many sizes and are quite expensive. They will only be used when there is a carte blanche order.

Autumn leaves are made into lam-brequins for the windows and into large shades and fans for the fire-places. The fan-shaped leaves of the maiden hair tree are used in designs to cover fire-places and yellow roses to match this lively color when it throws off its green, are bedded on mantel-pieces in the golden tipped variety of lycopodium.

In table ornamentation for dinners the newest arrangement is an imported design of plate glass and white willow. A large oval of plate glass is surrounded by a white willow gutter which holds a pan. This is filled with adiantum plants which reflect very handsomely in the glass beneath. In the center of the glass oval there is a place for a crystal or silver vase in which long-stemmed roses are put. The roses are distributed as favors after the dinner. Designs for favors will be used more or less, but in certain circles a single rose is presented. Several of the new gilded straw vase baskets are used for center pieces on the table. The one pictured that is filled with La France

roses is now being used frequently, filled with *Hydrangea paniculata grandiflora* with a fringing over the edge of the basket of variegated euphorbia. Vines and loose flowers have disappeared from the table envelopments.

Bridal bouquets are made of lily of the valley with an orchid center in the same shape as lately described. The orchids are not always white. Bridesmaids' bouquets are made almost entirely of La France roses. There is no ribbon used either on brides' or bridesmaids' bunches.

Hand bouquets for coaching parties are formed of Russian violets and heliotrope, a fragrant combination. They are finished at the edge with ivy leaves and are quite small. It is not likely that large hand bunches will be revived this winter. Corsage bunches are not worn by ladies on driving parties. They carry a small bunch of flowers in the hand instead. Men wear large boutonnières on these occasions however. The boutonniere for full dress is very small. A few violets being the rule.

Florists are kept quite busy decorating houses for the return of tourists. The main corridor of the house is trimmed with foliage and groups of plants and usually the dining-room. Simple bouquets of flowers are placed in the drawing-room and chambers, but no especial decoration is put up in the parlor unless there is to be a gathering of friends. Floral gifts for engagements are very elaborate, the baskets gotten up to be filled with flowers for these presents are beautiful. These are elaborately gilded, silvered and bronzed. They are very prettily trimmed with ribbon. Pictures of these will appear shortly. Most of them are made to accommodate long-stemmed flowers and as the season advances they will be filled with the hardy shrub bloom that growers have promised. They are all designs to be used as scrap baskets, or sewing baskets after the flowers are faded.

Nothing particularly new appears in the way of funeral work. A great deal of ribbon is used on all pieces and it is quite fashionable to have the wide satin ribbon scarfs stamped at the jeweler's in gold letters with some appropriate motto. For the funeral of the late Lester Wallace a broken column five feet high made up by McConnell had a wide white satin scarf bound around the shaft which was very handsomely inscribed. The white caskets so much in use for those who die young are exquisitely trimmed with pink flowers. An edging is made inside of these caskets of pink rosebuds and the inside of the casket cover is entirely bedded with roses where this is left open at the funeral. Bright flowers are not placed on the caskets of old people. Palm leaves or a wreath of green is all that is considered suitable.

New York. FANNIE A. BENSON.

A Novel Funeral Design.

The friends of an old gentleman, lately deceased, desired something different from the usual funeral offering, and the thought came to their florist that a pillow of satin, handsomely studded with white roses, would be a chaste and appropriate design.

A thirty-inch pillow frame was covered with rich white satin, both underneath and over, with the edge outlined by heavy silk and chenille cord, forming on each corner a triple loop, from which hung handsome silk and chenille balls. Printed in black and gold on the center of the pillow were the words, "Resting in peace, amidst flowers, you will ever live in the memory of your friends." This inscription was surrounded by a broken wreath of ivy, whilst on each corner was festooned a handsome bunch of Niphetos roses. Here and there over the pillow single choice buds were fastened by small bows of ribbon. The wire stard of the pillow was gilded and wound with heavy chenille cord, and on the back of the frame was fastened a large flat sheaf of wheat, caught up by a spray of white roses.

The effect of the design was chaste and elegant in the extreme, and reflected much credit on the Floral Exchange, of Philadelphia, who executed it. C.

The Pansy.

Pansies seem to have well-founded claims to become the American national flower. First, they are the favorite flower of the first lady of the land, and I am quite certain with the ladies in general. Pansies are and always have been great favorites; and then, those noble ladies which fight the gallant battle of the pansy societies, with their thousands of young American soldiers all over this great country will all and every one be loyal to the flag they have chosen. Circumstances create such as a national flower, and are not those most important ones? And then, which other flower can do what pansies do:

"I know they can't talk,
"Though they sometimes look like they wink,
But I tell you this for a secret,
I really believe they think."

O. R. K.

The National Flower.

This question has stirred up considerable comment. The *Camp News* of Philadelphia, the organ of the Patriotic Order Sons of America tells its readers of the action taken at the New York convention and adds: "To the P. O. S. of A., being distinctively American, we recommend that they take action upon this subject, and convey such action to the Florists' Convention committee."

The Seed Trade.

EMERALD GEM musk melon is exquisite in taste.

W. S. PENFIELD seed and implement dealer of Detroit, is dead.

CHILD'S CELESTIAL PEPPER is certainly most productive and beautiful.

IT IS ASSERTED that Mr. Burpee is testing 3,500 samples on his trial ground at Doylestown.

HENDERSON'S green and gold water melon is one of the most taking novelties of this year's introduction.

JOHN GARDINER & Co., (the Philadelphia brewers) will embark in the mailing business on a grand scale.

MR CHAS. BATES, representing Vil-morin-Audrieux & Co., seedsmen, of Paris and London, was in Chicago September 22.

Prospects for vine seeds, Nebraska grown, are reported bad.

The A. B. Cleveland Co. report heavy pea orders from England.

English houses are buying all the wrinkled peas they can get.

D. M. Ferry & Co. shipped 1,100 bushels extra early peas to France recently.

B. K. Bliss is now in Europe and is no longer connected with W. W. Rawson & Co.

Crossman Bros., of Rochester, will probably increase their wholesale facilities the coming season.

The reduction of postage will probably result in offering all seeds free by mail in the retail lists for 1889.

John A. Gardiner & Co., seedsmen, have begun business at 21 North Thirtieth street, Philadelphia.

The Hort. Art Journal supplement contains a photo portrait of President Haskell of the Seed Trade Association.

The new bush Lima bean shown at the florists' convention at New York by Messrs. Henderson & Co., should have a large sale.

The crop of retail fall bulb catalogues will be much finer than usual this fall. Should this double cropping of the retail buyers be encouraged.

TORONTO, ONT.—Steele Bros. & Co. have purchased the seed business of W. H. Marcon, Niagara Falls. The amalgamated business will be carried on under the name of The Steele Bros Co, limited, in this city. They have doubled the capacity of their premises

Catalogues Received.

Wm. C. Wilson, Astoria, N. Y., plants; John Kready, Mt. Joy, Pa., grapes; Hiram Sibley & Co., Rochester, N. Y., seeds; Richardson & Boynton, Chicago, the "Perfect" hot water heater; Fred. W. Kelsey, New York, nursery stock; F. W. Ritter, Jr., Dayton, O., bulbs and seeds; Frank Whitnall & Co., Milwaukee, Wis., bulbs and plants; Ketten Bros., Luxemburg, Europe, roses; John C. Teas, Carthage, Mo., nursery stock; W. P. Simmons & Co., Geneva, O., plants; L. Green & Son, Perry, O., nursery stock; Julius Jugl, Brooklyn, N. Y., hose coupler; Robt J Halliday, Baltimore, bulbs, seeds and plants; P. J. Berckmans, Augusta, Ga., nursery stock; R. & J. Farquhar, & Co., Boston, bulbs and seeds; B. B. Chandler, Hyde Park, Mass., glaziers' points; R. Maitre, New Orleans, La., bulbs and seeds; Parker & Wood, Boston, Mass., bulbs, seeds and plants; Jno. R. & A. Murdoch, Pittsburg, Pa., trees, plants and bulbs; C. J. Alberts, Boskoop, Holland, plants, trees and shrubs; H. A. Dreer, Philadelphia, bulbs, seeds and plants; James King, Chicago, bulbs, seeds and supplies; E. Bonner & Co., Xenia, O., plants; Michel Plant & Seed Co., St. Louis, bulbs and supplies.

GARDEN AND FOREST for September 19 contains an excellent engraving, from a photograph of Pseudo phenix Sargentii, a palm discovered on Long's Key, Florida, in 1886.

A BLANC'S third supplement to his catalogue of electrotypes is received. It is elegantly printed and contains many new engravings. We may here state that the chrysanthemum cuts which appear in this issue were loaned to us by Mr. Blanc.

THE J. G. & A. ESLER CO. have several seedling carnations of great promise, hybrids of some of the best varieties grown. They think of naming one of them "The Pirate," in honor of Captain Lynch.

ORANGE JUDD, for the last four years editor of the *Prairie Farmer*, is now the editor of a new weekly agricultural publication to be known as the *Orange Judd Farmer*, published at Chicago.

SEED OF EVENING GLORY.

(White seeded var.) i. e. Moonflower. Pink Moonflower is a novelty not yet offered the trade. Eulalia Jap. var. and Zebрина.

MRS. J. S. R. THOMSON, Spartanburg, S. C.

CUT FERNS.

NEW CROP 1888.

NOW READY. Used for Bouquet Work, filling Flower Baskets, Decorating Altars, &c., and are preferred by many to smilax.

\$1.50 per thousand Ferns.

BOUQUET GREEN. \$2.00 per bbl. (30 lbs.) or \$6.00 per 100 lbs. Season commences Oct. 1st for holiday trade.

SPHAGNUM MOSS—Long clean fibre, dry or green, \$1.00 per bbl or six bbls. for \$5.00. Sample or trial sacks containing 3 bushels of Moss, dry, very light, designed for express shipments, \$1.00 per sack.

L. B. BRAGUE, Hinsdale, Mass.

Mention American Florist.

ANNUAL REPORT OF THE FLORISTS' HAIL ASSOCIATION.

The Florists' Hail Association was organized in the State of New Jersey, June 1, 1887.

On the 25th day of August, 1888 the books of the Secretary calls for insurance upon 811,951 square feet of glass, of which 441,044 square feet is double thick, and 370,907 square feet single-thick. Of this, 327,276 square feet is located east of the Alleghenies, being in the States of New Hampshire, Massachusetts, Connecticut, New York, New Jersey, Pennsylvania and Delaware. 484,675 square feet is west of the Alleghenies, being in the States of Ohio, Kentucky, Indiana, Illinois, Michigan, Wisconsin, Arkansas, Missouri, West Virginia, Minnesota, Colorado, and Kansas. Since the organization of the Association up to the present time the Treasurer has paid two losses. That of Albert M. Herr of Lancaster, Pa., on July 6, 1887, and of Frederick Bills, of Davenport, Iowa, on June 7, 1888. Mr Herr's loss was 905 square feet of single-thick glass, for which the Association paid him \$45.25. Mr Bills' loss was 456 square feet of double-thick glass, for which the Association paid him \$31.92. The total amount of membership fee received has been \$489.43, of which sum \$73.60 has been refunded to members who advanced money to organize the Association, which leaves \$415.83 membership fee on hand. The total amount of assessment fund received has been \$566.77. Of this \$77.17 has been paid for losses.

After fourteen months of practical working the Directors have no hesitation in recommending a membership in the Florists' Hail Association as an investment which every florist should make. As to the frequency of assessments it is still impossible to form any definite conclusion from the fact that during the whole of its existence no assessment has been needed. Your Secretary also believes the Association has sustained a fair proportion of the loss by hail, since its organization, based on a ratio of the insured and uninsured greenhouse structures of the country, and it is to be regretted that the florists of the United States have not more generally availed themselves of the benefits of an association, the success of the practical workings of which has exceeded the most sanguine anticipations of its projectors.

In addition I have been requested, as far as I could, to give localities where hail has fallen during the past six months. Hail may have fallen in many more places than here enumerated, but if reports are correct, the following localities have suffered since the 1st of April last: Philadelphia, Pa.; Davenport, Ia.; Little Falls, N. Y.; Scranton, Pa.; Albany, N. Y.; Baltimore, Md.; between Geneva and Lyons, N. Y.; Glee Cove, N. Y.; Elgin, Ill.; Marlboro, Mass.; St. Louis, Mo.; Wadsworth, O.; Lockport, N. Y., and Hackensack, N. J. In connection with the latter storm which occurred a few weeks ago, I will relate an incident: Last winter I visited Mr. Bonhomme the noted grower of strawberries under glass. I urged him to insure his glass, but he replied that hail storms never visited that section of the country. Here is a moral for those who own glass structures where it never hails.

JOHN G. ESLER, Secretary.

TREASURER'S REPORT OF THE FLORISTS' HAIL ASSOCIATION.

AUGUST 16, 1888.

Gas Tar.

I noticed an inquiry in the September FLORIST under the above title and would say: I have used gas tar for the past twenty years, not only on greenhouse gutters but on the benches and other parts exposed to dampness as well, and find it a great preservative of the wood. For gutters I have found nothing better for making them tight. My method of application is to heat it over a very gentle fire and apply with a paint brush while warm. The heating facilitates the work, as it spreads and penetrates the wood more readily, besides forming a hard and glossy coat when cold. Care should be observed not to fill the vessel too full, as it is liable to foam and rise over the side and communicate with the fire. I give my gutters a coat once a year, generally in August, as a warm still day is to be preferred.

While on this subject it occurs to me that possibly some of your many readers might be glad to know that crude petroleum is also a great preserver of wood. I have found it invaluable for greenhouse stages, etc., as a prime coat for all wood-work where exposed to the weather. It prevents warping and checking and at the same time repels water. I consider it just so much lead and oil saved. If followed with a coat of paint it remains on the surface and forms a solid body. Buildings treated in this way will suffer no harm for several years without other paint.

J. G. BURROWS.

Fishkill, N. Y.

THE FALL SHOW of the Pennsylvania Hort. Society occurs at Philadelphia October 2 to 5 inclusive.

GERMAN BULBS

J. HORACE McFARLAND, Harrisburg, Pa.

Washington.

A part of this city had experience with a young cyclone September 16. At the botanic gardens serious damage was done.

The cyclone came from the southwest and swept over the garden in a diagonal direction toward the northeast. At the southwest corner, just outside the garden several large shade trees were uprooted. A section of the iron fence was thrown down, and the storm, passing over the brick house used for offices, struck the dome of the main conservatory. It tore off the top, which was of iron, capped with asbestos, being the flue through which smoke escaped. The iron framework was torn to pieces and the fragments scattered to the earth. Whole tiers of the ribbed or fluted glass covering the dome were destroyed. The contents of the conservatory escaped serious injury. One or two of the palms suffered slight disfigurement from pieces of broken glass cutting the foliage, but no harm was done to the trunks. A section of tin roofing lifted from a house outside the garden near the southwest corner was carried entirely over the conservatories and deposited on the ground near the main east and west walk.

The Garfield memorial tree, being an acacia in the south of the main conservatory and between it and the smaller hothouses, was laid flat. A few steps further south and on the border of the walk fronting the row of hothouses the Garland memorial tree, and elm, was split clear down the trunk. On the north side of the main conservatory a huckeye, taken seventeen years ago from the grounds of the late Hon. Thos. A. Hendricks, and known as the Hendricks memorial tree, was thrown down with such violence as to tear the roots from the trunk. The Garfield tree was planted as a memorial of the late President, and the Garland tree was planted by the present Attorney-General. All three are destroyed.

Several sashes were lifted from the smaller greenhouses, and, carried over the main conservatory, were lodged in trees. One of these was recovered from the topmost limbs of a tree, with only half a dozen of the panes of glass broken. Some of the largest trees in the garden, among them a black walnut that had stood for years, were uprooted. On the north side of the large conservatory a large tree was lifted bodily from the earth and laid across the walk ten feet from where it had stood. But the power of the cyclone was most forcibly shown by the removal of that portion of the main conservatory between the rotunda and the east wing a distance of 12 inches out of plumb. The entire frame-work of the structure is of iron, and hence could not be torn about, but it was moved from its base northward at least a foot. A number of the palms in the grounds were overturned, but it is believed all but one of them can be saved. It is estimated that the damage to the conservatory is about \$1,000; that it will cost that much to make repairs. But as there is an appropriation of \$5,000 in the pending sundry civil bill, which it is believed will be passed in a day or two, for the garden, the work of repairs will be carried forward as rapidly as possible.

PANSY PLANTS,

from first class seed, ready for immediate delivery, 75 cents per 100, \$5.00 per 1000.

Mention American Florist.

NEW DOUBLE PETUNIA DAISY DEAN

In offering to the trade this new variety of double Petunia, I feel sure that I am sending out a real acquisition to this deservedly popular class of plants. Trial is the test of merit, and I will simply state that having sold it in my retail trade for the last two years, side by side with other varieties, although held at fully 25 per cent. higher price than the general collection, I sold more of this kind than of all others combined. It has the following

THREE STRONG POINTS IN ITS FAVOR.

1st. **ITS COLOR** being a soft shade of rich lavender pink, free from the magenta color so objectionable to many. It always attracts the attention of customers, many having said to me they never liked Petunias till they saw this variety.

2nd. **ITS HABIT**, dwarf, short jointed, and bushy, making a model pot plant for the retail trade.

3rd. **ITS PROFUSION OF BLOOM**. Equaled by few if any varieties in the market.

These combined merits make it a plant that no one who has a retail plant trade can afford to do without it. And to give all a chance to possess it for next spring's trade, I have put the price so low that all may buy now and raise their own plants for spring. Orders booked now and filled in rotation as soon as plants are well established, beginning about October 15th.

PRICE, by mail, \$1.50 per dozen; by express, \$1.25 per dozen, \$10.00 per hundred. All orders must be accompanied by cash, and no order accepted for less than one dozen.

I ALSO OFFER

HUGHES' SOLUBLE FIR TREE OIL.

FLORISTS AND NURSERYMEN SHOULD
NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectually all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants: such as ferns, etc. If used as directed. Used as a WASH it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

Dog fanciers should not be without it! It makes a silky coat and produces healthy skin action; kills fleas, and is excellent for washing dogs.

Housewives should not be without it! Used with ordinary household soap it is an effectual DISINFECTANT, BLEACHER AND CLEANER OF FABRICS. It kills insect life on man, animal, or plant, without injury to the skin, wherever parasites may appear.

Put up in 1 gallon tins, \$3.25; Full directions & trade Put up in 1 quart tins, \$1.00; mark on each package.

Hail Notes.

Occasional dashes of hail in the vicinity of New York city is teaching some of the incredulous florists great respect for the Florists' Hail Association. Flatbush was treated to a lively sprinkle on August 28 that broke several thousand lights of glass. Short Hills, N. J., got a round on August 31, while at Saddle River, N. J., a lively little dash of small hail fell about two miles north of the secretary's home, and extended across the line into New York state. This latter storm may be looked upon as an official greeting.

The secretary of the Florists' Hail Association is desirous of presenting to the next meeting of the association and the Society of American Florists full statistics of points at which hail has fallen for the year. Florists, whether members of the association or not, will confer a favor by notifying John G. Esler, Saddle River, N. J., of the time and place where hail storms have or may occur.

A MOST EXCELLENT PICTURE OF THE DELEGATES TO THE NEW YORK MEETING OF THE SOCIETY OF AMERICAN FLORISTS, TAKEN AT IONA ISLAND, N. Y., AUG. 24, 1888. SIZE, 15 x 20. THIS IS THE BEST PICTURE OF THE KIND YET TAKEN. PRICE, \$1.00 BY MAIL PREPAID.

THE TRUE BERMUDA EASTER LILY.

HEADQUARTERS FOR THE TRUE BERMUDA EASTER LILY

(Lilium Harrisii.)

We are probably the largest growers and dealers of this famous lily in the world, our acreage in Bermuda being double that of all other growers combined. The bulbs we offer are invariably larger, stronger and heavier than those usually sold, for the reason that no expense is spared in manuring and cultivating the fields, experience having shown us that bulbs so grown are greatly superior to bulbs grown on impoverished and unfertilized land year after year as is the general practice.

THE TRUE BERMUDA EASTER LILY

Is one of the grandest acquisitions to our list of forcing bulbs. Its popularity and sales have increased annually two fold—and deservedly—for it can always be depended upon to yield an abundant and profitable crop of flowers.

PRICES OF THE TRUE BERMUDA EASTER LILY BULBS:

	Per 100	Per 1000
Extra Large Bulbs (averaging 7 to 9 in. in circum.)	\$15.00	\$140.00
First Size Bulbs (averaging 5 to 7 in. in circum.)	8.50	75 00
Second Size Bulbs (averaging 3 to 5 in. in circum.)	7 00	60 00

MILDEW.

An Interesting Inquiry, and an Answer thereto.

MR. BENJ. HAMMOND,

SING SING, N. Y., Sept. 19, 1888.

DEAR SIR:—I wish to enquire if your "GRAPE DUST" has ever been experimented with as a preventive of mildew on roses in greenhouses? This mildew is perhaps the most troublesome pest the rose-grower has to contend with, and sulphur is about the best remedy we know of at present. Great care must be observed in the application of any powerful remedy on account of the very tender foliage of the rose. If you think this preparation of yours would be more effective than sulphur in destroying mildew on roses under glass, and would not injure the foliage, I should like to give it a trial. Please let me know what you think about it.

Yours very respectfully,

JOHN HOAG.

EFFECT OF USING "GRAPE DUST" ON MILDEW. IN LARGE GREENHOUSES.

NEWBURGH, N. Y., Oct., 25, 1887.
 MR. HAMMOND, DEAR SIR:—I must thank you for the prompt delivery of the keg of "GRAPE DUST" to Mr. Wm. C. Wilson. I was at Mr. Wilson's place, Astoria, L. I., the other day, so I recommended your "GRAPE DUST," and he ordered me to send him a hundred pound keg for trial. If it was not good I should not have recommended it.

Now, in regards to your "GRAPE DUST" I must say that when I first heard of it I had but little faith in it, because I had tried all the remedies for Mildew I had ever heard of, but they were of little value. It seems that my location favors Mildew especially. When other florists are but little troubled, my houses are generally well covered with the Mildew, so when I sent for the first keg of "GRAPE DUST" my roses were almost worthless, but since using the "GRAPE DUST" my roses are the "picture of health." There is not a vestige of Mildew to be seen on my place, and my roses fetch double the price, besides I have saved a month of firing, which I used to be compelled to do to kill Mildew.

Yours respectfully,

F. J. A. SCHAEFER, Florist.

THE PAST YEAR "GRAPE DUST" HAS PROVED INVALUABLE AS A FUNGUSCIDE.

To better introduce, we will send samples free if applicants will pay postage or expressage.

SOLD BY THE SEEDSMEN OF AMERICA.

Boilers Again.

We would like to ask W. W. Coles what would have become of his wrought-iron boiler if the water had got out of it, and then had cold water turned into it the same as the cast iron boiler he writes about in last issue of the FLORIST. It does not look reasonable to condemn a boiler because the piping was not as it should be. There are a great many cast-iron boilers in use, and they are giving, in most cases, the best of satisfaction; we are using them. We pipe overhead and are not troubled as much with red spider as when we used hot water under benches. Have taken out all our hot water boilers and pipes and put in steam, we find a saving in fuel and time and get better results.

W. W. GREENE SON & SAYLES,
Watertown, N. Y.

MODERN GREENHOUSE HEATING.—Under this title the Herendeen Manufacturing Co., of Geneva, N. Y., the manufacturers of the Furman steam boiler, publish a neat pamphlet. It presents arguments in favor of steam over hot water for greenhouse heating, with directions for laying pipe, etc.

THE FLORAL HOME is a new monthly devoted to floriculture, published at St. Louis and edited by A. A. Sherman. Volume 1, No. 1 is under date of September, 1888.

"15 YEARS' EXPERIENCE. THE GURNEY SAVES 33 1/4 PER CENT IN FUEL."

Letter from Thomas Gray, of Fitchburg, Mass.,

In reference to

GURNEY HOT-WATER HEATER.

FITCHBURG, MASS., April 13, 1883.
Dear Sirs:—In answer to yours, asking my opinion of the Gurney Hot Water Heater which you sold me, would say that I have had fifteen years' experience in heating hot houses by water, and must say the Gurney Heater purchased of you has proved itself a wonder, both in power and economy, using one-third less fuel to get same results than any heater I have ever used. The brick-lined pot I consider a special feature, as it renders combustion equal throughout the entire pot.

Yours truly,

THOMAS GRAY, Florist.

ESPECIALLY ADAPTED FOR WARMING GREENHOUSES.

Gives a most uniform heat night and day. Can be run with less attention, and a SAVING of fully 20 to 25 Per Cent, in Fuel over any other method. Burns HARD or SOFT COAL. Endorsed by leading florists. Send for full Illustrated Catalogue, showing how to pipe and heat a house by steam.

Address HERENDEN MANUFACTURING CO., GENEVA, N.Y.

"Perfect"

(Trade Mark)

Hot-Water Heater.

THE MOST POWERFUL HOT-WATER BOILER EVER CONSTRUCTED.

These Heaters contain more features for saving fuel and labor, and are better adapted for heating Conservatories, Greenhouses, Dwellings, Offices, Schools and Public Buildings than any other makes of Hot-Water Heaters. By reason of their enormous heating capacity and increased square feet of boiler surface, and positive circulation, they are the only rapid circulating Hot-Water Heaters made. At a test made the 19th of January, 1888, at the works of the A. A. Griffing Iron Co., Jersey City, N. J., (manufacturers of the BUNDY Radiators)—where all the leading makes of Hot-Water Heaters have been tested—more power was developed, with less fuel, than any heater ever tested there.

Long Island Notes.

BY WM. FALCONER.

THE WEEPING RUSSIAN MULBERRY.—I am down on mulberries. I don't like the trees and I don't like the fruit. But Andrew S. Fuller was here the other day and he assured me that this Weeping Russian is a mighty fine thing. And as Mr. Fuller has it himself and is mighty good authority, I've decided to get one.

EUONYMUS LATIFOLIUS.—During the first fortnight of September this is the most ornamental fruited shrub in cultivation, and this is saying a good deal. With us it is perfectly hardy, and the young plants fruit abundantly. Like most other euonymuses it is a good rooter and a good feeder, but although a strong wooded plant it is not a rank grower.

POPULUS ALBA V. BAILEANA isn't meeting with much favor here, but by shortening in the branches early and in this way giving them increased strength and better furnished bodies, we have got them to become pretty solid silvery pillars.

CORNUS ALBA VAR. SPATHII is a golden variegated leaved dogwood. We had it from Berlin a year ago and it has grown beautifully this summer and retained its highly gilded foliage untarnished. The variegation is very much deeper than in the silvery-variegated *C. Sibirica*. But one season's trial is not enough by which to speak authoritatively. In an editorial in the *Gardeners' Chronicle* a few weeks ago it is called *Cornus sanguinea* var. *Spathii*, but the name that I have retained is the one by which we received it from Spath himself.

HYDRANGEA PANICULATA is the "single" or fertile flowered typical form of the grand fall-blooming shrub now common in our gardens. It is beautiful and desirable. It comes into blossom in July and is done blooming about the time the *grandiflora* variety begins to flower. We must have both.

ROSA RUGOSA AND THE ROSE BUGS.—It is generally believed that rose bugs never prey upon this rose; now this year rose bugs were unprecedentedly numerous here, and they not only completely destroyed the *rugosa* blossoms, but also skeletonised much of their foliage. The white *rugosa* is fruiting as well with us as is the red-flowering one.

CLADRASTIS AMURENSIS now is perfectly leafless. It is always the same, it loses its leaves about the end of August or first of September, but, at the same time, seems to be healthy enough. Of course it blooms late, but its flowers are of a dirty purple color and not at all showy. Good enough as a variety but of very little use as an ornamental tree.

RHODODENDRON VASEYI is well set with flower buds for another season. It flowered beautifully with us last summer and seems perfectly hardy.

THE RECENT wet weather has almost defoliated our golden elder.

YOUNG'S GOLDEN JUNIPER "burns" too much in summer.

WE HAVE two forms of *Dimorphanthus Mandschuricus*, one that bloomed in August and is now laden with black fruit, and one which was in finest bloom about the 10th of September. The cat-birds and robins are as fond of the fruit as they are of elderberries.

FOUR YEARS AGO we set out a hundred seedling hybrid *rhododendrons* along with a lot of grafted plants. The seedlings are now more than double the size of the grafted *rhododendrons*.

AZALEA MOLLIS is very beautiful, somewhat monotonous in color, may be, but unfortunately not absolutely hardy.

AZALEA AMONGA although evergreen is perfectly hardy here, but barely hardy at Boston.

CRATÆGUSES with us are a complete failure on account of fungus. It has also attacked several of the *Pyruses*, notably *P. coronaria*.

IF YOU WANT big flower heads on *Hydrangea paniculata grandiflora*, get very stout young plants to begin with and in spring cut these back to the first joint of the young wood. Young, vigorous plants, stout wood, hard pruning, few shoots at a time and fat living are what give the bunch-heads big enough to fill a peck measure.

OUR GOLDEN PINES.—Two years ago I became very solicitous about our golden pines (*P. Massoniana aurea*) as a resinous exudation seemed to cover their whole bodies more especially the young wood. By way of experiment I made a lath shading and set this up over them, and now they have completely recovered and never looked better than they do to-day. It would appear that the thin shading helped them. These two specimens are

the parents of all the golden pines in cultivation east of California, at least. When Trumpey used to come here with his wagon for "grafts" of these and other things I used to tell him "go help yourself, but don't show me what you take." When I would look around after he had gone, really, I could hardly tell where he had been cutting, so skillfully and rationally would he use his knife.

FILBERTS.—What's the use of talking about soft-shelled hickories, big chestnuts and English walnuts to plant in our little yards, when we may just as well set out a lot of cob and filbert nut trees in a corner of the garden and begin picking nuts in a couple of years afterwards, and every year after continue to pick. We have made such a plantation in a sheltered place thinly shaded, by neighboring trees, and get lots of most excellent nuts.

PARKMAN'S FLOWERING APPLE.—About the 20th of May this was the loveliest plant in bloom in our grounds. It was loaded down with semi-double deep pink to crimson tinted apple blossoms, and the bright crimson pointed unopen buds were prettier than the expanded flowers. And now it is bearing a crop of the tiniest apples, about $\frac{1}{4}$ inch in diameter. Nurserymen catalogue it as *Pyrus Parkmani*, *Pyrus Halleana* and *Malus Halleana*, and the proper botanical name of it is *Pyrus haccata floribunda semiplena*. Well, what are you going to do about it? You all have agreed upon a price, viz., 50 cents a plant; now agree upon a name. Now, nurserymen, don't you think there is some need of you getting together and straightening out the names of these shrubs in like manner, as the florists get together to straighten out the names of their flowers, and the pomologists with their fruits, and do away with duplicate names and prevent piles of trouble and expense to yourselves and annoyance to your customers?

THE OAK-PRUNER (*Stenocorus putator*) is more likely to be the real cause of the mischief referred to by C. B. W. than is "The Seventeen Year Locust." This oak-pruner has been extremely busy this year and hasn't spared any species of oak we have got, providing the plant has attained a tree size, and the woods are full of it. It is particularly noticeable in July and August. It cuts off the ends of the branches two, three or four feet in length, and these occur all over the trees to their topmost pinnacle. Most of these cut-off branchlets drop to the ground at once, but a number of them hang on by a little bit of uncut wood or bark and give the trees a very broken up appearance. If you examine any newly fallen ones of these branches you will find the grub inside a little burrow it had made for itself beside where it had cut off the branch. This is the way it has of reach-

ing the ground; it cuts off the branch and then falls to the ground in the branch.

DUNREITH, IND.—E. Y. Teas has sold his nursery business to A. T. Hudelson.

SAN FRANCISCO.—On September 14 we had a hanging, a circus and a nice little thunder storm all in progress at once. Thunder is a *rara avis* here. The florists' business here seems to be very good, especially in the newer progressive towns. There seems to be no trouble for well posted men to get a situation, but proprietors are more wanted. The nursery business is good everywhere, but pays best when backed by quite a little wad of money. The professions of all kinds are generally full to overflowing.

A GOOD WAY to clean up clumps of *Erianthus Ravennae* when the foliage has died down and become dry, is to touch a match to it and burn it over. No injury will be done to the roots and the cleaning is quick and effectual.

DON'T FORGET that you can print your fall price list in the nurserymen's department and have it circulated to the whole trade for much less than the cost of printing and mailing a list yourself. Try it now.

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

II.

Your cold frames certainly do look very well. You seem to feel instinctively the coming of a cold storm and to know exactly at what point the keen, destructive air must be headed off. Yes, that is a capital idea to protect your glass by coarse wire netting.

No, I hadn't given the matter much thought, but now that you call my attention to the fact, of course I see that your arrangement of plants at different distances from the hot water pipes is very skillful and also your disposition of the flowerless growths which require to be shielded from the sun, is based upon experience gained by close application. But while you take all these wise precautions to shield the valuable stock of your greenhouse I would like to ask whether you are taking equal care of your business in general and whether you know in fact the exact extent and the exact weight of the burdens resting upon it?

Always reminding you that you are mortal, am I? Well, I don't want to see you get intoxicated upon the perfume of your own roses.

Suppose I ask you whether there are any liens on your business.

Liens! What do you mean by liens?

Ah, that's good. I like this inquiring mood better than a contemptuous shrug of the shoulder at the mention of practical every day business matters.

Permit me to ask a few questions: Weren't the masons repairing the brick work of your greenhouses last week? Yes; well, then they have a lien on the whole property.

Didn't you sign a bond for a hundred dollars yesterday to enable your friend Stump to take out letters of administration on his wife's estate? Yes. Well then, that's lien number two on your real and personal estate.

You have two or three small notes outstanding, I believe? Yes. Well then, each one is a lien on your estate.

Pardon me, I think you said you borrowed a hundred dollars a few weeks ago,

but that your old aunt refused to accept any other security than a mere "memorandum" of the transaction. Well, that "mem" is a lien on your worldly possessions.

Excuse me, you owe fifty or seventy-five dollars in the town don't you? Yes? Well, here too, are more "liens" on your estate.

What I mean by a "lien?" Good. That is getting down to hardpan. I wanted you to ask that question. By the term "lien" I mean any "legal hold upon or claim against your property." In plain language it means that you have in possession property which doesn't belong to you. True, the title is in you, but "paper titles" are not always what they purport to be. Therefore, don't get puffed up with vanity when you look over these long roofs of glass which shield so many delicate and costly plants.

Ask yourself: Do I own them? Would not the "liens," which now rest upon my property, were they to be foreclosed or collected, wipe out my whole equity, or interest in it? No, I am not an alarmist. I merely want to impress upon your mind the fact that for every dollar you owe or for which you have obligated yourself, there is a corresponding lien of dollar for dollar upon your estate. True, when you signed that bond for Stump you only created a conditional liability against yourself; but it is a condition which you must always hold yourself in readiness to perform. It may never arise, but you must be ready nevertheless. Therefore it is in reality an absolute lien and if you are a careful and honest business man you must always reckon that hundred dollars as spent when called upon to assume new liabilities.

Suppose we look at this matter for a moment and see how these "liens" may arise. You may give your note, you may accept a draft, you may indorse for a friend, you may make a loan, you may give a due bill, you may insure your life or your property, you may buy a bill of goods on credit, you may execute a bond or become security for some one, you may lease a piece of property, you may give a mortgage on your personal or real property, you may employ mechanics to build or repair, you may guarantee the payment of a note or of rent by some friend, etc.; in each and every case where you enter into such an obligation you create a lien on your estate.

In other words, you manufacture creditors. And in the eye of the law as well as in accordance with the moral code, a man holds his property in trust for his creditors. He may not waste or squander it, he may not use it as if it was absolutely and unconditionally his own.

Now there are still other liens of which I desire to say a word. As you are aware the village, town, county and state are

authorized to collect certain taxes upon your real and personal property. These taxes, the moment they are due, become liens upon your property. A good business man pays his taxes cheerfully and promptly. If you have the cash on hand it's a good investment. Above all don't waste time and energy grumbling about the size of the tax collector's bill. If you want to avoid taxes go up into the mountains or seek out an uninhabited island and live a hermit's or recluse's life. Some few prefer this.

Now the last lien of which I shall speak this morning is the judgment lien. It is quite possible that the most careful business man in the world should have a judgment docketed against him. It attaches immediately to his real property and follows it in most of our states for ten years, or until paid and discharged. It also constitutes a lien on your personal property while the execution is in the sheriff's hands. As you are well aware a judgment lien can only arise when a court has heard and passed judgment against you; or if you don't choose to appear, without hearing you.

As a general rule I would say to you, "Agree with thine adversary quickly," but by this I don't advise you to humiliate yourself or suffer a wrong from any man's hand. If a man begins an action at law against you either go to a good lawyer or to an intelligent business friend of experience and talk the matter over calmly and coolly. If you determine that your adversary is right pay the claim at once, for lawyer though I am, I say keep out of the law except as a last resort.

If the matter goes to trial and you are worsted don't attempt to settle the matter yourself. Let your lawyer do this, for there are certain formalities to be gone through which are unknown to an outsider; and it frequently happens that long after a judgment has been paid in full the lien still rests upon your property. This arises from the grossest carelessness. Make it a rule of your business life never to discharge any kind of a lien which is recorded without taking good care that the proper memorandum of discharge is entered in the office where the lien is on record.

UNCLE BLACKSTONE.

New York Notes and Comments.

The many friends of Mr. William Court, traveler for Messrs. Veitch, will be deeply pained to hear of his sudden death at Chelsea. He was very greatly respected in trade circles here, as in England, and it is a question whether the Chelsea Nurseries will ever replace his loss, as far as the American trade is concerned. Mr. Court was among the many strangers storm-bound in New York during the memorable March blizzard, and was in

ill health at the time, but his death was sudden and unexpected.

How many growers here have made any experiment with Christmas roses? The few who have tried them previously report lack of success, but the United States Nurseries at Short Hills, is about to try flowering some 10,000 plants. The flowers are certainly very attractive; the next thing to do will be to give them a boom. The general public does not seem interested in novelties, however pretty, until they have been well advertised in some way. These hellebores are very popular abroad.

Asparagus plumosus nanus, seems likely to take precedence of *A. tenuissimus* in popular estimation. It is a beautiful pot plant when grown in full bushy form. Mr. Falconer says it is very satisfactory in the house, does not mind a little abuse. He spoke of the pretty effect obtained in a hall, where the feathery strands of this plant were draped over a deer's antlers. It does not propagate any too readily, though many growers increase it by layering.

Nothing is sweeter at this season than the flowers of *Hedychium coronarium*; one or two of the blooms will scent a whole room. It is a plant easily grown, requiring little attention, and certainly not without its value in a general utility greenhouse. It would never pay to grow it for the market, but a grower who is also a florist would find a few of the flowers very handy.

This is the season when the tuberose fiend is everywhere; these flowers are sold by the bushel on the street. They are quite out of date in the flower stores, and yet a great many are grown in New Jersey. Probably there will always be a certain demand for them, even though they have ceased to be a regular florists' flower.

The question to be demonstrated during the next season or two: will the various other shrubs pay when forced as well as lilacs? *Pyrus*, *viburnum*, *cydonia*, *kalmia* and so on can doubtless be forced readily enough if they will bring sufficient price to make it an object. The question with most commercial growers must of necessity be, not so much what they can do, as what will people pay for. There seems an increase of favor in the direction of forced shrubs, as in the case of most novelties. The *viburnum* brought in last winter were very highly commended; a few double cherry and almond were also admired. An easily forced and very attractive thing is the double blackberry; its wreaths of bloom suggest tiny white roses. Certainly, we do want a few novelties in flowers this winter; something a critical public will be willing to pay well for.

That surplus in the treasury of the Florists' Club is something to be proud of; a pleasant little surprise also. It is not very often that a horticultural society is troubled by the same question as the national government—what to do with the surplus.

At the sale of F. Sander's orchids October 2, one of the most interesting plants disposed of was a handsome semi-established specimen of *Sobralia xantholeuca*, which sold for \$48. This is one of the rarest of the species, having very showy yellow flowers. This was the largest price realized by any one plant at this sale. Next to this was a splendid specimen of *Epidendrum prismatocarpum* about two feet across, said to be one of the largest specimens in cultivation. This was sold for \$25. Mr. Kimball paid the same price for a plant of the new

Laelia Eyermanii, which is supposed to be a natural hybrid between *L. majalis* and *L. autumnalis*. It is not only rare, but strikingly handsome according to Prof. Reichenbach's description.

More palms and decorating plants will be sold at auction soon; the last sale was decidedly encouraging. Every grower who has the necessary room is adding to his stock of such stuff; it gives a fine scope for specialties.

Mr. W. C. Wilson has been busy all summer repairing and rebuilding after his experience of the great storm. His stock of ferns was especially crippled by the exposure of that time. A good many are looking anxiously for a good season this winter to repair past losses.

Several growers are now preparing to stun the trade with something unusually fine in the way of cyclamens; each one is ready to swear by his own particular strain. Siebrecht & Wadley showed what they could do in this line last spring and their plants were certainly unusually fine; Messrs. Pitcher and Manda are now preparing to eclipse all previous cyclamens. Theirs is a Scotch strain. The ideal cyclamen for trade purposes must have large, richly-marked leaves and large distinctly colored flowers of good substance, borne on long stems. Short stems or thin texture render the flowers of little value, while the worth of the plant largely depends on the decorative effect of the leaves.

Single dahlias—are they likely to receive as much attention here as abroad? Some of the newer English sorts are strikingly handsome, rich in color and velvety in texture. They show all the most gorgeous reds and crimsons as well as pale yellows. They make a fine show in the autumn garden, and are effective in decoration. Infinitely more handsome than the double form like many other flowers.

It was a little surprising to find that good plants of William Francis Bennett were very scarce this autumn; no one seemed to have any, and there were numerous inquiries for them. It appeared as if less had been propagated than usual.

Cypripedium Harrisonianum—that appears to be even more useful than the old stand-by, *insigne*, for cutting. It is a very handsome flower to begin with, it blooms profusely and keeps on blooming for such a long time. Another good florist's orchid is *Oncidium Jonesianum*, a very distinct and comparatively new species. It has slender round leaves hanging downward; the flowers are in drooping racemes, pale straw color and white with numerous dark blotches. The flowers are lasting like most of its species. Quite a lot of this orchid has been sold at the recent auctions.

Among the chrysanthemum wonders to be shown this autumn in New York will be that wonderful Mrs. Alpheus Hardy, which is described as being more like a white ostrich plume than anything else. It will be remembered as having made its American debut at Boston last year under the care of Mr. Fewkes.

EMILY LOUISE TAPLIN.

Philadelphia.

Judging from present indications there is every probability that the supply of roses around Philadelphia this winter will exceed all previous years.

Mr. W. K. Harris, whose greenhouses are located on Woodland avenue, West Philadelphia, has many thousands of roses in 6-inch pots which are in a very

fine condition. He intends forcing about 2,500 of the *La France*, which rose he says paid him very well last winter. His specialties are, however, chrysanthemums (18,000 in stock), azaleas (some 15,000), and *Pandanus Veitchii*; the latter being the finest I have ever seen and I doubt if their equal is to be found anywhere in the country. Mr. Harris has also an enviable reputation as a grower of primulas, and this year his stock of the same is very fine and will in no way detract from his popularity as a specialist. During this past summer he has erected a sash house and is growing some 1,600 of primulas in same. His plan of ventilating this house is by having the sash fastened at the top and tilting them at the bottom, and by putting a little shade on the glass he is able to get the mean temperature inside of this house lower than outside in the open air and, thus for his purpose (growing primulas), is one of the best houses I have yet seen. In addition to the above Mr. Harris has built another fine improved greenhouse 20 x 100 feet, in which he has planted chrysanthemums, and the old reliable Jack house which proved so valuable to him in past years, has had to go to make room for chrysanthemums, to which plant he proposes to give great attention, thus assuring (barring unforeseen accidents), results which he will no doubt be proud of.

Mr. George Anderson has eleven greenhouses in the neighborhood of Mr. Harris which he has planted all in roses. His *Perles* and *La France* are in good condition and of the latter variety he grows more than any one else in this vicinity. He has not added to his greenhouses this year but is erecting a dwelling house of ten rooms and that he may live long to enjoy it is the wish of his numberless friends.

In close proximity to the above places is that of Mr. J. William Colflesh, which is always a model for neatness and in this respect is worthy the imitation of all florists, nor is this the only lesson to be learned from a visit to his houses as one can not help being impressed with the systematic manner in which all his work is done, even to the smallest details. This has no doubt been one of the means of enabling him to achieve his great success in floriculture. He has added one more house this summer and has a fine lot of asters in 4-inch pots for which at this time of the year there is always a great demand. His chrysanthemums (which are in pots ranging from 4 to 12 inches) are the finest I have ever seen. I have been growing chrysanthemums for the past ten years and it puzzles me to see how Mr. Colflesh has produced such fine healthy plants in 6-inch pots. His specimen plants with which he proposes to contest for the \$100 premium at the coming fall exhibition of the Horticultural Society of Philadelphia are something extraordinary. I have been informed that Mr. John Canere, of Delaware county, has also some very fine chrysanthemums, and indeed, some say they are the best in this vicinity, but as I have not seen them I must withhold at this writing further mention of them.

One of the most interesting places for florists to visit around Philadelphia is the immense establishment of Messrs. Craig & Bro., 49th and Market streets, and with such a collection of roses, palms, ferns, etc., one can surely interest himself for hours and very often pick up information which proves in practice to be almost indispensable. Their roses are in good condition and one large house

is occupied solely by American Beauties and La France. Of their Perles and Bennetts too much can not be said as they are undoubtedly the best around the city. Mr. Robert Craig informs me that his Perles were taken from cuttings of imported stock and he attributes the strong and healthy growth of these roses to this cause, but I for my part think that equally healthy plants can be grown from our own stock, providing as a matter of course, that the cutting is perfectly healthy, and ere long I trust we will have testimony proving the accuracy of my opinion.

From present appearances Messrs. Craig are going to have one of their old time crops of Dukes, as they are most certainly making the foundation for same. Their Mrs. John Laing house (22 x 100 feet) fully substantiates all that has been said in favor of that rose regarding its fine color and free blooming, they however do not expect to bring on the main crop until February. Messrs. Craig are growing two houses of exactly the same dimensions of Papa Gontier; one being planted with young stock and the other with the old plants which were forced last winter and at present one is not able to judge which will produce the best results this coming winter. Princess Beatrice is grown at their places to perfection and as a summer rose it is certainly a good one, but during the winter it does not grow so finely. It is interesting to note the different opinions as to the right name of the so-called "Gem" rose. Mr. Ernest Asmus says it is Marie Van Houtte, Mr. Hill claims that it is Comte de Grivel, Mr. John Thorpe would like to bet his hat that it is one of two old roses, but is not prepared to say which. Mr. Robert Craig has quite a number planted and they are making a gigantic growth, but he will not say what it is except that it is not Marie Van Houtte.

Mr. Craig has evidently great faith in the future of the palm, that is if one is to judge from the immense number he has in stock. The Kentia Belmoreana, K. Australis, K. Forsteriana, K. Macarthurii and Latania Borbonica he has by the thousands. The latter is grown successfully in cold frames as well as in the greenhouse. They have also a number of the rarer ones, such as Areca Sanderianum, A. Geonoma, Jumanii, a very compact growing variety, Verschaffeltia splendida, Phœnicophorium Sechellarium, Livistona rotundifolia, Rhaps humilis, Kentia Canterburyana, Latania glaucophylla and Cycas Neo Caladoniae in 5-inch pots.

Among the newer ferns worthy of special mention are Nephrolepis rufescens tripinnatifida, Adiantum O'Brieni, (a distinct form of A. cuneatum), A. Furgessoni, in general appearance not unlike a Farleyense, but a better grower and one that will multiply freely from seed, giving it advantage over Farleyense from a commercial view, Lomaria gibba platyptera, a magnificent decorative plant when it is grown to a large size, and Adiantum Craigii, originated at their place, not yet sent out. The latter is a variety with exceedingly long graceful fronds quite distinct from cuneatum and makes a fine specimen. It is evidently going to be a valuable acquisition to our list of ferns.

W. W. COLES.

HARTFORD, CONN.—The exhibition of the County Hort. Society September 20, was one of the best in the history of the society.

Philadelphia.

It is the custom of many of the society people to spend September and a part of October at their suburban residences, or at the many fashionable inns a short distance from the city, and during this time to entertain their friends at these places, which causes quite a flutter among the fashionables. Lawn parties, Germans, hops, etc. being in order. For this reason a number of the down town florists report a marked increase in their business, and on several occasions have sent quantities of flowers to both Wissahickon and Devon Inns. These same florists have booked a number of wedding orders for October.

The custom of dry goods merchants decorating their stores for fall and spring

A REMINISCENCE

openings is a good one. If the florists thus employed would charge a legitimate profit for such work they would not only be able to please the merchants, but reflect credit on the whole trade.

Mr. Fosterman, representing Messrs. F. Sander & Co., made arrangements for their first sale of orchids in this city, which took place at Thomas & Sons' auction rooms. They offered 350 lots. Among them were fine plants of Lælia amanda, the recently introduced Lælia Eyermanii and the Oncidium Fostermanianum, which was offered for the first time. The gentlemen interested were well pleased with the results of the sale and promise another for next fall.

Mr. John May and Mr. Rudolph Asmus were in town October 2.

The Peninsula Hort. Society held its first annual exhibition at Wilmington, Del. One point at least is worthy of imitation by other societies, and that is they have a ladies' committee, composed of some of the best known ladies in and about Wilmington. The local papers speak of the exhibition as being a great success, and say "That the floral display at the exhibition has seldom been surpassed for beauty and arrangement." On looking at the schedule we see that the prizes offered for cut flowers are: for best hand and table bouquets, \$2 each; mantel design, marriage bell and display of cut blooms, \$5 each; and on turning to the prizes offered for fruit we find that there are four premiums alone of \$100

each, for the best display of peaches, pears, apples and grapes. The great difference in amount of premiums would hardly bring out the best efforts of the florist.

I made a very hurried visit to Mr. Chas. Ball's place at Holmesburg, and one of the first things that impressed me was the perfect order and neatness that is everywhere before you, from his dwelling house, which is a very pretty bit of architecture, to the coal pit. Under these conditions, with his own experience and assisted by Mr. Taplin, it is needless to say that his plants are well grown, clean and healthy. I will not attempt to say much about ferns and palms as Mr. Ball's valuable essay is so fresh on our minds and will soon be printed in the society's annual report.

I beg leave to differ with your correspondent "C" in regard to the good taste of the "Novel Funeral Design," described in the October 1 issue of the AMERICAN FLORIST.

There has been a very limited demand for orchids in the city during the past year, notwithstanding several florists have tried to push them. This year a number of growers have gone into them, and we predict that this beautiful flower will receive a hearty welcome by a great many dealers who realize the value of giving "tone" to some expensive arrangement of flowers.

The Pennsylvania Hort. Society opened their fifty-ninth exhibition at their hall on the 2nd of October. The amount of credit the society deserves I will leave for some other correspondent to fix. The local papers are very kind in their notices, and few enterprises receive as much gratuitous advertising. This was also the regular meeting night of the Florist club, but as a great many of the members were actively connected with the Horticultural Society it was found necessary to make the meeting as brief as possible. The following officers were elected: Robert Craig, president; Chas. Ball, vice president; Thomas Cartledge, treasurer, and D. D. L. Farson, secretary.

Mr. Sander spent October 1 and 2 in Philadelphia sight seeing. He expressed himself as very much pleased with the city. He of course is very enthusiastic about orchids and says that one of the most important features in growing orchids is that they should have proper rest, the odontoglossum being the one exception.

H. H. BATTLES.

A Reminiscence.

The strictly original design illustrated was an inspiration executed by Mr. John Thorpe for the edification of the S. A. F. while at Iona Island, August 24. This novelty was hugely appreciated by all who had the opportunity of seeing it and we present an illustration as a memento of the occasion.

London Notes.

After a long dreary and wet summer, such as has not been known for years, September has arrived and we are sorry to say, so far has not proved any better than its predecessors, July and August. The continued rain and cloudy skies has worked wonders on the grass, which looks like one field of moss green velvet, but has been far from beneficial to many of the flower crops.

On a recent visit to one of the large flower seed growers here we were informed that many of the crops would be

short owing to the wet and cloudy weather, which would render it most difficult and almost impossible to harvest and dry the seeds. So far there have not been four consecutive clear and sunny days all summer.

In speaking of the London flower trade we think we can safely say that the cut flower designs and decorations are much behind those of the leading florists in the United States. From what we have seen we think the designs are more formal and lack the ease, grace and warmth of color which characterize the American florists productions. In plant decorations there is no doubt but that the English florists and decorators excel, but in cut flower designs they are far behind their French and American cousins.

Maiden Hair fern is largely used here in all cut flower decorations. Now this is all very well in a pot, when shown as a pot plant, but not to be compared with smilax for cut flower designs and decorations, and yet, strange to say, smilax is almost unknown here. Perhaps it is not the fault of the florist, that it is not better known, as the British public is slow to take up new ideas and likes to cling to old ways and fashions. To the best of our knowledge there is not a single commercial florist growing smilax for the London market to-day. That is, growing it in any quantity and growing it as grown for market in America. We doubt very much if thirty yards of it could be bought in Covent Garden Market to-day.

The annual show of the Dahlia Society was held on Friday and Saturday, Sept. 7 and 8, at the Crystal Palace. The flowers were arranged in the central aisle of the main building, in the same manner and place as the roses were exhibited at the rose show.

Some of the best dahlia growers in England, both professional and amateurs, took part, and the show from all points of view was a success. Besides dahlias, some choice specimens of hollyhocks, summer chrysanthemums, begonias, gladioli and hothouse fruit were shown.

A number of new dahlias were exhibited, and where warranted, received certificates from the society. Among those who received certificates were Messrs. Hynes, Williams & Co. of Salisbury, for their new pompon dahlia "Eden," a regular and well shaped flower of a deep maroon color; also for their yellow pompon dahlia "Whisper," and pale crimson pompon dahlia "Fairy Tales."

"Little Ethel," a pompon dahlia of a white color tipped with purple, was one of the finest shown.

Chas. Turner of Slough had a fine collection, and received a certificate for a deep purple shaded to pale rose pompon dahlia called "Rubens." Messrs. Cheal & Son of Crawley, had a fine show of single dahlias, and Messrs. Cannell & Son of Swanley, had a fine show of their varieties, among which the "Charming Bride," of a pink and white color, was noticeable. This firm also exhibited some fine begonias, the yellow and white varieties being particularly fine.

The finest flowers in the show were undoubtedly the group of Comet asters, shown by Mr. Frank Glasscock of Bishop Scottford. These were grown to perfection; each flower being alike as to size and color, and averaging six inches in diameter each.

Messrs. J. Burrell & Co. of Cambridge, won the prize for gladioli with a fine exhibit of 130 different spikes. They also received a certificate for their new gladiolus "Snowdon," a fine large white flower with purple throat. Messrs. Bur-

rell's exhibit of pompon dahlias was also fine, for which they received a first prize. Mr. W. H. Apthorpe of Cambridge, had a fine show of hollyhocks, much the finest we have seen this season; the flowers were perfectly shaped, and the colors distinct and true. Mr. J. T. West of Brentwood, had a new cactus dahlia for which he received a certificate. This is said to be one of the best cactus dahlias yet introduced. He also received a certificate for his new pure white pompon dahlia "Dolly Keith."

On Thursday and Friday of last week the National Chrysanthemum Society held their second show at the Royal Aquarium. The chrysanthemum shows here are extremely popular, and draw together some of the best growers in England. Gladioli, dahlias, lilies and fruit were also exhibited, and many of those mentioned as taking part in the Crystal Palace show, won prizes here. Messrs. Cheal & Son were again to the front with a first prize for twenty-four bunches of single dahlias. Messrs. Hawkins & Bennett received a certificate for their new early blooming variety named "Mrs. Hawkins."

The weather has been quite a treat the last week, bright, clear and warm, with plenty of sun. This may help the seed crop some, but we are afraid it has come too late to do much good.

September 21. T.

The St. Louis Exhibition.

The offer of prizes amounting to \$1,000 by the St. Louis Exposition for floral displays on the 9th and 10th insts, called out a lively competition from St. Louis florists and an excellent show was made.

There were seven entries for "best and most tastefully arranged decoration of greenhouse plants." In this class first prize, \$100, was awarded to the Jordan Floral Co.; second prize, \$75, to the Ellear Floral Co.; third prize, \$50, to Carl Beyer; fourth prize, \$25, to C. Young & Sons. Many excellent decorative plants were shown, but while some were very tastefully arranged, the arrangement of most of the entries lacked grace.

For "best arrangement of cut flowers and plants for a parlor," prizes were awarded as follows: First prize, \$125, Jordan Floral Co.; second, \$100, C. Young & Sons; third, \$75, Wm. Ellison; fourth, \$50, J. Kunz and Carl Beyer, joint exhibit.

Among the features of the Jordan Floral Co.'s exhibit were the excellent quality of the plants used; a mantel banked with roses, while a mantel shelf above held a very elegantly filled basket of roses in the center with a small specimen palm on each side, the pots in white and gilt basket covers and then draped with smilax, the fireplace filled with specimen adiantums and at each side a specimen Pandanus utilis with a large Adiantum Farleyense hiding the pots; all sides of the space were filled with decorative plants very gracefully arranged and several handsomely filled baskets stood on pedestals among them.

C. Young & Sons' arrangement was also very handsome. Among the most attractive features were two handsome panels of laurel bearing in relief a fan and basket of roses respectively, both were of decided merit, as was also a wedding canopy with the top in the shape of a coronet.

The main feature in Wm. Ellison's entry was a table with the cloth worked out in carnations, flowers of varied colors being used to create figures in the cloth; the corners were white and the folds in

the "cloth" there were well executed. Each of the white corners was relieved by a garland of crimson roses. In the center stood a vase of crimson carnations filled with pink roses. A handsome basket of American Beauty roses was also a feature in addition to a very tasteful mantel decoration.

J. W. Kunz and C. Beyer's entry was a wedding decoration of conventional form.

For "best table decoration," Wm. Ellison received first prize, \$75; C. Young & Sons second, \$50; Jordan Floral Co. third, \$25. The center piece in Ellison's decoration consisted of a four-leaved clover of La France roses, and the decorations at the corners were of the same roses gracefully arranged with ferns and tied with ribbon of the same tint as the roses. It was a simple but elegant arrangement. Young & Sons' center piece was of American Beauty roses, ferns and small palms very effectively arranged. Jordan's table was a large round one with a seven pointed star of roses for a center piece.

For "best floral design of any kind," Wm. Ellison received first, \$50; Jordan Floral Co. second, \$25; C. Young & Sons third, \$10.

For "best handle basket" there were four prizes, \$25, \$15, \$10 and \$5, taken by C. Young & Sons, Wm. Ellison, Jordan Floral Co. and J. W. North in the order named. For "best vase-shaped basket" there were three prizes, \$25, \$15 and \$10, awarded to Wm. Ellison, Jordan Floral Co. and J. W. North respectively. For "best bride's bouquet and best bridesmaid's bouquet," four prizes of \$25, \$15, \$10 and \$5, taken by Jordan, Ellison, Young & Sons and North in the order named.

The judging was done on the point system, Messrs. Anthony, Gallagher and Grant, of Chicago, acting as judges. These gentlemen were afterwards dined by the exhibitors at the Mercantile Club.

Scientific Education for Florists.

EDITOR AMERICAN FLORIST:—No one regrets more than the writer the fact that the few remarks he made at the late convention in New York did not convey the thought intended. I was greatly surprised when a friend told me the general impression was that I ridiculed all education in connection with the florist and gardener. Certainly I endeavored to impress upon the minds of all present the necessity of an education, and that science was a result—in fact it is education.

The objectionable part of my remarks in regard to "agricultural chemists," in classing them as "humbugs." I intended to apply only to manufacturing chemists, those who would have us believe that a perfect analysis can be made of the soil and all vegetable products, and that fertilizers can be formulated to supply the necessities of all growing crops. We believe this simply impossible, and that when such pretensions are made "it is with intent to deceive."

We could wish every tiller of the soil, every grower of plants so well educated that there could not be a possible chance of his being deceived by the many relatively valueless varieties of plant food that is constantly being urged upon him. A high type of education is as essential to the florist as to any other business man, and there is no class of men that so thoroughly enjoy the knowledge pertaining to their business as the florist.

I should not have given this matter any notice but for the letter from Mr.

Collier on page 56 of the FLORIST, preferring to leave the matter until there should be a suitable opportunity to express my views at length on the necessity of the scientific education of florists.

Garden City, N. Y. C. L. ALLEN.

Long Island Notes.

BY WM. FALCONER.

THEY ARE FOREIGNERS every one, I mean that national flower committee (page 80). No, not even "a Yankee girl" is native born. Miss Taplin is an English girl.

LOBELIA SUBNUDA is a little gem of a plant whose foliage grows in tiny rosettes of silvery green and olive as pretty as an anemochilus. Suitable for the finest kind of mosaic bedding and easily raised from seed. The plants are very small and should be three months old before set out, but they stand the summer's sun gallantly. Cut off the flowers if you wish to enjoy its pretty foliage which does not rise more than an inch above the ground.

OF THE China Asters sown June 9 all varieties except Triumph have been in good bloom for several weeks, but it has not yet emerged from its rosetted form.

AMONG BLUE flowers Salvia Pitcheri is now one of the brightest and best. Barely hardy, but planted out in summer and lifted and potted in early fall it forms an excellent pot plant, and without any of the grossness peculiar to splendens, rutilans or involucrata. Propagated from seeds or cuttings but not with the same freedom that we do other salvias.

COREOPSIS CORONATA is an annual species very common in gardens. It has large bright yellow flowers on long stems and which are well fitted for cut flowers. But as the crop sown in spring will not endure in good condition till fall, I made a sowing again June 9 to succeed early flowers. These have grown well and been in profuse bloom since, over a month. This together with China asters, zinnias, Meteor marigolds and mignouette is one of the plants we can make a very large show of bloom with in fall and that too at very little expense.

THE GLADIOLUSES I am now (Oct. 4) cutting were planted first week in July. Some planted June 26 are also in good bloom still.

JAPANESE ANEMONES. — Why don't you plant more of them? From the end of August till cut down by frost in October what have you more beautiful among hardy flowers than the white variety? If it isn't quite hardy with you a heavy mulching will save, or better still, lift the roots and winter them in a cold frame. No, it isn't of much use among cut flowers, it will last a day or two pretty well. Isn't this one of the amateur's plants that would give tone to your business? Any one seeing it now in bloom and perfection, and who has not got it already would surely want it.

FLORISTS must eat. When you folks in Chicago drive wheat to \$2 a bushel it is some consolation to know that the Jersey farmers can raise 1,076 bushels of potatoes to the acre. Why, 583 bushels are only an average crop.

SOLANUM JASMINOIDES GRANDIFLORUM is the prettiest vine in our grounds to-day (Oct. 3). Raised from cuttings last spring, planted out end of May and given the support of a trellis, it is now some six or seven feet high, very bushy,

viney and full of large lax heads of pure white really beautiful flowers. They last well as cut flowers. A tender vine, native of South America. One of the easiest of plants to grow and propagate, a capital window plant and a perpetual bloomer.

EULALIA GRASSES have recently become immensely popular and deservedly so. They are now (Oct. 3) in their finest condition, foliage five to seven feet high with flower heads two feet higher still. It is odd but true, the zebraia form is more vigorous than is the plain green-leaved plant, but the ordinary variegated form is less luxuriant than either of the other two. As soon as they are cut down

MUSA SAPIENTUM VITTATA

by frost I cut them over, clear away the straw and mulch about and over them with leaves or litter. Florists complain that if they lift and divide eulalia clumps in fall the young stock invariably perishes. You can not reasonably expect anything else, as the plant is ready to go to rest for the winter you mutilate it and then hope to see it mend and grow at once. Oh no, first let it rest, then lift and break it up and the young divisions will grow well enough.

THE LONDON CORRESPONDENT OF GARDEN AND FOREST writes October 1: "I do not know whether Gladiolus Gandavensis is grown much in America. * * * If they are not they should be." Well, if he had been here August 25 and attended the Florists' party at Queen's he would have found himself surrounded by thirty acres of gladioluses in full bloom. Gladioluses in America? Why, of all places on earth to see gladioluses by the million Long Island is the place. And if we can not satisfy your appetites in Queens county we can send you a few miles further into Suffolk county to Jamesport, where you will find the million repeated. No need of going to England to Kelway's, nor to France to Lemoine's, if you wish to see gladioluses

in quantity. And we grow them in a wholesale sort of way in this country. We don't grow them in rows one to two feet apart and six to ten inches asunder in the row, but our rows are three feet apart and opened five inches wide in the drill and the bulbs planted therein about one to two inches from each other and so as to fill up the whole width of the opened drill. By planting so thick perhaps you think we cannot get as big bulbs as we would did we plant thin. Now, what good loam, a subsoil plow, plenty of New York manure and clean cultivation by horse and hand power, won't produce in the way of fine bulbs can not be approached in Europe.

ARUNDO DONAX is the noblest reed in our grounds. We have a mass of it a rod and a half square. It was nearly killed out last winter, the first time for years that I have known it to be injured in winter. By the middle of June a few shoots appeared above ground, and in order to fill up the bed I had it studded all over with banana and blue gum trees. This was too much for the arundo, it buckled up its strength and grew as I never knew it to grow before upward and outward and now it has choked and destroyed both bananas and blue gums, and by actual measurements the reeds are 17 feet 6 inches high and tasseling out into bloom. It is a native of the south of Europe, but we treat it as a perfectly hardy perennial. Cut it over about the first of November and cart on a few loads of straw litter to spread over the crowns. The variegated form is also hardy with us, but it does not grow as luxuriantly as does the typical green-leaved plant. In English gardening works it is spoken of as growing ten feet high, but last year ours were fully eighteen feet high. This year they are shorter by a few inches because they have had so much branching to do and carry. Propagated by division of the root stocks, also from the sprouts that issue from the joints along the stems when these stems are laid down flat.

Musa Sapientum Vittata.

This elegant banana will probably take a prominent place as a decorative plant for florists. It propagates readily, grows well and can now be obtained at a very reasonable price, while it vies in beauty with the higher priced and tender dieffenbachias.

Dwarf Cannas.

I notice in the AM. FLORIST a mention of dwarf cannas. I once planted a canna seed in a small pot, about 3-inch, and left it there, putting the pot on an upper shelf in the greenhouse. It grew during the winter into a complete little plant, and sent up three or four flower spikes, about sixteen inches high in all, flowering in January and February. The next spring I planted it out, and it grew about six feet high. If the small pot was the cause of the dwarfing, it is easy to get in that way a very pretty house decoration. Boston. T. M. CLARK.

PALMS.—We have some large palms in tubs which are full of roots, but we do not wish to put them in larger tubs for another year. Will some experienced grower kindly tell us what to do with them to keep them in good condition till next summer? Would sphagnum and bone dust placed on the top of the roots do any good, or is there any better preparation? GARDENER.

Some New French Roses.

As in former years I send you a list of the best new roses raised in Lyon and which will be sent out November 1.

A few others will then be sent out for the first time, but I have described only those that I have been able to see in bloom again this month, showing conclusively that they are decidedly *remontant*.

I use the term *remontant* because there are no *perpetual* blooming roses, and also the term *sarmentous* because there are no true climbing roses, nature not having endowed any rose with the necessary organs for climbing. In my opinion it is time that all erroneous and misleading terms should be abolished.

FROM F. DUBREUIL.

President Dutailly. Provence Remontant (Gallica). Strong grower and very hardy; foliage of the specie dark green; flowers medium size, cup shaped, nearly full; flower stems of three to four blooms; color fine dark crimson, slightly tinted purplish brown, lighter in center; very free bloomer, very remarkable as being the first remontant of its class.

Madame Carmen. Tea. Sarmentous. Style of Gloire de Dijon; seedling of Madame Berard; brilliant foliage; flowers solitary, very double, medium size; petals very dense and crumpled; color very light flesh rose, slightly tinted with yellow; very remontant.

FROM ALEXANDRE BERNAIX.

Joseph Metral. Tea. Very vigorous; foliage small and dark; flowers very abundant, sometimes twenty to twenty-five on the same stalk, bright crimson, very full, good size.

Blanche Rebatel. Dwarf Remontant Polyantha. Plant about twelve to eighteen inches; exceedingly free bloomer, flowers of about one inch; bright crimson, slightly striped white, the first of that color in its class, exceedingly pretty.

Madame Cambon. Tea. Foliage small and dark; plant of ordinary size; flowers bright yellowish pink, sometimes half white or totally white on the same stalk; very curious; medium size, semi-double fine buds; free bloomer.

FROM PERNET PERE.

Monsieur Desir. Tea. Sarmentous. Foliage dark; flowers solitary, dark crimson, tinted purplish brown; medium size, nearly full, free bloomer; strong grower.

Souvenir de Joseph Pernet. Hybrid Remontant. Strong grower; dark foliage; flowers large, fine shape, nearly full, very round petals; very brilliant light crimson edged with very dark purple; very free bloomer.

FROM PERNET FILS—DUCHER.

Comte Henri Rignon. Hybrid Tea. Plant rather dwarf and bushy; small dark foliage; flowers solitary, large, fine shape; very light rosy salmon; very free and abundant bloomer, very hardy.

FROM J. B. GUILLOT.

Madame Pierre Guillot. Tea. Strong grower; fine foliage; flowers rather large,

nearly full, fine shape, solitary, yellowish petals shaded white edged vivid pink; new color.

Ernest Metz. Tea. Strong grower; free bloomer; flowers large, very full, fine shape, solitary, fine buds, very tender rose, center vivid cherry.

JEAN SISLEY.

Monplaisir, Lyon, France.

PURITAN AND LAING.—Last May I set a plant of Puritan and one of Mrs. John Laing side by side in the open ground and have watched them closely ever since. Puritan did handsomely until a hot, dry spell set in, after which it didn't amount to much. Mrs. Laing, however, has done well right up to date, it has grown and bloomed freely, its color and exquisite fragrance being the delight of all who have seen it.

Baltimore.

Begonia Rex.

How rarely do we find a well grown specimen of any variety of Begonia Rex in any of the commercial places and how very easy it is for any body to grow them to perfection. Why not grow a few specimen plants during the summer months? And if you cannot dispose of them at a reasonable price before winter sets in, you would have at least plenty of leaves to propagate from, aside from the satisfaction they would give during summer and autumn in brightening up a greenhouse.

A few years ago I had a lot of small plants left over in June, and after a liberal repotting placed them in a little lean to house with a northern aspect and it was astonishing how fast they grew. Keeping the house close and moist, in four or five weeks they needed another repotting and required more room, and as we gave them what they wanted we had the gratification of being able to show a little house full of Begonia Rex in their different varieties, which you do not find very often and the consequences were, that we sold them nearly all before cool weather set in.

I always was in the habit of growing one or two specimen or stock plants of each variety of these plants; generally took young plants in June for that purpose, repotting them whenever they needed it and by September they would be in 10 or 12-inch pans or pots and have made such luxuriant growth as to cover the pots and extend their foliage far beyond the rim. These large pans come in very handy for decorating and may be used five or six times over for such occasions before we cut them down for propagating and by that time will have paid for the trouble of growing them. I have heard many florists say that they experienced rather poor success with this class of plants in their houses, but it is only because the plants do not get what they want—a moist warm atmosphere with a slight shading of the glass. The notion among old gardeners that whoever could grow a good Begonia Rex would be able to grow anything to perfection, is not true in my opinion, for I can grow them well, but there are a great many things I have no luck with, as they call it, instead of saying: things I don't know much about and can not grow.

I suppose most everybody knows that Begonia Rex is propagated from the leaves, either cut in pieces and inserted in sand or by laying the leaves whole on the propagating bed, cutting the ribs in different places and pegging them down;

the young plants springing up from the base of the cuttings, or where the knife was run in the ribs and the same cuttings or leaves may be used over several times after removing the young plants from them. They require a temperature of 50° to 60° in winter to do well, but it is not necessary that they should have a place near the glass, in fact I often set them under the benches when cramped for room during winter, but always have them on the benches again by Easter so as to get them in great demand for urns, lawn vases or veranda, and window boxes. We use ordinary sandy loam and about one third well decayed manure, but most any loose soil will answer. If grown in a shaded house during the summer months the atmosphere should be kept moist by frequently dampening the walks and benches and in hot days the plants also should have liberal syringing, although many good plantmen recommend not to wet the leaves at all. I think that in hot weather they are benefited by plenty of water on them, provided they have porous soil and good drainage. The colors and markings of the leaves will come out more distinct under such treatment as also the foliage will be of a larger size.

The indifferent success some florists have experienced with these plants I attribute to an unsuitable and dry situation, too much direct sunlight and a heavy compact soil. If they would try the reverse I am sure the result would be more favorable.

J. B. KELLER.

Rochester, N. Y.

Greenhouse Climbers for Cut Flower Decorative Purposes.

LAPAGERIAS ROSEA AND ALBA.

For decorative work these beautiful climbers are invaluable, and when grown as I recently saw them with Mr. David Allan, gardener to R. M. Pratt, Esq., Watertown, Mass., they will certainly pay. Mr. Allan's treatment appears simple enough to suit any one who has an abundance of water at command. The plants are placed in side benches, in rough peat and kept deluged with water at the root. Mr. Allan calls them ditch plants, but it must be acknowledged they are very handsome ornaments for any ditch, for they were completely covered with beautiful bloom, some on short stems, others could be cut in clusters, which every decorator who has ever had the good fortune to use them, knows how beautifully they blend with other subjects in general use for such purposes, their beautiful bell-shaped drooping flowers showing well in any kind of light.

Another climber which is invaluable for this work is Bougainvillea glabra. This is also of easy culture. A large plant of it was in full bloom at Messrs. Norton Bros.' greenhouses at Dorchester, Mass., and is very highly esteemed by them for such work. To get the best results from this plant it requires to be planted out in a greenhouse and have plenty of room to grow. When well established it can be had in bloom six to nine months of the year. The period for the largest crop can be regulated by withholding water at the root and judicious pruning. Ordinary greenhouse temperature suits this plant best, as too high a temperature makes it run to wood instead of bloom.

Allamanda Schottii is another favorite, and justly so, with Norton Bros. Its glorious color would commend it to any one and when in addition to this its free-

PANEL DESIGN.

blooming qualities are considered it will the more readily commend itself to the florist. This plant to obtain the best results, requires considerable more warmth than either of the preceding. The same firm have also in their houses *A. nerifolia* but this variety is hardly worth growing in comparison to the first named.

For those who have use for such class of flowers and room to grow them, these plants would well repay them. The pure white of *Lapageria alba*, the beautiful pale red of *rosea*, and the delicate mauve color of the *bougainvillea* all blend and harmonize so well with the bright clear yellow of the *allamanda*, which has in addition a wealth of clear, glossy green foliage that greatly improves the whole, particularly when reflected by gas or electric light at night. But the best green for using with any or all of the above is the light, feathery *Asparagus plumosus*, though in many sections there is a certain antipathy to it, possibly because it is called *asparagus*. Certainly it cannot be because it lacks beauty, grace, or good keeping qualities. One florist calls it *A. plumosus*, dropping all of *asparagus* except the first letter. This, as he remarked to me, took the culinary sound away and his customers thought it elegant. There is

no denying its elegance call it what we may, and in the near future it will be found in the front rank as an evergreen climber.

Summit, N. J.

JOHN N. MAY.

Panel Design.

This design for wall panels is an elegant and imposing piece, and will prove a great assistance to florists who decorate on a grand scale. It represents a spray of flowers and leaves in straw or rush work which is gilded and bronzed. It is one of Ed. Jansen's latest styles, and was festooned with ferns and roses by Alex. McConnell in a wedding arrangement made last week.

F. A. B.

Callas.

Callas are grown by most everybody and everywhere without much trouble. Often we find them even in private houses in a perfect state of health and blooming freely, and it seems unnecessary to write anything on that subject. But as we should aim to accomplish the best possible results with the least labor, a few hints on the treatment may after all do good to many men who are in the habit of growing among other winter

blooming plants a few callas, from which they may or may not get a fair share of flowers.

To begin with, I do not plant my callas out in the open ground as is the general habit among florists, unless I have a lot of small bulbs which I want to grow on. After the house gets too hot for them in June I take the old plants, pots and all, and set them in some convenient place outdoors, where they remain without water until about September 1. If it rains on them occasionally it will not hurt them. Then I shake all the soil from the roots, if there is any left, for they generally have completely dried off, and repot in very rich soil, giving a 6, 7 or 8-inch pot, according to the size of the bulbs, and set them in the same place again outdoors until danger of frost compels me to have them taken in the house. They get a good watering every day and the plants will commence to grow in a short time, many of them showing buds at the end of the month, while if I had planted them out as I did years ago, the roots of my plants would have to be disturbed by lifting and it would take them three or four weeks before they had fairly recovered, besides I save all the extra work of planting out and lifting, shading and syringing, etc. True, the plants from the open ground look stronger and larger at the end of September than the dried off plants do at the same time, but I have flowers on mine when they only have made three or four leaves and the flowers are what we are after.

Another thing to be observed is, always to set your callas together on a bed or bench and they will flower more freely than by mixing them up with other plants, especially if the plants are set middling close together, as most of us are in the habit of doing in winter to save room. I have watched my plants closely for the last five or six years and have had no plant in a 6-inch pot or over from which I did not get at least five good flowers or over in a season, that is from September to the following June. Many plants in 8 or 10-inch pots produced in the same period over a dozen blooms. In some places it is the habit to plant callas in a prepared bed in the house, but the objection I have against this treatment is, that a good share of the flowers produced will be of too large a size to be used conveniently in designs, etc., and that the rank growth of the leaves is not in favor of producing many flowers, while pot plants make only moderate leaf growth and furnish more flowers.

As the season advances and the soil in the pots becomes exhausted I usually repot a lot of the plants into other pots one or two sizes larger and the plants so treated come handy for Easter decoration. I found six or seven weeks about the time required to get them in good salable condition with leaves enough on them to present a decent appearance, if set singly, while those plants left in the original pots and without repotting may not present the healthy appearance nor as luxuriant foliage as the plants which got the extra treat of a little fresh soil, although in my opinion it does not at all affect them as to the number of flowers they produce.

JOHN B. KELLER.

Rochester, N. Y.

MR. W. C. WILSON of Astoria is said to have at least 100,000 *Latania borbonica* in thumb pots. Craig & Bro., Philadelphia, are believed to have the largest stock of salable plants.

Lycaste Skinneri.

For general cut flower purposes this orchid will be found one of the very best and when properly grown will be found a very paying investment. It can be bought comparatively cheap and in large quantities. Plants recently imported will be found the best. If strong healthy pieces are secured in the spring they will quickly establish themselves and make good flowering bulbs the same season. The bulbs will produce all the way from two to thirteen flowers according to the treatment the plants get.

A system of culture which we adopt here with good success, is to use as small pots as possible and these well drained. The potting compost consists of fibry loam, sphagnum moss and rotten leaves chopped fine and in equal parts, with a liberal addition of sand. When the plants are first started the soil need only to be kept moist until the roots have got good headway. After this too much water can scarcely be given them provided they have plenty of air and sunlight, but the leaves must not be scorched. As soon as the growths are so far advanced that the bulbs are seen to be forming, the water is best applied overhead, this being a sure preventive of insect pests, especially the red spider. It is better not to allow the plants to become dry even in winter, as the roots will be found to be active all through the flowering season.

It is not necessary to repot the plants every year, but they may be heavily top-dressed with chopped leaves and moss. Manure water is very beneficial when judiciously applied. The early flowers will appear in December and flowers may be had from this time till late in the spring. The individual flowers will last on the plant about two months and for a very long time in water when cut. Care should be taken in handling the flowers, as they are more easily bruised than many of the popular species. A minimum temperature of 50° with a rise of 10° to 15° during the day in the winter will be found the best. F. GOLDRING.

Kenwood, N. Y.

Hardy Ornamental Shrubs for Florists to Sell.

In last issue we expressed the belief that it would pay florists to plant a sample lot of hardy ornamental shrubs and deal in the same, and we now take pleasure in calling the attention of the trade to a liberal offer on page 123 by one of the most reliable nurseries in the country, to furnish a sample lot of fifty kinds of shrubs most suitable for the purpose for \$10. The list of kinds with descriptions may be found on the page named. Mr. J. R. Trumphy, an acknowledged authority on this class of plants, has marked with an * such as may be suitable for forcing.

As fall is the best time to plant we recommend that those who have decided to give the matter a trial order at once.

Even if you do not sell a single shrub from the lot the investment will be an excellent one, for there are few florists' places that will not be vastly benefitted by the planting of such a lot upon it. But that sales, and many of them, will follow we do not doubt.

OBITUARY.

PLINY WARD REASONER, the senior member of the firm of Reasoner Bros., Manatee, Florida, died September 17, of yellow fever.

He was born in Princeton, Ill., May 6, 1863, came to Florida in 1881, and two years later founded the business since known as the Royal Palm Nurseries.

He was an active worker in the cause of horticulture and wrote for many periodicals. He was the horticultural superintendent at the sub-tropical exposition last year, and Florida commissioner to the Cincinnati exposition.

The business will be continued by the surviving member of the firm, Egbert N. Reasoner, for the following year under the old firm name.

WILLIAM COURT, the genial agent of Veitch's nurseries, London, and who for the past thirteen years has made annual business visits to this country, died at his home at Chelsea, London, on the 17th of last month at the age of 45. Not only was Mr. Court an excellent business man, but also one of the best plantmen, hybridists and propagators in the London nursery business.

The Convention of National Flowers.

"Once upon a time" "a grower and a dealer," while traveling in the tropics in search of orchids, were surprised to see a beautiful rose surpassing anything they had ever seen; the grower said: "This is remarkable to see this rose in the tropics. I believe it is a hybrid tea, and would do well for winter forcing." "Yes," said the dealer, "if you can give us that rose in quantities at Christmas you can get big prices for them. Let us take it home." They were struck speechless by hearing the rose speak: "Gentlemen," it said, "I know from the way that you speak of my family, that you are from America; several of my relatives have been taken there, and have been treated very badly; they say all manner of unkind things about us, always talking about our not being profitable. I beg of you gentlemen not to detain me; I had rather die here in this dreadful climate, than to be taken to America and treated as a great many of my friends have been."

"But where did you come from?" asked the grower. "From England, where I am loved very dearly." "Then why are you so far from home?" "Pardon me, gentlemen, for the moment I forgot that you are Americans, not having a national flower you naturally would not know that there is to be a convention of national flowers. Many years ago England honored my ancestors by appointing them England's national flower, and to-day we are acknowledged as such the world over. We hold our convention in the tropics that we may not be disturbed by man. Since you have been kind to me in allowing me to go my way, I will use my influence, which is not slight, in your behalf, that you may be present at our meeting." After giving minute directions as to where the meeting was to be held, the rose inclined her beautiful head, and said "I hope to see you gen-

tlemen there, and if I can be of any service to you, ask for the 'Queen of Flowers,' and I shall be yours to command."

You can imagine the surprise of the grower and dealer when they heard a rose talk in this manner; but they congratulated themselves on their good luck and started out at once in search of the place of meeting, feeling sure that they would be able to get some valuable specimens. Finally they heard the music of many birds singing in concert, without one discordant voice; as they approached the music gradually died away until the soft, sweet voice of the canary, that had never known a cage, seemed to be alone; then the delightful odors came to them, not oppressive, but intoxicatingly ravishing; and at last they came in view of a beautiful lake. On its banks were collected the grandest plants and flowers that were ever seen; the canary who had been singing alone was now joined by other birds, making the whole scene so grand, something so far beyond their imagination, that the men threw themselves on the ground overcome with rapture; they seemed to lose all their selfish thoughts and desires, and to give themselves up to the enjoyment of their senses as completely as though the poppy had done the work. The music continued to increase in volume, until the men felt that they would lose their reason with rapture; when it ceased, then they wished it might go on forever. As they lost their selfish desires, a new sense seemed to come to them; the flowers were no longer merchandise and these two men who had always looked upon them as such, now saw them with different eyes; how tenderly they would now handle and love them for their wonderful beauty, their purity, their delicious odors and their marvelous coloring. These men could now understand the language of flowers, and by listening attentively could hear their innocent gossip; the heliotrope and violet were telling of their many messages of love that they had carried; the pansy thought that it could not be outdone in this respect. The romantic azalea and the sympathetic camellia had different stories to tell. The little coquettish morning-glory was flirting with the egotistical narcissus.

Finally the rose called the meeting to order: "My dear friends, I can not express the great happiness I feel in being here, and I assure you that there is never a moment in my life when I am unconscious of the double honor of being the 'Queen of flowers,' and of having been chosen by the grandest nation on the earth to represent it. My one prayer is that we may always deserve these honors; that my sister's delicate pink cheek will always blush with modesty, and never with shame; that the wild rose may always be innocent, and the sweet-briar as sympathetic; that our dear little sister who asked the fairies for moss, may never be led into false pride and vanity, because they granted her her wish; and that our brother the Hybrid may never be pompous, but always grand and noble." She ended her remarks by saying: "I take great pleasure in introducing to you our oldest member, the Egyptian Lotus."

This beautiful flower then raised its lovely head from the lake and said: "Our sister, 'The Queen,' in introducing me said I am the oldest member; I hope no flower here will think that I am older in years than they are, but it is a fact that I was the first member of the society; before the pyramids were built I was the

VASE AND BASKET OF ORCHIDS. [REPRODUCED FROM GARTEN FLORA.]

national flower of Egypt, the 'Sacred Flower of the Nile.' If I had the power to communicate to men, I could tell them of people and nations that they have never dreamed of; the writings on the obelisks are plain to me; all my life I have been loved and worshipped by the Egyptians. The rose is justly proud of the nation she represents, but for me to look back on the centuries that I have held the office, England seems to me but a child. One of the greatest pleasures of my life is to float on the beautiful river and dream of my past life. Of the generations and generations of men that I have known, how they fret away their short lives in petty contentions, but to me they have all been loyal; on the buildings of which they have been the proudest they have copied my shape; in the Egyptian column they have used my flowers for the capital and my stem for the column.

"On the finest ornaments and conventional designs, all of which are copied to-day (and I am often amused by men calling these designs original) you also see my shape. When I think of how men worry through their short lives my mind always goes back to several years ago when a Roman called Marcus Antonius came to our country and fell desperately in love with our beautiful Queen Cleopatra; he was thought to be great among men, a brave warrior, an eloquent orator, etc., but with all he was very weak. Often has he plucked my flower for the

lovely queen to caress; she was one of the most beautiful women that I have ever seen, richly educated and ambitious as the word was used then, but with all they were not happy; often in her petty anger she has crushed my tender frame and cast me aside, and as often has one of her slaves picked me up and tried to repair the wrong done me. I do not complain, however, my life has been a very happy one, I frequently regret that men in seeking happiness so seldom take the right paths; but as I have noted this all my life I presume it can not be helped. I fear in my remarks I have drifted on rather unpleasant subjects, but my country has seen so many changes that I am apt to look back and sometimes I do feel a little old; but I assure you that I am very, very happy and thankful to be with you."

The rose then got up and said: "We have a little friend with us who has come a great distance and is anxious to get home again, the Edel Weiss of Switzerland." "I must first," said the Edel Weiss, "apologize for speaking before so many of my friends who have lived broader lives and represent grander countries, and the rose does express my wish when she says I want to get home. You all know that I live high up on the mountains in Switzerland, where the air is delightfully cold, and this torrid heat is oppressive; I have known nothing of the life and history of which the lotus spoke. I have known nothing but pure love and

devotion all my life; I have been sought often for years by lovers that they might give me to their sweet-hearts. The greatest unhappiness that I have ever known has been when that often cruel little fellow Cupid has induced lovers to take such great risks to climb so high in search of me, that I have often feared for their safety, and frequently have seen them led on to their destruction; how gladly I would have reached out my hands to help them had it been in my power; but my life has been all happiness, with but these few exceptions, and if, my dear friends, I never again venture so far from home in all the years to come, when I am alone on my quiet mountain the pleasure of these few hours will never for a moment leave me." This simple little story so pleased all present that they all bowed, and even the palms and oaks bent their stately foliage and limbs in approval; the forget-me-not and violet rushed to their little sister to congratulate her.

The rose then introduced the palm and laurel; they both told of the part that they had taken in the history of man; the victories they had proclaimed, and how they had always been associated with the noblest of men; the palm spoke of how centuries ago it had directed men in the search for water and in this way it indicated victory and a resting place on their journey.

The laurel spoke of the favors it had received from Apollo; the palm said it

had received equal honors from Cupid and Venus. The acanthus had many tales to tell of how it had been honored by the Greeks. The chrysanthemum discoursed prettily about Japan. The thistle was as loyal to Scotland as the best of Scotchmen. The shamrock had never known a prouder moment since the day St. Patrick plucked a leaf and used it to illustrate the doctrine of the trinity; proud because it had a voice among the national flowers, but grieved with her lovers that her country had no voice among nations. The rose stooped down to the shamrock and said, "Do not grieve, little sister, justice will be done some day."

There was a rustling among the trees, the flowers looked up and the oak gave a stately bow. It said: "I have not the honor of being a member of this society, but I have the great honor of being a candidate of the grandest nation on the earth; I trust that I shall not give offense and I should not, because the nation I speak for has offered and given shelter to men from every country that is represented here to-day. When the lotus spoke of the youth of England, it came very forcibly to my mind how young my country was; it seemed to me but yesterday, when a Puritan youth and maiden carved two hearts and the year 1620 on my bark. My little friends, can you imagine a country so large that if England, Ireland, Scotland, Japan, France, Germany and Switzerland were all five times as large as they are, you could put them all in my country, and still have space left to put five or six Switzerlands? It has been said that my country has no history; the history of the world is ours; our nation is made up of men from all others, and by following one fixed purpose and maintaining the union, they have developed the grandest model the world has ever known. Another mistake that has often been made is—a number of flowers think—that my people lack sentiment. It is true they have been obliged to put up with many hardships, and at times they have appeared too practical and hard hearted, but these same hearts have been hearts of oak and their nature like my own thrived under adversity, and from a small beginning have grown in these few years to be the monarch among nations, as I am often spoken of as the 'Monarch of the forest.'"

"I could talk for hours of the love my people have for flowers and plants. A great many pretty little romances happen under my boughs, and the whispering pines tell me the rest. The water lily and golden rod have also been nominated to represent our country, and would have been with us to-day, in fact we started together, but the poor little water lily, as darkness came on, grew very sleepy, so when we came to a pretty little pond we laid her there, and after bidding us good night she fell peacefully to sleep. The golden rod, a bright yellow, which we all know indicates a jealous and unhappy disposition, quarreled with a farmer on the road and was killed. For these reasons I feel that they will not be considered proper emblems for our country. For myself I cannot imagine greater honor or happiness than being selected as a national emblem by the United States and the proudest day of my life would be when a wreath of my leaves would be placed around our motto, 'E pluribus unum,' and to me it would not only mean many states, but many nations in one."

As the oak finished the flowers and trees applauded, and the birds sang, and

all agreed that if the oak was elected they would hold their next convention in the United States. The grower and dealer who had been listening with great attention resolved that when they reached home they would give their hearty support to the oak. H. H. BATTLES.
Philadelphia.

Daily Record of Work Done at the Lincoln Park Greenhouses, Chicago, 1887.

October 16—Tem. morning 51°, noon 70°, evening 62°. Wind SW. to S. Sunday.

17—Tem. 50, 57, 50. W. Continued spading tulip beds. Commenced potting rooted geranium cuttings. Wheeled manure out of frames.

18—Tem. 45, 57, 46. WNW. to S. Continued potting rooted geranium cuttings. Finished spading tulip beds. Dug up and took inside canna roots.

19—Tem. 40, 58, 53. S. Continued potting rooted geranium cuttings. Continued digging canna roots. Cleaned up frame yard for winter and spread leaves a foot deep over the whole yard to keep frost out of the ground, so can conveniently start early hotbeds in the frames in early spring.

20—Tem. 50, 58, 45. WSW. to NW. Finished digging and taking inside canna roots. Cleaned vases and stands of plants. Continued potting rooted geranium cuttings.

21—Tem. 35, 42, 33. NW. Prepared pansy frame for spring use. Potted rooted cuttings of heliotropes, maurandias, tropæolums, gnaphaliums and Mme. Phitzer geraniums. Potted some strong pansy seedlings.

22—Tem. 27, 45, 42. NW. to S. Potted rooted cuttings of cupheas, alyssums, lophospermums, lobelias, nierembergias and Mme. Salleri geraniums. Continued preparing pansy frame for spring use. Lincoln statue unveiled this afternoon.

23—Tem. 50, 58, 42. S. to W. Sunday.

24—Tem. 34, 44, 34. NW. Commenced planting tulip bulbs. Potted rooted cuttings of Mme. Salleri geraniums.

25—Tem. 18, 29, 26. NW. Covered out door beds of roses temporarily with leaves. Continued planting tulip bulbs. Continued potting rooted cuttings of geraniums.

26—Tem. 27, 42, 27. SW. Continued planting tulips. Took up erythras. Continued potting rooted geranium cuttings.

27—Tem. 29, 48, 45. W. to S. Same as yesterday.

28—Tem. 43, 55, 50. SW. to S. Finished planting tulips. Commenced potting echeverias taken in from outside. Arranged chrysanthemums in No. 1. Continued potting rooted geranium cuttings.

29—Tem. 38, 38, 38. N. to NW. Continued potting echeverias from outside and rooted geranium cuttings. Took inside rhododendrons.

30—Tem. 34, 44, 40. SW. Sunday.

31—Tem. 34, 55, 45. W. to SE. Same as Saturday, and moving plants to make room for little geraniums. Chrysanthemums now at their best.

DOUBLE AURATUM LILY.—Mr. E. F. Siegenthaler, of Wooster, O., sends us a stalk of *Lilium auratum* bearing two flowers with double perianths. There are two rows of segments in each flower, looking much as though one had been set inside of another.

Washington.

The charges which the seedsmen of the country are making against commissioner of agriculture Colman are very severe, and a Senate investigation will undoubtedly be ordered in accordance with Gen. Hawley's resolution presented to day. The memorial to Congress from the Seedsmen's Protective Association is signed by many of the leading firms all over the United States. They claim that Commissioner Colman spends the whole appropriation made by Congress for seeds for distribution to farmers with one or two firms, and that they repeatedly ship him worthless seeds which they have bought up of small dealers, because they had not enough to fill the big orders from the Agricultural Department. The seedsmen claim also that it is the intention of the law to have the department distribute new varieties of seeds to farmers for the purpose of testing them, and adding to the supply and variety of vegetables, and not to simply send so many seeds each year to every farmer without regard to quality. The charges against Colman are asked go into details, to show that vast quantities of seeds were bought up by the favored firms and resold to the department at three and four times the market price. The investigation will probably be conducted by the Senate committee on agriculture.—*New York Sun*, Sept. 21.

Coming Chrysanthemum Shows.

Philadelphia, November 13-16.
Boston, Mass., November 14-16.
New York, November 13-15.
Orange, N. J., November 7-9.
Cincinnati, O., October 22-27.
Indianapolis, Ind., November 13-17.

Some Queries.

Will some one kindly inform me through the *FLORIST* the mode of treating *Fritillaria imperialis*? Is it best grown in pots?

When should *Lilium candidum*, *L. Harrisii* and the fritillaria be brought into the house in order to have them in bloom for Easter? Will the same temperature do for all?

When should *Deutzia gracilis* be started for same purpose? E. H. Baltimore.

VERBENAS.—Mr. Yates, of Ellicott City, Md., showed me some seedling verbenas the other day that I unhesitatingly declared to be the poorest I had ever seen. Close by, however, he had another lot grown from different seed and as good as the others were inferior. The first batch was from seed costing at the rate of \$12 per ounce, while the seed from which lot No. 2 was produced cost him \$2.50 per ounce. The latter seed was purchased from a Philadelphia dealer, and I mention this fact in order that the Quaker City brother may have an opportunity to "hump" himself in piling on the price to his verberna seed before issuing his next catalogue. The finest verbenas, however, that I have yet seen I grew last spring from seed purchased from Hallock & Son. It has proved the finest strain I ever handled, and my verberna beds have been a pleasure to myself and the admiration of visitors all summer.

A. W. M.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

Seasonable Floral Styles.

Although large roses will never be superseded in favor, there is a boom in small flowers which are made up in hand bunches and which find their way in clusters in most designs. Center pieces of roses entirely are not arranged for the most stylish decorations, but these have a section of lilies, larkspur, or daisies. As long as they are to be had wild flowers will appear in rose designs. Baby daisies, purple asters and golden rod are brought daily to the florists and are used among rich flowers with charming effect. Very small specimens of the new crop of Bon Silene roses with knots of Faust pansies make pretty contrasts in the rose baskets, those having scalloped borders being so arranged that at least two scallops are filled in with small flowers. The small pink roses referred to are used almost solely in ornamenting the baby baskets so fashionable at present for gifts to new comers. A picture will appear shortly of these baskets, which are more convenient and decidedly more ornamental than the regulation kind without a handle.

More flowers are used this fall for the embellishment of breakfasts than have heretofore been seen in this decoration which has ranked among the simple ones. Mrs. Irwin, of Wall street, arranged the flowers for the breakfast of Mr. Depew on the morning of his arrival from Europe. A large center circle was formed on the table with La France roses and clusters of lily of the valley. At each plate there was a cornucopia containing a bunch of roses very daintily combined with Eucharis Amazonica on long stems. At breakfasts it is now the style to have an extra favor for any one who happens in. This piece is placed near the cover of the hostess. Floral rugs are used considerably in breakfast rooms when there is no attempt at banking the mantel pieces or garlanding. Cape flowers are introduced in the rugs to define Persian patterns, and they are rather an improvement than otherwise.

Room decorations are still made with colored leaves, and choice flowers for the table and cabinet ornamentation. The bunches of colored leaves are very artistically arranged and have a graceful and gorgeous effect when finishing chains or garlands over doors, windows or mirrors. Particular attention is being given to the trimming of candlesticks and candelabra. The stems of these are surrounded with long stemmed flowers such as spikes of larkspur or tuberose, and these are fastened with a sash and bow. Foliage and flowers trail from the base of candlesticks when these are placed at the end of the mantelpiece. Fireplaces are decorated very elegantly just now. Andirons are made of calendulas and Faust pansies, the latter representing the dark

metal. The flame from the pine sticks is represented by tritomas and salvias. After the autumn leaf decorations are over it is predicted that styles will be much less elaborate and more severe for room embellishment. Orders are being received for late fall weddings when rugs and cushions worked out in chrysanthemums will be the only floral ornaments. Straw panel pieces will probably be the vogue for ornamenting walls at the fashionable balls of the winter.

Branches of gilt laid on a background of greenery will be among wall decorations. On the branches will be hung favors for the cotillon. Favors for dances are elegant, it is a little early to introduce them. FANNIE A. BENSON.

New York.

New York.

Henry Siebrecht is having elaborate drawings made of Rose Hill conservatories.

Some of our leading florists are projecting flower shows which will be on a grand scale.

There is a very handsome crop of Grace Wilder carnations offered at present.

Rufus Abbott has again opened a floral stand in the Erie station, where he keeps fine flowers and is well patronized.

There is a great deal of competition and estimating in progress for coming entertainments.

Peaches preserved by a secret chemical process in storage houses in Baltimore are now the finest in market. They are of all late kinds such as Crawfords, late Rarities and White Heath, and sell for \$4 a crate and from 75 cents to \$1 a doz.

Pickling cucumbers are in excess of last year's amount. Those raised on Long Island and in Westchester county excel in flavor and keeping qualities.

New Orleans hothouse mushrooms are the only ones to be had here at present

Floral Atrocities.

Among the floral "designs" entered at a recent exhibition was one described as "a column about six feet high, around which was coiled a green snake, his mouth red with blossoms from the geranium, wide open."

We really must call a halt. We do not believe in refusing to make what a customer orders if he is willing to pay well for it, but for goodness sake don't feed the fire by exhibiting such atrocities as that described.

If a customer wants a floral beer barrel with a floral glass of beer on top—a "design" which we understand was ordered some time since for the funeral of a brewer—and a liberal amount of cash accompanies the order, make it, (softening the outlines as much as you can), for

our bread and butter must come from the business, but whenever you can do so without giving offense, discountenance the spoiling of good flowers in the construction of such monstrosities. Tolerate them but don't attempt to lead the public deeper into the mire.

Exhibitions should be educational. Make them so by showing something which pleases your own eye rather than that of the butcher who has suddenly acquired some wealth but is a butcher still.

SINCE our expose of a firm whose business methods were apparently somewhat shady, we have received many letters intimating approval of our course, which were duly appreciated. We do not intend that any rogues shall use our columns and should any creep in unawares we shall promptly expose them as soon as discovered. But, we have also received a number of letters complaining of treatment received from various reputable houses of which we can not take cognizance in print. We do not undertake to adjust trifling differences between buyer and seller, or to publish a reputable house to the trade for some trifling error. When such occur first make your complaint to the house direct, and be governed by the advice in Uncle Blackstone's letter in last issue.

Catalogues Received.

I. N. Kramer & Son, Marion, Iowa, plants; Kennicott Bros., Chicago, florists' wire designs; J. A. Simmers, Toronto, Ont., bulbs; Societe Anonyme L. Horticulture Internationale, Brussels, Belgium, orchids and new plants; Armand Colombe & Sons, Ussy, (Calvados) France, nursery stock; A. M. C. Jongkindt Coninck, Dedemsvaart, near Zwolle, Holland, bulbs and plants; H. Cannell & Sons, Swanley, Kent, England, bulbs, plants, seeds; H. H. Sanford & Co., Thomasville, Ga., plants and nursery stock; E. H. Krelage & Son, Haarlam, Holland, bulbs; R. S. Brown & Son, Kansas City, Mo., plants and bulbs.

The Golden Rod.

Never a king can statelier nod
Than the glorious August golden rod!
No crowns are richer with hammered gold
Than those which its strong green stalks uphold.
And yet we can pick the carriage full
In a twilight drive by the river cool—
So common, so thick, are its shining crowns
Over the uplands and over the downs.
And the farmers say this beautiful thing
Is only fit for the harrowing.
Alas! that the truth must aye be told,
"All that glittereth is not gold!"
—Kate Upson Clark in *The Congregationalist*.

News Notes.

PORTAGE, WIS.—J. Bean is completing two small houses.

GOSHEN, IND.—E. N. Burt has built another new rose house 60 x 20.

NORWICH, CONN.—Joseph Smith has built a new palm house and office.

LINCOLN, NEB.—L. C. Chapin has completed two new houses 100 x 22, heated by steam.

RUTLAND, VT.—H. De W. Bodmer, formerly of New York, has opened a floral store here.

OSHKOSH, WIS.—John Nelson has added a new rose house 75 x 18 and a carnation house 75 x 11.

YOUNGSTOWN, O.—The people of this city are agitating the question of securing land for a public park.

COUNCIL BLUFFS, IA.—L. A. Casper has just completed a new greenhouse 140 x 12 and a packing shed 140 x 10.

SPENCER, MASS.—F. F. Myrick has retired from the firm of Myrick & Hoyle. The business will be continued by A. W. Hoyle.

ST. PAUL, MINN.—L. L. May & Co. have built three houses 75 x 20 each, one 75 x 16, another 75 x 11 and one 100 x 25, all heated by steam.

ERIE, PA.—The second meeting of the Erie County Horticultural Society was held Sept. 26. An excellent display of grapes was made.

NEW HAVEN, CONN.—An amateur in this city has two rose geraniums which have grown to a height of ten feet. They are two years old.

GREEN BAY, WIS.—Reinecke & Wendorf have built two new houses 75 x 14 and 75 x 20 respectively; also a small propagating house.

SYRACUSE, N. Y.—A clothing house in this city had recently on exhibition in their window a floral baby carriage as a window attraction.

ANDERSON, IND.—J. S. Stuart has just completed two greenhouses 100 x 18 each. He would like price lists and catalogues from which to select a stock.

WAUKESHA, WIS.—Twenty acres of land has been purchased by E. V. Beales, formerly of St. Paul, who will go into flower growing extensively here.

COLUMBUS, O.—Sept. 26 a special display of cut flowers was made at the Ohio Centennial Exposition in this city. Prizes aggregating \$200 were awarded.

POUGHKEEPSIE, N. Y.—Herbert S. Ransom has completed four new greenhouses at Highland, to be used for growing roses for the New York market.

SPRINGFIELD, ILL.—In the pond at Oak Ridge cemetery six varieties of water lilies and lotuses have been successfully grown and bloomed the past summer.

BERWYN, PA.—E. G. Hornbrooke & Co., have sold out their florist business to John Hensall, who will continue it. The nursery business will be discontinued.

WESTERLY, R. I.—S. J. Reuter has just completed six new greenhouses, four being 15 x 72 and two 10 x 72 each, making him fifteen houses in all, heated by steam.

MILWAUKEE.—Mr. C. B. Whitnall has been elected president of the Florists' Club and F. P. Dilger, vice president. Mr. Frank Whitnall will go to California about January 1.

ROCHESTER, N. Y.—W. A. R. Morehouse, until recently general manager for Hiram Sibley & Co., has severed his connection with that firm and will soon open a new house.

HARRISBURG, PA.—Joseph Schmidt has rented his seven greenhouses to Logan McClintock, a young but well posted florist. Mr. Schmidt retains his store on North Third street.

MORRISON, ILL.—Robert Davis & Son market gardeners here, are building a greenhouse 50 x 20 and will branch out into floriculture. They will also handle seeds for local demand.

BANGOR, ME.—At the recent Eastern State fair the total number of entries in the horticultural departments were 599 against 408 last year. In flowers and plants there were fifty entries.

PROVIDENCE, R. I.—The floral exhibits at the state fair were numerous, but mostly made by amateurs, Robert Johnston and George Westcott being about the only florists who exhibited.

AUSTIN, TEXAS.—Wm. Radam the florist and nurseryman is gaining considerable notoriety by claiming to have discovered a sure cure for the yellow fever. He calls his remedy a "Microbe Killer."

BEAVER DAM, WIS.—Joseph Wagner received a thousand dollar check from the railroad company for the privilege of running through his new greenhouse, and he is now building two more new houses 60 x 18.

APPLETON, WIS.—Dennis Meidam has built four new houses, two 75 x 11 each, one 75 x 20 and another 15 x 12. Also a packing room 40 x 10 and an office 16 x 16. He has a stone basement 30 x 16 for dormant plant, in winter.

QUINCY, ILL.—We had a sharp frost the night of October 1 that killed all tender plants which were unprotected. Summer trade has been very light. Plants for forcing are in fine condition and a lively winter trade is expected.

MONTREAL.—The floral department at the annual show of the Horticultural society was a splendid exposition of floriculture in this section. The exhibits of both plants and flowers exceeded in numbers and quality those of any former exhibition.

MEADVILLE, PA.—On August 29 one of the churches held a floral exhibition at which prizes were offered for flowers and plants grown by the Sunday school scholars of various ages. There were a large number of entries and much interest was developed.

WASHINGTON, D. C.—N. Studer is building five houses 20 x 300. He says he looks for better business this winter than ever before. All the other florists are repairing and getting things in shape for frost. Business has been very dull except in funeral work.

LANSING, MICH.—Prof. L. R. Taft, a graduate of Amherst Agricultural College and for some years a professor of horticulture in the Missouri Agricultural College, has been engaged to fill the place made vacant by the resignation of Prof. Bailey at the Michigan Agricultural College.

BLOOMINGTON, IND.—The Indiana State University has received very liberal appropriations from the state and its twenty acres of grounds are being handsomely laid out. Plans have been drawn by O. Benson, a Chicago landscape gardener, and work is now progressing.

BROOKLYN, N. Y.—A stranger called at the greenhouses of florist L. Rhoades Sept. 20, and ordered some flowers. When the florist returned from another house where he had gone to cut some flowers, he found that the stranger had committed suicide in his absence. No clue to the stranger's identity was found.

LARNED, KAN.—The gardeners of Pawnee county recently met and formed a mutual benefit association with a membership of seventeen, and elected officers as follows: President, Henry Booth; Vice-President, W. T. Jackson; Secretary, A. J. Burdick; Treasurer, Archie Cook. The object is to maintain uniform prices.

DANVERS, MASS.—Among the attractions on the grounds of the hospital this season was a Chinese pagoda seventeen feet high of growing plants. There was a dome supported by six pillars with archways high enough that a person might walk under without stooping. There was also a sun dial in plants.

SAN FRANCISCO.—At a meeting at the rooms of the State Board of Horticulture September 21, a State Board of Floriculture was organized and Messrs. A. D. Pryal, of Oakland, B. M. Leloug, of this city, W. A. T. Stratton, of Petaluma, and David J. King, of this city, were appointed a committee to draft a constitution and by-laws.

TOPEKA, KAN.—At the recent exhibition premiums for "best and most effectively arranged general display of plants in pots" were awarded as follows: Frank Sachs, of North Topeka, first, \$60; D. A. Rice, Topeka, second, \$40. Paul M. Pierson & Co. received firsts for "best and most tastefully arranged floral display" and "best arranged basket."

BROOKLYN, N. Y.—Martin Kennedy, a gardener in the employ of James Weir, Jr., the florist opposite the entrance to Greenwood Cemetery, has sued the trustees of the cemetery for \$20,000 damages. He claims that he contracted blood poisoning by drinking water from a hydrant in the cemetery not being warned that the water was from wells in the cemetery and consequently poisonous.

NEW BEDFORD, MASS.—W. S. Brown built a large rose house this summer. His plants are looking finely and give promise of a good crop of buds this winter. His chrysanthemum house contains about 1,500 plants of the best varieties in 4 inch pots up to large specimens in 12-inch pots. All his stock is in excellent condition and reflects credit on his foreman John Rooney.

LA CROSSE, WIS.—J. C. Easton, a local amateur, has built some very pretty conservatories, containing 7,800 feet of glass. Edw. Kirchner is the gardener in charge. Paul Zoellner succeeded P. E. Steves as superintendent at the Oak Grove greenhouses. The John A. Salzer Seed Co. is making some changes, moving the general office upstairs and using the first floor for a show-room only, and otherwise improving their facilities. They report trade as unusually good. At North La Crosse Bernhard Beyer has built two rose houses 100 x 20 each and a packing room 50 x 14, all constructed in best style.

ELMIRA, N. Y.—At the state fair September 17-22, floral hall contained probably the finest exhibition of plants, cut flowers and floral designs in the nearly fifty years history of the society. James Vick, of Rochester, excelled in cut blooms of dahlias and gladioli. Rawson of this city had the largest general exhibit, securing first premiums on general collection of plants, also for palms, geraniums, fuchsias, etc., in separate classes, first on roses, floral designs, etc. Mrs. H. D. Wells, of Elmira, had a creditable display, but not taking as many premiums. The amateurs of the state were out in full force.

CLEVELAND.—James Eadie has extended his Euclid avenue store making it now 16x40. A bay window with stained glass is another feature, in addition to many other improvements. At his greenhouses he is building a cold house for bulbs. J. M. Gasser is adding 3,000 feet more glass, making him a total of 53,000 feet. Mr. W. J. Leitch resigned his position at the Newburgh asylum Oct. 1, to go into partnership with J. C. Gooding. The style of the firm will be Gooding & Leitch. The new firm has purchased eight adjoining lots and is building two new houses 100x21 and 100x8 respectively, all heated by steam.

MILWAUKEE.—At the recent exhibition first premiums for most artistically arranged floral design, most tastefully arranged basket, best pyramidal bouquet, best display roses, and best display ornamental foliage plants were awarded to F. Whitnall & Co.; for best collection cut flowers, best pair flat table bouquets, best five named varieties roses, best twenty greenhouse plants in bloom, best ten geraniums, and best display of flowers of all kinds grown by exhibitor, to G. W. Ringrose; for best ten named dahlias to Chas. Hirschinger; for best show pansies to Wm. Toole; for best show gladioli, best show lilies, best show greenhouse plants and best six fuchsias to Currie Bros.

Boston.

Snow flying in the air October 9, not an outdoor flower left, carnations not established in the beds yet, and chrysanthemums only showing bud. The telegraph boys' step makes the heart of the commission man glad, the grower comes to town with head erect and a new backbone, while the retailer pulls down his old vocabulary of "cuss words" and prepares himself for vengeance upon all "combinations" and cases of "large head" that crop out in his vicinity, and fills his show windows with plants, baskets and immortelle designs while he waits with as much patience as possible for the tide to turn.

W. J. S.

Philadelphia Chrysanthemum Show.

Preparations are being made for the grand chrysanthemum show which takes place in Horticultural Hall Nov. 13-16.

Philadelphia has well earned the reputation of having the very best chrysanthemum shows in this country, and she will more than retain that reputation this year. Every lover of this favorite flower should not fail to come and see it. Call on Secretary Farson at his office and any information will be cheerfully given and courteous treatment may be depended upon. Send for the new schedule which may be had by addressing Mr. Farson,

Horticultural Hall, Broad St., Philadelphia, Pa.

The Florists' Club will have its annual chrysanthemum supper on Tuesday evening. It would be a pleasure to the club to have visitors report on their arrival in the city, so that an invitation may be extended to our brethren from other cities. L.

The Florists' Clubs.

It is not encouraging to learn that at least one or two of our florist clubs are in an unhealthy condition, for the beneficial influence of these organizations can scarce be doubted. Apart from their educational tendencies they have a social aspect which in no small degree enhances their value. The club meetings not only afford members an opportunity for discussing matters of vital importance in a business sense, but also for indulging in social converse for the cultivation of a closer intimacy with each other, thus helping us to bear more charitably with some brother's eccentricities or infirmities, and to a fuller appreciation of his good qualities. I have noted with much satisfaction the interest that is being awakened among florists and the various efforts that are being put forth with a view to elevating the florists' vocation. Little by little abuses hitherto existing in the trade and tending to bring it into public disrepute, are being crushed out; unscrupulous dealers are beginning to find their occupation gone and their places taken by men of principle and intelligence. But no permanent good can possibly be accomplished except by persistent and united effort on the part of those engaged in the business. "In union there is strength," and as a means to this end the organization and permanent maintenance of local clubs is specially desirable. Then again, no general association, such, for instance, as the S. A. F., can very well give attention to all business interests or abate business grievances in every section of the country. Trade interests are not, in all respects, universally alike, and there are grievances peculiar to certain localities. Therefore the utility of a local organization must be quite apparent, since it affords a medium for the concentration of business interests and for the more expeditious and effectual removal of trade grievances in a particular locality.

As a matter of course the writer has his individual ideas—wise or otherwise—concerning the management of florists' clubs. I will, however, content myself by saying that I consider it bad policy to continue the same men in office for more than one term. They may be very able and capable men, but for many reasons I regard the election of new men each year as most conducive to the welfare of the club. I am also very much in favor of making the florist club a beneficial organization. The Baltimore Club has adopted this plan, which I consider an excellent one. It tends at least to keep up the active membership, and the very nature of the system is calculated to keep the finances of the club in a healthy condition. A. W. M.

HUGHES' SOLUBLE FIR TREE OIL.

FLORISTS AND NURSERYMEN SHOULD NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectually all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants: such as ferns, etc., if used as directed. Used as a WASH it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

Dog fanciers should not be without it! It makes a silky coat and produces healthy skin action; kills fleas, and is excellent for washing dogs.

Housewives should not be without it! Used with ordinary household soap it is an effectual DISINFECTANT, BLEACHER and CLEANER OF FABRICS. It kills insect life on man, animal, or plant, without injury to the skin, wherever parasites may appear.

Put up in 1 gallon tins, \$3.25; Full directions & trade Put up in 1 quart tins, \$1.00; mark on each package.

HIGLEY'S TRADE LIST OF SEEDS, PLANTS, BULBS AND FLORISTS' REQUISITES

Now out. If you do not receive one, send for it. Address

HENRY G. HIGLEY,
CEDAR RAPIDS, IA.

A Trade Secret.

Last May a Young New Yorker started out to Hunt novelties for his fall catalogue. He set the Ball rolling by taking a Gurney to a Hill in Indiana where he found on the topmost Craig a curious Pitcher plant which he concluded would be a real "acquisition," but the King of the natives would not permit it to be taken away.

In order to Currie favor with this potentate, one night when the Moon was Fuller than usual he instructed him in a Stew-art which greatly pleased him and at the same time commenced to Fisher round for the haud of his Dingee daughter. After allowing the young couple to Spooner round for a Little while the native Parson's services were secured, the Menand women of the tribe assembled and the twain made one. Knowing that the men of the tribe would not Henderson's in law of the King in any act, he once more attempted to secure the plant. Procuring a stout stick of Wood he proceeded to Whittle it to a sharp point and with this as his only weapon he sallied forth, packed the plant for a long journey and turned his toes to the east. His wife however detected him as he was substituting his room for his company and commenced to Maule him with her stuffed club over the head where the Harris scantiest. He finally overpowered her and heaped Coles of fire on her head by giving her a farewell kiss on the nose and fled where none would A. Lauer to repeat her club practice.

After a tiresome journey during which he had many Battles with hostile tribes, streets Arabs and other savages, he reached Philadelphia on a bleak Dreer day in October and exultingly showed his plant to a number of Gardners who at once pronounced it neither Neuner valuable.

The young man still lives but his Grey head tells his mournful tale of misdirected effort. G.

HARDY * ORNAMENTAL * SHRUBS

FOR FLORISTS TO SELL.

A SAMPLE LOT OF 50 KINDS

TO THE TRADE ONLY

—* FOR \$10.00. *

In order that florists everywhere may grow to appreciate the value of a line of samples of this kind, and add a new department to their business, we have decided to make the following offer to the trade only.

We will furnish one each of the following list of fifty (50) distinct and valuable selected kinds of flowering shrubs and trees, packed and delivered in New York City for \$10.00. The plants will be of regular catalogue size, and of finest quality in every respect.

Japanese Maple—Dark purple. Low growth, somewhat erect form, foliage dark purple or claret tint, very deeply cut. A very attractive and decorative form; best variety for pot culture.

* **Daphne Mezereum**—Red flowers, small bush, blooms in April.

Purple Berberry—Violet-colored foliage and fruit. Rich looking and effective.

Berberis Thunbergii—Compact, glossy, light green foliage. The best hedge plant.

Clethra alnifolia—Growth low and dense, leaves abundant and light green; numerous small spikes of white and very fragrant flowers in July. A valuable shrub.

Red Flowering Dogwood—Flowers suffused with bright red color lasting long. A new variety of remarkable merit.

White Variegated Dogwood.

Cydonia Japonica (Japan quince) *simplex alba*—Pure white flowering variety.

Cydonia Japonica rubra grandiflora—Large red flowers.

Cydonia Japonica tricolor—A beautiful variegated-leaved variety.

* **Deutzia gracilis**—White, dense bushy low-growing, end of May or first of June.

* **Deutzia crenata flore plena alba**—Flowers double white tinged with pink in racemes four or five inches long. One of the most desirable flowering shrubs in cultivation.

* **Exochorda grandiflora**—Vigorous growing, finely shaped shrub, with light colored foliage and wood, and a great profusion in May of the most lovely pure white flowers.

* **Forsythia Fortunei**—Yellow, flowing bushy habit, April and May.

Forsythia viridissima—Differs from *F. Fortunei* in a more straggling growth and deeper colored flowers and bark. It also blooms earlier.

Hydrangea paniculata grandiflora—Vigorous spreading form, immense pyramidal panicles of white flowers more than a foot long.

Hydrangea nivea—A vigorous growing, hardy variety, with leaves of a silvery white underneath.

Hydrangea quercifolia—American species. Vigorous shapely growth, large foliage like that of the oak, downy beneath, and richly tinted in autumn; white flowers in spikes, showing finely among the massive leaves.

Buis's' variegated leaved Allheas.

Hypericum Kalmianum—Low spreading bush with small bright yellow flowers in August.

Ilex Virginica—Small bush, white flowers in June; very beautiful in autumn tint.

Ligustrum ovalifolium.

Lonicera fragrantissima—A vigorous shrub of upright habit, suited to almost any soil and exposure; leaves good size and rich green; flowers pinkish early before the leaves and very fragrant.

Philadelphus grandiflorus—Strong growing branches, showy large slightly fragrant flowers in June.

Golden Philadelphus holds its color well.

Prinos vilicillata—Vigorous upright bush; fine ornamental red berries in autumn.

* **Double Flowering White Almond**—Beautiful double white flowers in May.

* **Double Red Flowering Almond**—A beautiful small shrub, bearing in May, before the leaves appear, an abundance of small, double, rose-like flowers, closely set on the twigs.

Prunus Pissardii—A red-leaved plum of permanent color.

Rhodolypus kerrioides (Japan)—A very pretty shrub with numerous pure white flowers.

Sambucus nigra aurea—Solid, golden yellow leaves. One of the very best golden-leaved shrubs.

Spiræa Callosa Fortunei (Japan)—Rich, attractive foliage; rose-colored flowers in June.

* **Spiræa Thunbergii**—Airy bushy habit, white flowers, May. Fine fall tints.

Spiræa opulifolia aurea—Large shrub, very yellow foliage, rich and massive.

Spiræa Bumalda—Pink, in terminal umbels, June and all summer. A small shrub often with partly variegated foliage.

President Mossart Lilac—Dark purple. Large trusses.

* **Chinese Purple Lilac.**

* **Chinese White Lilac.**

* **Persian Lilac**—Small leaves, purple flowers.

* **French Red Lilac**—Abundant large sized panicles of reddish flowers.

Tamarix Africana—Pink flowers in June; should be cut back and formed immediately after it blooms to obtain flowers for another year.

Tamarix Indica—Blossoms in August; very strong growing, feathery and waving in aspect.

* **Viburnum plicatum**—Medium shrub, pure white, June. Best of the snowballs.

* **Weigela or Diervilla rosea**—Erect compact growth; fine rose-colored flowers in June.

Weigela Lavellee—Flowers dark reddish purple in June, and less abundant throughout the summer.

Weigela rosea nana var.—Dwarf spreading habit and possessing clearly defined variegated leaves. Stands the sun well, and is bright golden throughout the summer.

Pyrus Malus Halleana (Parkmanii)—Half tree, blooms when small, crimson and white, May.

Purple Fringe, or Smoke Tree—This variety is a low tree with roundish head, and covered with reddish seed vessels like a purple mist.

Cut Leaved Sumac—A beautiful low tree or shrub with leaves of very large size, deeply cut and drooping gracefully from the branches. Autumnal color, a rich red.

Styrax Japonica (Japan)—Low growing shrub, or dwarf tree; white bell-shaped flowers, hanging from branches on long pedicels.

Those marked with an * are such as might be suitable for forcing.

Boilers Again.

In the September 15 issue Mr. W. W. Coles advises not to use cast iron boilers for steam heating. Right you are Mr. Coles. I had two large cast iron boilers in use last winter which caused a loss of at least \$1,000. They were continually leaking and cracking, sometimes putting the fire out when the thermometer stood at 15° with the result of freezing some of my plants.

Get good wrought iron boilers—as I have done this season—and you who are putting in steam will not be troubled by Jack Frost if your pipes are laid right and the boiler is large enough. My houses are warmed with a pressure of only one pound.

Regarding this important matter of laying the pipes, if any one wishes to know my method I will gladly respond to a query. Would give my plan here but so many different ones have been already printed that another one would tend only to confuse. If possible it is best to visit some place where you can see the method you think of adopting, in successful operation. You can then judge better than from printed plans, though if this is impossible a written or printed plan is the best substitute.

Corfu, N. Y. E. M. GIDDINGS.

SMILAX WORMS.—Will some one give me a remedy for smilax worms? R. F.

"15 YEARS' EXPERIENCE. THE GURNEY SAVES 33% PER CENT IN FUEL."

Letter from Thomas Gray, of Fitchburg, Mass.,

In reference to

GURNEY HOT-WATER HEATER.

FITCHBURG, MASS., April 13, 1888.
Dear Sirs:—In answer to yours, asking my opinion of the Gurney Hot Water Heater which you sold me, would say that I have had fifteen years' experience in heating hot houses by water, and must say the Gurney heater purchased of you has proved itself a wonder, both in power and economy, using one-third less fuel to get same results than any heater I have ever used. The brick-lined pot I consider a special feature, as it renders combustion equal throughout the entire pot.

Yours truly,

THOMAS GRAY, Florist.

"Perfect"

(Trade Mark)

Hot-
Water
Heater.

**THE MOST POWERFUL HOT-WATER BOILER EVER CONSTRUCTED.**

These Heaters contain more features for saving fuel and labor, and are better adapted for heating Conservatories, Greenhouses, Dwellings, Offices, Schools and Public Buildings than any other makes of Hot-Water Heaters. By reason of their enormous heating capacity and increased square feet of boiler surface, and positive circulation, they are the only rapid circulating Hot-Water Heaters made. At a test made the 19th of January, 1888, at the works of the A. A. Griffing Iron Co., Jersey City, N. J., (manufacturers of the "BUNDY Radiators")—where all the leading makes of Hot-Water Heaters have been tested—more power was developed, with less fuel, than any heater ever tested there. A SERIES of papers on Florida plants, by Dr. A. Schafranck, Palatka, Fla., is appearing in the *Palatka Weekly News*.

THE FORTHCOMING REPORT of the Board of Agriculture will contain a catalogue of the flora of Vermont prepared by Prof. Geo. H. Perkins.

CLEMATISES.—Which is the best way to propagate clematis plants and the best time to do it? Will *Clematis coccinea* grow readily from seed? GARDENER.

GREENHOUSE HEATING.

BY A. B. FOWLER.

Explains fully all the best systems of heating greenhouses by both hot water and low-pressure steam. Tells you the points to consider in selecting an apparatus. How to adjust same to various locations; gives the results of the latest scientific experiments. Shows how to compute the number of feet of pipe required for a given space; draft and other important matters.

It is highly commended by Mr. John Thorpe and others. Postpaid, 75c.

Long Island Notes.

BY WM. FALCONER.

PINUS PONDEROSA and P. Jeffreyi, both
imported trees in the Pacific forests des-
pise our hospitality. They are hardy
enough and they linger along year after
year with us, but they always have an
unhappy look about them.

ABIES MAGNIFICA and A. grandis are
two other Pacific trees we can do without.
The first seems to be hardy enough but I
cannot get it to make any growth. The
second grows like a weed in summer but
gets cut in winter, so unless age adds
hardiness it won't stay with us, still our
plants are several years planted here.

EUONYMUS EUROPEUS ERECTUS NAN-
US is the name of a shrub I had a few
years ago, reported to grow two feet high.
Our plants are between four and five feet
high and as fastigate in form as an Irish
yew. Hardy with us, apparently, but I
would not recommend it as being hardy
in more exposed places; and one of the
very best things of its kind that I know
of. Perfectly columnar, of close but
thrifty form, well branched and leaved
from the ground up, and although decid-
uous, the leaves have a persistent tendency
and evergreen look about them that adds
to the value of the shrub.

ROSA RUGOSA FROM SEED.—It all de-
pends upon whether you sow the fresh
seed right now or wait till spring, whether
your seedlings come up next or a year
hence.

THE CUP-LEAVED MULBERRY is a home-
ly tree. The leaves are very curious it is
true, but it has a persistent tendency to
throw out vigorous shoots bearing plain
leaves.

THE DWARF SUMACH (Rhus copallina)
has bright shining leaves that are seldom
impaired by insects, and they do color
beautifully in fall. But once planted
what an inveterate weed it becomes, it
suckers around and comes up all about

the place and soon becomes a nuisance.

DAPHNE CNEORUM is one of the sweet-
est and prettiest of dwarf evergreen
shrubs. It bears a full crop of flowers in
spring and moderate crop again in late
summer and fall. But it doesn't thrive
well everywhere. I have tried it here in
all manner of places that I thought would
please it most, but to no purpose, it seems
unhappy. At Boston, however, I have
had it in superb condition. It is hardy
enough. Nurserymen propagate it by
lifting the old plants and tearing them
apart into many pieces, also by layering,
and some who have greenhouse conven-
iences propagate it from cuttings of the
young wood. No fear of its becoming
over plentiful. One New York firm tells
me they used to handle it but have had
to stop pushing it as they could not get
stock enough of it.

CERCIDIPHYLUM JAPONICUM is a small-
ish (with us anyway) slender tree recently
introduced from Japan. Some folks like
it, others don't. In growth it assumes
two forms—a handsome pyramidal and a
dense open fall-apart shape; the first is
obtained by early attention in thinning
and shortening the shoots so as to set the
form, the second is had by just letting
the plants grow any way they choose.
I particularly admire this tree. For sev-
eral years after its introduction it was a
very rare plant, "because," Mr. A. S.
Fuller tells me, "Trumpey didn't know
what stock to graft it on." But don't
bother about grafting it, the tips of the
half-ripe shoots strike root very easily.
As the tree is a shallow rooter it thrives
only in good moderately moist soil. Our
plants have not yet shown any disposition
to flower, although they are large speci-
mens with trunks several inches in di-
ameter.

TRANSPLANTING TREES AND SHRUBS.
—I prefer transplanting all manner of
easily handled hardy trees and shrubs,
no matter whether they are deciduous or
evergreen, in fall. But in the case of
extra choice sorts or somewhat tender
kinds I'd rather wait till spring and then
plant just as soon as the ground is mel-
low. In the case of large evergreens,
particularly close growing sorts like ret-
inosporas and thuja, it often is May
before I am able to move them on account
of frost in the ground about their roots,
and we must not move them before the
frost leaves the soil else the frozen lumps,
now half rotten, will break apart and
snap off the very rootlets we should strive
to save. Pines being more open-habited
do not hold the frost much more than
would a deciduous tree. Well, but isn't
late spring early enough to transplant
evergreens? No, it isn't. We cannot
plant them too early providing the
ground is in good condition. Evergreens
don't shrivel up and die as soon as they
are transplanted; about the middle of
July you will be able to note the living

from the dying. It is pretty harsh treat-
ment to plant evergreens just as the heat
and drought of summer are setting in,
and then expect them to right-away
recuperate their mutilated roots enough
to sustain their thirsty bodies, many of
them will die first.

"VANDALISM! Vandalism!" "Sacrile-
ge, sacrilege!" and the like are epithets
I often hear from the lips of visitors who
catch me in the act of chopping down or
rooting out some choice or noble tree.
But it must be done. The moment one
tree encroaches upon another, one of
them has got to be cut down else both of
them will be spoiled, for it is far better
to have one perfect specimen than two
imperfect ones. But why plant your trees
so close to begin with? For two reasons:
First to give the place a full and furnished
appearance we plant the permanent trees
where we wish them to remain, and be-
tween these, as nurses and for temporary
effect we plant many supernumeraries
which shall be cut down as soon as their
services can be dispensed with. Second,
new trees and shrubs occur every year
and we must have them, and as we keep
no reserve grounds for such material we
are obliged to set them out in our already
filled plantations. We are always bring-
ing in and always throwing out.

THIS BRINGS me to to landscape archi-
tecture. Oh, how many sermons do I
read, what lashings we practical folks do
get, how we are battered and buffeted and
ridiculed in print! But mark you, ob-
serve how mighty little information our
would-be teachers deign to give us. Talk,
gush, balderdash by the volume, but ac-
tual, pointed, practical information how
to obtain the very pictures they hold up
to our imagination is, I presume, too
sacred to be given unto us. But, I often
think, as Moses isn't here now it's mighty
hard work won't to squeeze water out of
stone. At the same time we have archi-
tects who can and do construct perfect
landscape pictures, and who not only
know how to do it but also what materials
to use in doing it. Olmsted, Parsons, Vaux,
Miller and Bowditch are of this kind.

The Japanese Plums—The Satsuma.

Since I wrote of the Kelsey Japan plum,
Batankio (or Batankin, as some call it)
last month, I was so fortunate as to find
young trees of that most curious of fruits,
the Satsuma plum of Japan, or, as it is
now quite generally known, the Japan
Blood Plum, in fruit in the grounds of
the University of California at Berkeley.
The tree is a much stronger, smoother
grower than the Kelsey; leaves smoother
and more lanceolate, wide in the middle
and narrowing to each end; twigs stout,
long and smooth. The fruit is round
with a deep suture on one side; dark dull
red, with bloom, flesh dark, bright crim-

son or cherry red; skin very thin with no acerbity; flesh or pulp very fine grained, very juicy, abundant free blood red juice, when fully ripe melting and delicious. We may say first best in quality to eat from hand when fully ripe. The plum when first mature is quite firm and will prove a good long shipper. When over ripe becoming very soft, but still juicy, and not mushy. In size the plums examined were about the size of the native plum known as Miner, or about the size of the well known Green Gage, but it is said to grow much larger. Stem longer and more slender than that of the Kelsey which is very short and thick for a plum. The pit of the Satsuma is quite small for the size of the fruit, roundish, somewhat pitted and corrugated.

I am intensely interested in these plums. This Satsuma very closely resembles in tree, leaf and growth a plum tree sent east from California under the name Ogon, which proved quite hardy with me in Illinois in our severest winters, much more so than the Kelsey, and it may be that some of these fine fruits may do well in the great Northwest. Since I wrote of the Kelsey last month I had some of them stewed for sauce, and found them very nice served in that way.

Many young orchards in different parts of this state, of the Kelsey have fruited for the first time in quantity this year, and all report them very productive and profitable. The keeping qualities of these plums are truly remarkable. I have before me a very large specimen of the Kelsey gathered when fully mature one month ago yesterday. It is yet perfectly sound.

That the Kelsey is quite near to the peach in many of its peculiarities is plain to any one who will examine it critically. It has the stem and pit of the peach. The pit is corrugated, pitted and shaped like that of the peach, and the kernel has the same skin and flavor, and fully bears out the view that I had long ago formed from observation, namely: That we may expect, and that we now have, hybrids between nearly all the different species of the almond family, and that we may look for very valuable future results from such hybrids.

Hybridism brought about by skillful artificial means should be continually striven for, though we may have ten thousand failures for each success. Given our fully hardy native plums as a base—they lacking somewhat in self pollinization, making them easy to experiment with in this line—should give the northwest in time some good, fine hardy fruits.

The high mountain regions of Northern California has some fine native plums that may prove of value in this work. But it is best for those who work for the great northwest to stick pretty close to the wild plums of the northern part of that region. Some of them are really fine valuable fruits in their wild state, and capable of endless improvement.

The plums proper, those of the European type, are not proving as profitable in California as the other members of the almond family. They nearly all do finely and bear enormous crops of magnificent fruit, but are too acid when canned or dried, except the prune section. Of these the sweet raisin-like French prune, the Petit Prune de Agen is grown in great quantities, and is still being more largely planted than any other fruit. The tree is a strong, healthy, handsome grower, wonderfully productive; the fruit very sweet and easily dried into the prune of commerce. The crop is very regular and certain. An item before me gives the yield

of an orchard in Tulare county, only four years old, at 300 to 500 pounds to the tree. At the lowest price prunes have sold at on the tree this season, a cent and a quarter a pound, and at the lowest figure of product as given, to-wit; 300 pounds, we would have a net return from this orchard of \$375 an acre, and this in Tulare county, which twelve years ago was considered a worthless arid desert.

But give the exceeding rich soils of these so-called deserts a little good water from the mountains and we have at once the fruit growers and fruit tree and vine paradise, where nearly all the fruit bearing trees and plants will grow and thrive wonderfully, and where great commercial fruits such as the raisin grape, prune, peach, nectarine, apricot, fig and pear can be perfectly dried in the open air cheaper and better than any where else in the world where they can be grown with success. And this is not all. In the hot, dry, even morning air of the great Joaquin valley, but very few of the insect enemies so injurious to fruits can propagate, and none—yes, we may say none—of the destructive moulds, blights and rusts so destructive in moist climates can there exist. Sun dried fruit there, is as perfect from these reasons, as the very best evaporated fruit east.

But to bring water to these rich valley lands is very expensive, requiring a vast outlay of capital. But when once rightly brought, and of good quality, it is there for all time, insuring perfect crops every year. One buying a farm in the great valleys now, pays a certain price for his land, his climate and his rain-fall, or rather water for all time. This price may seem great in the start, but is it? I think if one will look this matter up very carefully that he will find an investment in Joaquin valley irrigated lands at the prices they can now be had for, a grandly good investment. If the soil is good and the water is good, so far as the soil is concerned we need trouble ourselves but little, for it is really all good. The waters of some of the rivers used for irrigation carry in solution too much alkali, which in time kills the land, rendering it unfit for most crops. The past month I gave the San Joaquin valley a pretty thorough looking over, directly after reading Prof. Hilgard's essay on "alkali."

Over 500,000 acres have just been reclaimed from the sway of the Jack rabbit in Merced county by the great Crocker and Heffman canal, costing a million and a half of dollars. This adds that amount of the very best of soils in one of the best fruit regions in the state, in a fine, healthy climate.

San Francisco, Cal.

The Seven Year Locust.

If your correspondent C. B. W. had been in the vicinity of Marengo, Ill., in 1871 and again the past summer, I think he would have been satisfied that although the 17-year chaps may not be relied on "to the minute," they come as near to it as any of the broods of insects that make annual visits. In the matter of details, however, he has not been altogether rightly informed. They do not come "in early spring," but after warm weather is fairly established. Neither do they wait for the trees to send out shoots and then "climb" to lay eggs. All the climbing they do is when they first leave the ground a wingless grub and climb upon a stalk, fence or tree and shed the skin, coming forth a perfect insect, and then they fly, and after flying a

few days the work of egg-laying begins. During their flying lives what a howl they do keep up. It is very wearisome and it is quite a relief when the last one is dead. The males alone sing. Although to-day, September 17, I can show you plenty of trees that at some distance look like dead trees, still I think the injury is comparatively little, for only the outer twigs, six inches or a foot in length are killed.

The nurseryman, however, dreads their approach, for eggs are laid in the upper part of the bodies of young nursery trees where they are as thick as the little finger or less, and the form of the tree is badly damaged. I believe nurserymen in this vicinity kept boys among the young trees to frighten away the pests. I believe the eggs do not remain unhatched seventeen years as stated, but hatch within a year, remaining in the ground in the larval state till the seventeenth year when they bore their way out from a great depth in the ground.

C. C. MILLER.

Your Spring Trade List.

Print your SPRING TRADE LIST in the AMERICAN FLORIST. It will cost you less money and do you more good than to print and mail your list yourself. We will print and mail your list, in the columns of this paper, to 5,000 buyers for much less than the postage alone would cost you. A full page in the FLORIST costs only \$42 for one insertion. It would cost you twice that sum to get up a list of your own and mail it to 5,000 addresses. Think it over! We can save you money and secure you better results at the same time, for the FLORIST is preserved while your trade list otherwise mailed would rarely be kept on file. We will print extra copies for you—from the type after being set—at a nominal rate if you wish extra ones to mail in response to requests. If half a page is large enough it will cost you but \$21 for the service.

APPLE MAGGOTS.—F. L. Harver, botanist and entomologist at the Experiment Station of the Maine State College, at Orano, Me., is desirous of obtaining information regarding the apple maggot which makes thread like channels through the fruit. Specimens are also solicited.

Osage Orange Hedge Plants.

The Victor Safe

Is the safe for Nurserymen and Florists, fire and burglar proof and the price so low that no business man can afford to be without one to protect valuable papers, books and money from theft or fire. In a florist's catalogue received a few days ago it was stated that he (the florist) had been robbed of his list of several thousand names of his customers by a former employe. This could not have occurred if he had kept the list in a Victor Safe. Price of No. 3 safe, large enough for most florists and nurserymen, \$40. Catalogue giving full information on application. Liberal offers to agents.

Fruits and Vegetables.

What is the difference between a vegetable and a fruit as the words are commonly used? Have the readers of the FLORIST ever thought of this question, and if so, I wonder how many can give a satisfactory answer?

I have asked several people the question hoping to receive some definite information, and the only answer that I receive is, that a fruit is a product of a plant containing seed, such as the grape, berries, peach, pear, apple, etc., and that a vegetable is the product of a plant used for culinary purposes.

These answers I deem insufficient, because, how then would you classify the tomato? Would it be a fruit when served uncooked and a vegetable when cooked? The same questions apply to the grape, berries, peach, pear and apple, which are all cooked or preserved. What class would the banana and pine apple (or other apparently seedless productions) belong to? Class for me the pea, bean and like seed bearing product now generally spoken of as vegetables. How about the radish, could it properly be classed as a vegetable according to the definition given? I have never known of it being cooked.

A little information on this subject would greatly relieve and oblige me.

CHAS. F. EVANS.

FINE ROSES.

We offer for sale to the trade this Fall a fine, healthy lot of out-door grown Roses; strong, 1 year old dormant plants on their own roots, including the following staple varieties and others:

Price, \$12.00 per 100; \$100.00 per 1000;

Viz: Gen'l Jacqueminot, Diesbach, Paul Neyron, Baron Bonstetten, Jules Margottin, Pierre Notting, Comtesse de Serenye, La Reine, Prince Camille de Rohan, Magna Charta, Marie Bauman, Fisher Holmes. Also, Gem of Prairies (always scarce) at \$12.50 per hundred.

N. B.—We carry a full line of Fruit and Ornamental Trees, Shrubbery, 2 year Roses, Clematis, etc.

SOCIETY OF AMERICAN FLORISTS.

JOHN N. MAY, Summit, N. J., president; W. J. PALMER, Buffalo, N. Y., vice president; WM. J. STEWART, 67 Bromfield St., Boston, Mass., secretary; M. A. HUNT, Terre Haute, Ind., treasurer. The fifth annual meeting at Buffalo, N. Y., August 20, 21, 22, 1889.

The Executive Committee.

Following are the names of the members of the executive committee of the S. A. F. for the present term:

Peter Henderson, New York City; Chas. D. Ball, Holmesburg, Pa.; J. D. Reynolds, Riverside, Ill.; R. J. Halliday, Baltimore, Md.; A. P. Calder, Boston, Mass.; J. M. Keller, Bay Ridge, N. Y.; A. E. Whittle, Albany, N. Y.; Frank Huntsman, Cincinnati, O.; J. T. Temple, Davenport, Iowa.

Nomenclature.

We print elsewhere in this issue the admirable paper on Nomenclature read before the New York meeting of the S. A. F. by Mr. Robt. J. Halliday, of Baltimore. As suggested by the essayist, a committee of twelve was appointed and if these gentlemen faithfully perform their labors great good to the whole trade must result.

Following are the names and addresses of the gentlemen composing the committee:

Robert J. Halliday, Baltimore, Md.; Chas. D. Ball, Holmesburg, Pa.; G. H. Leahy, West Grove, Pa.; Edwin Lonsdale, Chestnut Hill, Phila.; J. N. May, Summit, N. J.; C. B. Whitnall, Milwaukee, Wis.; Wm. R. Smith, Washington, D. C.; Robt. George, Painesville, O.; Robt. Craig, Philadelphia; A. E. Whittle, Albany, N. Y.; M. A. Hunt, Terre Haute, Ind.; Benj. Grey, Malden, Mass.

We wish to say to these gentlemen now that there is no time like the present to begin. Don't put it off or leave it all for one member to do. The eyes of the floriculturists of America are upon you and they expect thorough and careful work from each member of the committee.

NEW CANNAS—We call attention to Mr. Temple's article on new cannas in this issue. No plant has been recently improved to a greater extent than the canna, and Mr. Temple's trials have included all the best new sorts.

Coming Chrysanthemum Shows.

Philadelphia, November 13-16.
Boston, Mass., November 14-16.
New York, November 13-15.
Orange, N. J., November 7-9.
Indianapolis, Ind., November 13-17.
Baltimore, November 14-15.

A FEW of our subscribers get huffy because the FLORIST is not sent to them after their subscriptions have expired, and when they do get around to mailing their renewal interject such remarks as "Guess I am good for a dollar," "Needn't be afraid you won't get your dollar," etc. The gentlemen who pass in these remarks for our inspection may be financially capable of buying the whole office, but the point is not as to whether the subscriber is good for the amount or not. If these gentlemen had come to the conclusion that they did not want the paper any longer and we had continued sending it, would they pay for it when a bill was presented at the end of the year? Most assuredly not! They would be foolish if they did. How are we to know whether they wish to renew or not unless they advise us of the fact? By securing cash in advance for subscriptions we are relieved from the heavy expense of keeping many thousand book accounts, and have so much more money to expend in giving you a good paper. Many of our readers write us that the FLORIST is worth many times the price charged; we believe that it is worth all that we ask for it and that those who appreciate it and want it should be willing to order it and accompany the order with a dollar. We want all the subscribers we can get—in the trade—but only on above basis, and we are pleased to say that our list shows an increase each issue. The grand majority of the trade find it no effort to order their

renewal upon expiration, why should an exceedingly slim minority find it so difficult and feel aggrieved when the paper is stopped on account of their own oversight or negligence?

The Philadelphia Exhibition.

The fall show of the Pennsylvania Hort. Society opened on Tuesday evening, October 2. It was a fair average show and there were some fine examples of good culture, but for some unexplainable reason the people do not patronize these exhibitions as they deserve. Whether it is that the advertising department is not properly attended to, or, that the people are not sufficiently well educated to appreciate superior skill in the production of grand specimens of the endless varieties of plants, flowers and fruits I cannot say, but certain it is that the treasury does not show that amount of cash after these shows that it should.

The main features in these fall shows are the foliage plants: crotons, caladiums, marantas, ferns, lycopodiums, selaginellas and palms in great variety. The tuberous rooted begonias made a very attractive display and furnished nearly all the flowers that were in the hall, excepting, of course, the cut flowers, roses, etc.

The Kentia Forsteriana which was awarded first premium for the best specimen palm, occupied a prominent position in the main hall mounted on a pedestal. It was exhibited by William Joyce, gardener for Miss M. A. Baldwin, who also had the finest lot of well grown plants in the exhibition, taking them altogether. The greenhouses in which Mr. Joyce grows these plants are located on Chestnut street, near Eleventh, in the very heart of the built up part of the city. Mr. Joyce is over 60 years of age and has been an exhibitor almost continuously for nearly thirty years. He is, in fact, the oldest living exhibitor belonging to the society who is taking an active interest in its workings at the present time. Mr. Joyce declares this is his last year for exhibiting. His plea is that he is getting too old. To look at his plants and examine the premium list there is no evidence of his age, and especially when we consider the adverse circumstances under which his plants are grown. What would a fall show be without William Joyce? It is to be hoped that he will reconsider his determination and be prevailed upon to continue bringing his premium winning collections and specimens for many years to come. The kentia above referred to was a grand specimen, the largest of the kind in Philadelphia. It is somewhat difficult to realize, when looking upon this large and graceful palm, that only a few years ago it was received by Mr. Joyce in a

cigar box. The lycopodiums and selagiellae are always an especial feature in Miss Baldwin's exhibits, they were a very uniform lot. A plant of *Nepenthes Hookeri* with its "pitchers" gracefully depending from the tips of the leaves excited much curiosity. A bystander facetiously remarked that a good many of the pitchers would hold a quart.

Hugh Graham's Son was awarded second premium for 25 ornamental foliage plants, in florists class. Robert Wark, gardener to Clarence H. Clark, Esq., had a pair of very symmetrical plants of *Araucaria excelsa glauca* (Norfolk Island pine). These are very useful for cool conservatory decoration. The drawback to their being used more generally is their cost. Thomas Long, gardener to A. J. Drexel, Esq., had a rare collection of palms; one, *Livistona altissima*, was much admired both by the ladies and florists. If it could be had in quantity and cheap there would be a demand for it as a window plant. It might be described as a miniature compact though graceful form of *Latania borbonica* (*Livistona chinensis*).

So well pleased were the judges with William Joyce's collection of 15 decorative plants that they awarded a special premium of \$10 in addition to the first, \$20.

Hugh Graham's Son carried off first premium for 12 crotons, also for specimen plant (croton). There were three entries for 25 palms, which, in addition to palms forming a part in the collections in competition in the decorative and ornamental (?) classes were quite plentiful. One mammoth specimen of *Cycas circinalis* was too large and heavy to be taken into the hall, so it occupied a position in the vestibule. It came from the conservatory of C. H. Clark, Esq. It is said to be the largest plant of the kind in this country. Pennock Bros. had a very large and perfect specimen plant of *Latania borbonica*; this occupied a pedestal in a prominent position which added greatly to the general appearance of the building.

Caladiums were exhibited by William Joyce, H. A. Dreer and John M. Hughes, gardener to George W. Childs, Esq. Those from "Wootton" occupied most of the space on the left hand side of the hall. There were over thirty plants, they comprised the best of the old varieties as well as some of the newer ones.

C. D. Ball, H. A. Dreer and R. Wark each exhibited collections of 25 ferns and a very interesting feature they proved to be. In Mr. Ball's lot were good specimens of *gleichenia*, and *Adiantum decorum* looked as though it would make a useful one for cutting purposes. There were three fine plants of *Davallia Fijensis* in as many different collections, a pretty good evidence of its value as an exhibition plant. Mr. Ball was awarded first premium, H. A. Dreer second, and Robert Wark third. Marantas were as much admired as ever. Mr. Joyce took first for six plants, Hugh Graham's Son second. For specimen maranta the order of the awards was reversed. A specimen *Allamanda Schottii*, exhibited by Wm. Frederick, gardener to W. W. Frazier, Jenkintown, was in fine bloom, and gave the only dash of yellow to be seen in the show.

Aquatic plants occupied a position near the stage in a large square tank. There were the pretty blue *Nymphaea zanzibariensis*, the deep pink *N. devoniensis*, and Egyptian lotus *Nelumbium speciosum*; foliage, flowers and seed pods formed the background, also the variety with white

flowers striped with pink. H. A. Dreer, the exhibitor, was awarded a special premium, \$15. Robert Bancroft, who represents the Haddon Floral Houses, of New Jersey, had a little tank filled with *Pontederia crassipes* which attracted much attention.

There was only one exhibit of asters in pots and these were below the standard. The Philadelphia florists ought to do better than that. A good display of asters would have helped the begonias in furnishing color to make the hall more cheerful, relieving the predominating masses of green. Oscar R. Krienberg received first premium for a large and varied collection of pansy blossoms, which were nicely arranged with wild fern fronds. The same exhibitor also had some flowers of *Cosmos hybridus*. Allan Barr was awarded first premium for the only collection of wild flowers. Many of the visitors were of the opinion that first honors should have been withheld, because not one of the specimens were named. It looks as though the judges exceeded their duties by awarding a first premium where the exhibit was not according to conditions and regulations.

The cut roses, as usual, attracted their full share of attention. C. Ramsden's 12 "The Gem" were in good shape, so also were Coles & Whiteley's *Perle des Jardins*. Craig & Bro's American Beauties and Edwin Lonsdale's Mad. Cusins held their own as among the best roses grown. Considering the earliness of the season there were some very creditable "buds" among them. Pennock Bros. took all first premiums in the classes for florists. The other florists of this city deserve a vote of censure for not exhibiting in the above classes.

Dreer's cut gloxinias, verbenas, petunias, dahlias, etc. occupied a good deal of space and made a good display. Mrs. E. D. Demaris also had a collection of dahlias and a pair of hanging baskets for which was received first premium. O. R. Krienberg had quite a number of cut single dahlias, but they are not nearly so perfect and fine as when forced under glass in early spring. Heron & Nisbet's basket of *La France* was awarded a special premium of \$5 which was well deserved. It contained some good blooms and was attractively put together. Pennock Bros. were awarded a special of \$10 for a large and pretty table design. Hugh Graham's Son constructed a large mound of fruits: bananas, grapes, pears, etc.

Although cut flowers attract more attention at these fall shows than palms, caladiums, crotons, etc., yet after the first night they are generally a disgrace to the place. The foyer is generally set aside for the purpose of displaying cut flowers, fruits and vegetables, but it would be to the society's (or those who have these matters in charge) credit to close the doors after the first night. One of the officers expressed himself that in his opinion the exhibitors themselves should have sufficient pride in their own exhibit to renew the flowers from time to time as required, to keep them looking fresh until the close of the show. But when we turn to the schedule of premiums we find there the munificent sum of \$2 offered for the first premium for 12 *Perles*, *Bennetts*, etc. as the case may be, and \$1 offered as the second premium; no third premium is offered. The first premium might induce the lucky recipient to keep his exhibit fresh, but there is very little inducement for he who gets no premium at all to keep his flowers in good condition. If the society

was to offer premiums in the cut flower classes every day, that would have the desired effect, and until the society adopts some such liberal policy, there will be the same complaints among the society's patrons as now. It seems strange that this plan has not been adopted before. After the first day there is nothing left for the daily papers to say to keep up the necessary amount of interest for the people to have a desire to visit the show.

E. L.

Massachusetts Horticultural Society.

The sixtieth annual exhibition of the Mass. Hort. society was held at Boston, Sept. 18 to 21. As to plants and flowers it did not compare favorably with corresponding exhibitions in former years, and was in many respects a disappointment, although this was not entirely unexpected.

Several of the leading exhibitors of recent years were conspicuous by their absence, and had it not been for Mr. Manda who arrived opportunely on the second day with a fine collection of cypripediums, oncidiums, etc., the orchid family, which has now become such a potent attraction in floral exhibitions, would have been represented by but one individual, a solitary plant of *Vanda cœrulea*. Mr. Manda's display was most creditable. Very large plants could hardly be expected when it is considered that these had to be brought over 250 miles, but many varieties quite rare were included and all the plants looked neat and healthy. There were forty varieties of cypripediums, the special gem being the rare *C. Sanderiana*.

One of the best plants of the collection was *Lælia elegans prasiata*. There was also a fine specimen of *Catasetum Bunge-rothii*, and a good assortment of oncidiums and odontoglossums. The *Odontoglossum grande* of course received the usual share of attention as the "Baby Orchid."

One of the best grown plants ever seen here was the magnificent specimen of *Nepenthes bicalcarata* suspended in the center of the hall. It was grown by Geo. McWilliam; gardener to Mrs. J. Lasell, and well merited the silver medal which was awarded to it.

Perhaps the most graceful plant in the hall was a perfect specimen of *Aralia Chahrieri*, eight feet high, from Wm. Martin, gardener to H. P. Kidder. Mr. Martin also made a good display of alocasias, crotons, marantas, anthuriums, dracænas and caladiums. His *Anthurium Ferrierense* received first premium for "specimen flowering plant," and his adiantums and other ferns were all well grown. Among the latter was an unusually fine plant of *Davallia Mooreana*. The first prize for specimen variegated plant was given to Thos. Clark for *Ficus elastica variegata*. The old question of what constitutes a variegated plant was disputed as vigorously as ever, and probably will continue to be. The society should define just what it considers as a variegation, otherwise it would be preferable to omit this class from the schedule entirely. Thos. Clark's crotons and dracænas were good, and being very large plants made a most effective and striking group. The whole collection was bought by Mr. Manda after the exhibition had closed.

The largest plants in the hall came from J. H. White of Brookline; among them were magnificent plants of *Cycas revoluta* and *Cycas circinalis*, both superbly furnished. Of equal merit was a splendid *Dasyllirion acrotichum* shown by James Comley.

From the Harvard Botanic Garden

FOUNTAIN AT THE AMERICAN INSTITUTE FAIR, NEW YORK.

came a large collection of economic and medicinal plants, which if there had been a prize offered for crookedness would have been well entitled to that honor, but which were nevertheless very interesting to those who stopped to read the cards attached to each, descriptive of their history and uses.

W. C. Strong, J. A. DeMar and F. L. Temple showed a large number of evergreens in pots, which served to make the vestibules and stairways attractive. Among Mr. Temple's plants were several large specimens of the "Umbrella Pine" (*Sciadopitys verticillata*). It would be impossible to exaggerate the delicate gracefulness of the new weeping lilacs exhibited by Mr. Temple. The arrangement of the foliage on the pendant branches is like that of no other plant and when seen outlined against a light background produces a most beautiful effect. A new golden hop tree (*Ptelea trifoliata aurea*) shown by J. A. DeMar was much admired and will probably prove a valuable addition to our hardy variegated trees.

The display of cut flowers was very meagre. Norton Bros. contributed a group of cut roses including some fine blooms of Mme. de Watteville. These were all the roses shown. L. W. Goodell staged some excellent asters, Phlox Drummondii and pansies, also had a large tank of aquatics. Some good dahlias were shown by E. Sheppard & Son and others.

Mr. Martin, Geo. McWilliam and J. H. White all competed sharply for the premiums in the tender grape section, and there were some fine clusters of Muscat, Alicante, Fabiana, Sweetwater, Hamburg and other favorite kinds.

The fruit and vegetable display was very complete. This might be expected, however, as the inducements in the way of premiums to these exhibitors are entirely out of proportion to those offered in the plant and cut flower departments.

For instance, we see in looking through the schedule for this year that the premiums for the year for onions exceed those for ericas; more is offered for Baldwin apples than for palms and cycads; more for tomatoes than for tender roses, yet the latter must be renewed every day while the show lasts; more for cabbages than for flowering stove plants; more for radishes than for pansies; more for peppers than for carnations, and the prizes for pears exceed the combined premiums for the year for orchids, ferns and lycopods and azaleas both hardy and tender. It is an easy matter for the large market gardeners, who abound here, to go through their acres of cabbages or tomatoes, or orchards of apple and pear trees and select a dozen or two fine specimens, the only extra labor involved being the delivery of the same to the exhibition hall; then as a rule they all dispose of their exhibits at high figures as soon as the show closes.

With plants it is a different matter. A large and continuous outlay in money, time and labor is required to produce plants for exhibition purposes, and even the transportation to and from the hall is no small matter. Money in itself may be no object to some plant exhibitors, but, nevertheless, as it is the plants and rare flowers which attract visitors to exhibitions where an admission fee is charged, the plant exhibitors naturally feel the discrimination, and seek a readjustment, even though the market stuff should suffer in consequence. For the man who produces a new and improved cabbage, a superior grape, or a better potato than we now have no encouragement is too great, but it certainly is difficult to see any gain to the world horticulturally or economically in the continuous offering of money prizes for varieties of vegetables which in many cases are as old as their exhibitor, which nobody cares to look at, and which were grown as well twenty years ago as they ever can be.

The Mass. society is not alone in its present experience. Other institutions of its kind have within the past few years had to face vital questions growing out of the grand awakening and robust growth of floricultural industry. That there is dissatisfaction here is plain. Visitors from a distance see it and remark it, and it were folly to shut our own eyes. This part of the country is rich in material, and does not lack the men who if once interested can produce exhibitions worthy of the name and fame of the Mass. Hort. society. They have given grand exhibitions in the past and can do still better in the time to come, but first there are inequalities which should be corrected, and a new policy which shall be abreast of, even in advance of, the times, should be inaugurated.

It is well to remember that the private gentlemen who will force their gardeners to exhibit against their will and inclination are few and far between. The co-operation of the humblest member is not to be despised, and where the rank and file feel a personal interest and pride there is success assured. It is the sincere hope of all true lovers of horticulture in its noblest department, that this society will master those problems which have brought such disaster to other similar organizations.

NOTES.

Mr. F. Sander of London and his American agent Mr. Forsterman, Mr. Low of London and Mr. Wm. Grey of Albany, were among the prominent visitors at the exhibition.

A curiosity in the shape of a mammoth bunch of the fruit of *Latania borbonica* was received on the last day of the show from Robt. Cristie of Newport.

The cucumbers grown under glass by Jas. Dillon of Forest Hills, were remarkably fine specimens.

Mrs. P. D. Richards who makes such interesting exhibits of wild flowers has discovered a treasure in the shape of a pink variety of *Lobelia cardinalis*.

W. J. STEWART.

Fountain at the American Institute Fair, N. Y.

The center pyramid of the fountain is composed of rocks and sarracenias, hundreds of these plants being fastened among the stones. There is a fine collection of palms and foliage plants around the circle of the fountain and the vases are most tastefully filled. Wm. C. Wilson arranged the fountain which is a fine feature of the fair.

F. A. B.

New York Notes and Comments.

Mr. John Henderson, of Flushing, has sold his nurseries to a stock company; in future it will be the John Henderson Company. The genial and popular Chas. Anderson will continue to act as manager. Mr. Henderson is a shareholder in the new company, though giving up active part in its management. One of the large stockholders is a prominent dry goods man.

Mr. William Elliott has been quite ill lately, suffering from an unusually elaborate form of malaria. He is now recovering, but expects to subsist chiefly on quinine for some time to come.

That troublesome surplus still bothers the Florists' Club. It will not continue to be a cause of anxiety, though, if the suggested dinner is decided upon. But a good many feel that the club has not the

right to spend this money in such a way. As some very sensible members say, it would be the most business-like plan to divide it pro rata and return to the men who contributed to the entertainment fund, since the money was not given to the club itself, but contributed for a special purpose. Still another suggestion is that it should be expended in purchasing a square meal for those who couldn't get anything to eat on that memorable excursion. Another suggested use was that of providing permanent rooms for the club. Mr. Mayspoke of the excellent quarters of the Boston Florists' Club, where members may meet their friends or spend a quiet evening at any time. Mr. May spoke of the convenience of such a meeting place to the assistants in city flower stores. Mr. Thorpe also spoke of the many advantages to be derived from a permanent home for the club. Mr. Elliott and Mr. Cowan spoke eloquently of the necessity for prudence in disbursements; the fact that the treasury contained a comfortable surplus should add to the stability of the society.

It was felt that the florists of the city and vicinity should express their deep regret over the untimely death of Mr. Court; on behalf of the club Mr. Cowan prepared some simple and touching resolutions which are to be forwarded to Messrs. Veitch. Reference was made to Mr. Court's many estimable qualities as a man, as well as his accomplishments as a horticulturist, and there is no doubt that the sorrow expressed on this occasion will be echoed by all who knew him.

Mr. Messeburg, who has just returned from Europe, was asked to give his impressions, but declined. Mr. Keller, who has also been abroad, has promised some remarks on European horticulture at the next meeting. Mr. Spaulding says his impressions of Paris were rather moist; he spent forty days in that city, and it rained thirty of them.

Messrs. F. Sander & Co. held their great auction sale October 16. It was a success; most of the great orchid fanciers were there to give zest to the buying, and the average prices were good. The highest price realized for a single plant was \$230, which was obtained for a fine specimen of *Vanda Sanderiana*, said by many to be finer than the *Morgan* plant. It was purchased by Messrs. Pitcher & Manda. The same buyers secured a wonderful specimen of *Cypripedium Boxallii atratum*, said to be the finest plant of this variety in existence. It sold for \$160. The list of cypripeds at this sale was remarkable for rarity and excellence. A plant of *C. Godseffianum* sold for \$110. This is a novel hybrid, cross between *C. hirsutissimum* and *C. Boxallii*, described as very rich in coloring and marking. Another expensive luxury in the form of a cypriped was Philbrick's variety of *C. Chantini*, which was sold for \$150. Another mite of a cypriped, *C. Horneanum*, was sold for \$95. Others ranged from \$70 down. The sale is said to have amounted to something over \$8,000, and the general impression given is that orchid fancying is not by any means on the wane. A mass of *Laelia albidula bella*, said to be the finest specimen in existence, was sold for \$52.50; considered an inadequate price. A specimen of *Laelia anceps alba* sold for \$125; it was a large mass with 280 bulbs.

A bunch of fine flowers, including a very handsome spike of *Vanda carulea*, was brought from Rochester by George Savage, to give the uninitiated some idea of what orchids could do. A good many

noted growers, amateur and professional were present at this sale, and the event may be regarded as a brilliant success.

EMILY LOUISE TAPLIN.

Roses in the Open Ground.

I have been asked by many people this fall as to the cause of so many varieties of roses, tea, Bourbon, China, and H. P's, failing to grow this year. In fact a great many varieties that a few years ago grew well and made fine plants are more unsatisfactory every year, and this season a great many have died with some growers, and in no place that I have seen this year are they at all satisfactory taken as a whole.

The cause for this seems wrapped in mystery. Some probably will say it is due to lack of constitution from continued forcing, but one of the worst cases I have seen this year was a lot of *Hermosa*, nice thrifty plants imported from France last fall, and planted out in the spring in the usual way; where such plants would formerly make strong, vigorous growth from two to four feet high, many of these are no larger than when planted, and this is not an isolated case with this variety. I have seen several that are not much better, and some on new soil where probably a rose has not been planted in twenty years, if ever, before. It is not the fault of soil either, because in the same locality and on same class of soil a few years ago almost any kind of roses grew very finely. To prove that it is not due to forcing I prepared last fall a piece of ground (about one and a half acres) by trenching it two feet deep and giving it a good dressing of manure. This spring I planted the whole with roses, some of every variety I had in stock, and considered worth growing. Among these were several hundred imported plants which had never been forced, and fully 75 per cent. of these are no better today than my own growing from forced plants. Out of all these varieties of tea, Bourbon and China's tried, only about fifteen sorts have made anything like satisfactory growth, and of the hybrid remontant class only about the same number of varieties have grown at all satisfactorily. In another piece of ground of nearly the same size, not trenched but well manured, and plowed deep, I planted several thousand young spring struck plants of all the best kinds. Of these 70 to 75 per cent. only have grown fairly well. This lot is on an old piece of sod ground that has never had a rose grown on it before.

As far as I can judge from my own experience and that of others, the worst ones to do well are *Perle des Jardins*, *American Beauty*, *Puritan*, *Princess Beatrice*, *Bennett*, *Souv. de Gabriel Drevet*, *Countess of Pembroke*, *Princess de Hohenzollern* and *Countess de Figueuse*. With me the most satisfactory varieties are *Princess de Radziwell*, *Mme. Joseph Schwartz*, *Duchess de Brabant*, *Marie Guillot*, *Agrippina*, *Mme. Scipion Cochet*, *Pierre Guillot*, *Susanne Blanchet*, *Malmaison*, *Papa Gontier*, *Marie Van Houtte*, *Edmund de Biazaut*, *Souv. of*

Wootton, *Annie Cook*, *Meteor*, *Coquette de Lyon* and *Bon Silene*. They are named in order of their respective value for freedom of growth and continuous blooming qualities. In some of the past dry seasons some claimed the dry weather was to blame, but that certainly cannot have been the cause this season, for with the exception of the month of June we have had a superabundance of rain the whole season.

It would be interesting to many growers in the east, particularly around New York and Philadelphia, if growers in other sections of the country would give the result of their experience in this line. I would add that the list of varieties given as doing very badly and those as doing fairly well are based on trials with fine vigorous young plants, planted from 3-inch pots, the first week in May. A few year-old plants of some of these varieties have done well.

JOHN N. MAY.

Summit, N. J., Oct. 18.

Rose Primrose Dame.

EDITOR AM. FLORIST:—Your correspondent "E," page 82, October 1 issue, must have misunderstood what I said about *Primrose Dame*.

The statement made by me at the New York meeting was in substance, that I considered it one of the best roses of the last two years, and that while I would not recommend it for commercial purposes, it was a very valuable rose for any one to grow who had a retail trade.

I do not remember that I stated why it would not stand the test "E" refers to, i. e., for commercial use, but it is because the stem is not strong enough for the bloom, when used as a long-stemmed cut flower. But for the small grower who makes up more or less work, I do not know of a more profitable rose.

M. A. HUNT.

French Roses.

The *London Garden* is after the French rosarians. Listen to what it says about the new rose *Madame Andre Duron* (*Bonnaire*, 1887).

Some half dozen plants of this new rose, which was sent out last November as a hybrid tea, are now blooming freely, and as far as can be judged from the form and color of the numerous flowers, the foliage, growth and general appearance of the plant, the variety differs in no respect from the old *Bourbon*, *Sir Joseph Paxton*.

Does not this bear out what Mr. Antoine Wintzer said at the convention last August in New York? The only difference is, Mr. Wintzer said this same rose was identical with the old *Bourbon*, *Appoline*. Can more light be thrown on this subject? It would interest many of us small florists who can only afford to buy a few varieties each year. We need protection.

Z.

Rose Mme. Gabriel Luizet.

This beautiful hybrid has become deservedly popular as a cut flower rose and is now largely forced for bloom, especially around Philadelphia. The large pink blooms are borne on stout stems with handsome foliage, making it most desirable to meet the present demand for these characteristics in a cut flower rose.

Our illustration shows a vase of these roses grown by Mr. Edwin Lonsdale, Chestnut Hill, Philadelphia, to whom we are indebted for the photograph from which the engraving is made. We would also call attention to the arrangement of the roses which we consider most excellent and worthy of study.

VASE OF MME. GABRIEL LUIZET ROSES.

PERMANENT BEDS AND RAISED BENCHES.—Will some one of our experienced rose growers tell me why the old system of growing tea roses in permanent beds was abandoned and the new one of growing them almost entirely on raised benches adopted. I think that Mermets, Brides, Bou Silenes and even Perles would give good results by the old system if the borders or beds were well drained. J.

WHAT IS THE MATTER with our bench of roses? They drop their leaves before they should, particularly the Brides. They are pretty free from red spider, but have a little mildew on them, for which I have dusted them with sulphur and "grape dust." They were benched in July. I keep the temperature of the house now 55° at night, 65° during the day, admitting air on all favorable occasions, syringing them well on sunny

days and letting them alone on dull days. What is the best remedy for mildew?

FLORIST.

SEEDLING DAHLIA.—Edward Morat, Louisville, Ky., sends us specimen blooms of his seedling dahlia. The flowers are a light yellow in color, double, about three inches in diameter and symmetrical in form. Mr. Morat states that it is dwarf in habit and the most prolific

bloomer he has ever seen, the flowers coming invariably perfect in form. The color is a desirable cue and if its free blooming qualities are not over-rated it should prove of value to the trade.

Notes on Sander's Sale
at New York.

BY WM. FALCONER.

THE CATALOGUE contained 1,060 lots, and although Elliott tried his best he couldn't sell them all in one day. Forty-two genera were represented. The hybrid cypripediums were the feature of the sale. But although a large number of plants were offered there was not a correspondingly large assortment of popular serviceable orchids. Among the orchids offered were 26 species and a few varieties of cattleyas; 13 species and a few varieties of odontoglossums; 53 kinds, including species, varieties, crosses and hybrids, of cypripediums; 19 species of dendrobiums; 12 of oncidiums; 5 of ærides; 6 species and one variety of phalænopsis, and 4 species of vandas.

WHAT A GLOW of satisfaction suffused the warm countenance of Sander as on a chair he sat and smoked and listened to the appealing, coaxing, bluffing voice of Elliott extracting dollars where sometimes quarters might suffice.

ANOTHER SANDWICH, please. Why, man, are you crazy? This is not Pharaoh's storehouse nor Hutch's corner. Don't you know that bread has ris?

ALTHOUGH Henry Siebrecht has thousands upon thousands of orchids at home and which he wishes to sell, he can't resist the temptation of patronizing other folks' sales, and if he wants a plant you'll have to pay the piper if you can buy it over his bid.

JOHN THORPE was buying orchids for some of his customers.

GEORGE SAVAGE came from Rochester and brought a box of orchid blossoms to tempt our souls and set our hearts a-yearning to produce as good. After viewing a splendid spike of *Vanda cærulea*, that most glorious of all vandas, no wonder Arnold should pay \$55 for a plant. And the bunch of golden oncidium blossoms gave a mighty impetus to the sale of *O. varicosum* and *Rogersii*.

FRIEND LOCKWOOD brought spicy posies of lovely carnations for the young ladies.

"REALLY I hardly know where to put them, we are crowded full now. But we are building more greenhouses as fast as the carpenters can get them put together," said Mr. Manda to me at the sale. And still he spent more money there than did anybody else.

CYPRIPEDIUM DRURYI.—A distinct yellowish flowering East Indian species. "The finest specimen in existence," to Mr. Smith of Lee for \$50.

CYPRIPEDIUM CHANTINI, (Philbrick's variety).—In the way of *C. insigne* Maulei but very much finer, and this variety is one of the finest. This specimen was a large vigorous plant in a 12-inch pot, and Pitcher & Manda paid \$150 for it.

CYPRIPEDIUM GRANDE.—A hybrid raised by Seden at Veitch's nurseries, London, from *C. Roezlei* (the seed bearing parent) and *C. caudatum* (the pollen-bearing parent), both S. American species. It is an extremely vigorous grower. Arnold bought a fine plant for \$45. At the Morgan auction sale in New York three years ago Sander bought a plant of this orchid for \$170.

CYPRIPEDIUM ALBO PURPUREUM.—A very handsome rosy-colored orchid raised by Seden at Veitch's. Its parents were *C. Schlimi* (the seed-bearing) and *C. Domini* (the pollen-bearing). Pitcher & Manda bought a handsome plant in a 10-inch pot for \$70. At the Morgan sale Veitch bought a plant of the same kind, but not so good a specimen for \$120.

CYPRIPEDIUM GODEFROYÆ.—A little gem in the way of *C. nivium* and *C. concolor*. Introduced from Cochin China in 1880 by M. Godefroy Lebeuf, whose collector found it in the region of Laos "growing on limestone rocks on the east side of a mountain, where until about 10 o'clock in the morning it is in the shade, but where after that time and until night it is thoroughly exposed to the intense heat of the unbroken rays of a tropical sun." It first flowered in cultivation in November 1883, and was exhibited for the first time at the orchid exhibition held at South Kensington, London, May 12-13, 1885. McFadden, of Cincinnati, bought a handsome specimen for \$35. Sander bought a plant of it at the Morgan sale three years ago for \$130.

CATLEYA LABIATA is a popular orchid in any form, but some of its varieties are highly appreciated. Henry Siebrecht gave \$37 for a small plant with one new growth and a few old stems of the true autumn blooming variety of it, and carried it home in a paper bag under his arm. Manda gave \$45 for another plant of about the same size, but considered a finer variety. At the Morgan sale Kimball, of Rochester, paid \$160 for a pretty good plant of this species.

CATLEYA BOWRINGIANA is a recently introduced species "a native of Guatemala, where it is found growing luxuriantly on the bare rocks, enjoying full sun the greater part of the year. It is one of the finest introductions of late years. Its blossoms are very beautiful, fifteen of them being often borne on a single spike and that during the winter months. The sepals and petals are mauve tinted rose, the lip being of a rich crimson and the throat yellow." Within a year or two large quantities of this orchid have been imported, and Sander offered many of them at his sale. But the prices did not run high. Graham of Philadelphia, bought a splendid specimen about two feet square for \$80, and several of us bought small but good plants from \$13 to \$25.

VANDA SANDERIANA.—A magnificent showy species and "a native of Mindanao, one of the southern Philippine Islands, where it is found growing on the branches of trees in slightly shaded localities and blooming in the month of October." According to Sander "it grows high up on old trees, perched upright between the branches, in situations which are not shady." It was first imported into Europe by Sander, then by Low. In the *English Garden*, February 9, 1884, is a figure and colored plate of the first plant that flowered in England. A full page illustration is given page 441 of the *Gardeners' Chronicle* 1883. A double plate (532) occurs in the *Illustra-*

tion Horticole, 1884. When first introduced to Europe the late Mrs. Morgan, of New York, bought what was considered to be the finest specimen of it in cultivation for \$2,000. At the auction sale of her orchids it was bought by Siebrecht & Wadley, of New York, for \$900, the highest price, I believe, ever paid at auction for an orchid in America. They immediately sold it to Mr. Osborn, a private gentleman at Mamaroneck for \$1,000. After Mr. Osborn's decease his plants were sold, and Siebrecht & Wadley again became the possessors of this now famous specimen, but at a price about one half of what they paid for it at the Morgan sale. At Sander's sale the other day a very fine specimen with four growths about 16 or 18 inches high and in a cabin-basket some 12 inches square, was bought by Pitcher & Manda for \$230. Another specimen, taller and in bloom, but having only one growth was sold to Mr. Eyerman, of Pittsburg, Pa., for \$70.

BIG PRICES.—I don't mind paying a big price for a vigorous, well-rooted plant which has a good chance of pulling through with rough treatment, but for a tiny morsel of the rarest gem and which would require much careful attention to bring it on at all, I certainly should hesitate to pay a big price. Even take common stock—cattleyas, odontoglossums or oncidiums, a strong, sound plant is worth a good price but puny little things are not worth buying at any price. But "well-rooted" as regards orchids requires qualifying: Some of our best orchidists would almost as soon have a thoroughly sound freshly imported orchid—a cattleya torn from the branch of a tree, for instance, as one that had been established in a greenhouse.

A CONTRAST.—"Andy" held up to our admiring eyes a little plant of *Cypripedium Godseffianum*, in a 4-inch pot and Arnold bought it for \$110; he again lifted to our gaze another hybrid gem, namely, *Cypripedium Horneanum*, in a 3½-inch pot, and Manda claimed it for \$95. Then a couple of men declared they were unable to carry to the front a specimen of *Cattleya Mossiæ* which reposed bouquet-fashion in the mouth of a big barrel, and was the largest mass of a cattleya of any kind I ever saw; but Manda got it for \$45.

New French Cannas.

Passing along the streets and boulevards in the suburbs of most cities one tires of the stereotyped round scarlet geranium bed with its border of white, or the mound of red coleus dotted with yellow as seen on nearly every lawn. They are pretty, but the sameness is trying to the eye. Instead of planting something sweet-scented or with handsome foliage and pleasing but cooling to the eye, near the house, in most cases the glaring geraniums occupy that position, and the effect on a hot July day is as irritating to the eye as a red shawl to a turkey gobbler.

Among the many handsome plants suitable for the lawn none are more satisfactory or will create such a furor when seen as the new types of cannas raised by Crozy of France, and Fewkes and Heffron of this country. With beautiful foliage and lovely flowers about the size of a gladiolus and of almost every shade of red or yellow, a bed of them properly planted as to height and color, is an ornament to the finest lawn, as the beautiful leaves and flowers are produced as profusely as with geraniums, from June until October, if the old flower stalks are re-

moved when unsightly. The habit of the plant gives a tropical effect planted either in circular beds or as a background for other plants.

Their culture is simple. Divide and start in pots about March 1, and plant out about May 15 to 20, in very rich soil with an abundance of water from July 1 to Sept. 1. During that period they cannot receive too much water, provided it

a peculiar orange red shading to salmon. For a circle around these use *B. Cousaneat*, height five to six feet, foliage green, flowers orange scarlet. For a third row use *Florifere*, five feet high, flowers lemon yellow spotted with maroon. Fourth, plant *Lapeute*, four and one-half to five feet, peculiar dark stalks and green foliage, flowers a most brilliant crimson. Fifth, *Emile Leclerc*, three and one-half to four feet, flowers orange yellow spotted crimson, (extra fine). Sixth, *Adolph Weick*, three feet, flowers cardinal red borne in great profusion. The last variety and *Emile Leclerc* planted in August in 8 and 10-inch pots make grand companion plants for the calla for decorative work at Christmas and Easter. For the

The Lapageria.

It would be only waste of space to write much on the two most beautiful climbers that are flowering at the present season—*Lapageria rosea* and *alba*—as they are now seen in many greenhouses, and their culture, once considered difficult, is thoroughly mastered. Since the colored plate of *L. rosea* appeared in the *Garden* of October 26, 1878, the culture of the *lapageria* has extended on all sides. Its merits as a beautiful climber for the greenhouse have been fully recognized, and besides the type we have now other varieties of it, such as the noble *Nash Court lapageria*, or *L. rosea superba*, which bears a profusion of

WREATH OF LAPAGERIA ROSEA.

is not too cold. Take up in the fall, cut tops off about one foot from the roots and store in dry soil in a warm cellar. They will bloom all winter if taken up before frost and planted in the greenhouse or conservatory. Some of the flowers are as finely marked as orchids, and valuable for cut flower work, as they keep well if carefully handled.

Experience has taught that they make a stronger growth the following season if kept growing some during the winter, as cutting off all the foliage of the flowering varieties seems to enfeeble them somewhat. For instance, two *Ehemanni* cannas growing side by side, one taken up and foliage all cut off, grew five feet high, while the other one kept growing in greenhouse with part of the foliage removed, bloomed all winter and made a growth when planted out in same soil at a distance of four feet from the other, of over eight feet in height.

The best size for a circular bed to plant the new cannas in, is of ten to twelve feet in diameter, made perfectly level, a little below the surface of the surrounding soil, so that the water will not run off as it would do if raised. If the bed is larger than ten or twelve feet in diameter it will look squat, and if smaller it will look too high. A well grown canna is an addition to any kind of architecture, planted at side and close to base of front steps leading to porch or veranda.

For the center of bed or the back row, plant *Infant* which grows to a height of six feet, foliage purplish bronze, flowers

seventh row plant *Tonkin* or *General Boulanger*, very dwarf, flowers yellow splashed carmine.

Of other blooming cannas equally good are *Ehemanni*, eight feet and *Noutouni*, seven feet with banana-like foliage; the first with carmine lake, and the second with cardinal red flowers, both with flower-stalks rather spreading than upright; *Gladiaeflora*, six feet, flowers salmon; *Revol-Massot*, five feet, scarlet; *Flamboyant*, seven feet, flowers salmon, foliage purple; *Safrano*, apparently identical with *Gladiaeflora*; *Bebe*, dwarf, lemon-yellow, spotted red; *Henri Martin*, cardinal shading to pink; *Strelitziaefolia*, handsome foliage; *M. Ferrand*, purple foliage; *Paul Bert*, crimson red; *J. Metral*, red shading to majenta; *Brilliantissima*, extra fine purple foliage; *Cardinalis*; *Bethal*; *Brilliant*; *Multiflora*; *Leon de Saint-Jean* and *Roseaflora*.

These new cannas are also valuable to the florist as plants for room and other decorations; their handsome foliage and bright flowers make them very useful for such work. After being grown in the open ground they can be lifted and potted, and if well watered will not wilt a particle. After being used they can be replanted and will not show any appreciable injury.

Of the older kinds one of the best and one which should be in every collection is *Premeices de Neice*. Florists should have all of them.

Davenport, Ia.

J. T. TEMPLE.

heavy, deeply-colored flowers of remarkable substance. In a batch of seedlings of *L. rosea* we obtain an interesting variation in color. Some of the blooms are quite short and distinctly bell shaped, others of greater length and curiously mottled and spotted. It is not difficult to propagate either the red or the white flowered *lapageria*. In the case of the white variety the best way is to layer the shoots, as this kind does not come true from seed, as has been often mentioned in the *Garden*. Both should be grown together, although we often find that only one has a place at all, the red variety; but this is a mistake, as the clear waxy white flowers of the beautiful *L. alba* are in excellent contrast with those of the other kind. The best way to show off the beauty of the *lapageria* is as a climber. Sometimes we find it grown as a pot plant, and a miserable failure usually results from this treatment. It is essentially a climber, and delights in its native home to ramble over shrubs; therefore as natural a condition as possible should be chosen for it. A well-drained border is a necessity, and slugs must be kept away from the tender rising shoots. Long tubular lamp-glasses can be used most advantageously to shield the young growth from these small marauders. The accompanying illustration shows the extreme elegance and informality of *Lapageria rosea*.—*London Garden*.

Nomenclature.

BY ROBT. J. HALLIDAY.

[Read before the New York meeting of the S. A. F.]

In treating of the nomenclature of plants the subject admits of the following divisions: scientific nomenclature; floral nomenclature; popular nomenclature; market house or old woman's nomenclature. Closely allied to the topic are such frauds as substituting, renaming etc.

First. Scientific nomenclature, all botanical names given to plants, subject to the universal rule of priority. For example, ampelopsis, camellia, ipomæa, etc. With this classification we have no right to interfere, nor do we wish to do so in any way.

Second. Floral nomenclature. Here we are all interested. The naming of varieties is by the florist, their originator, and the rule of priority should be observed here also, (but is not always) as to the names of favorite flowers. Examples are Camellia Jenny Lind, Fuchsia Rose of Castile, Geranium Happy Thought, Rose The Bride.

Third. Popular nomenclature. Much trouble and confusion arises from not giving in catalogues and periodicals the scientific as well as the popular name. Let us ask, to illustrate, what is Boston ivy? Is it Ampelopsis Veitchii, Senecio scandens, or a variety of ivy?

Fourth. Market house nomenclature. I have also designated this as that of old women—in no wise reflecting upon that eminently respectable class, female and male of the community—but I am not sure that a more fitting appellation would not be humbug nomenclature, since in its use all other systems of nomenclature are ignored, and a name is substituted which not only puzzles the botanist and the amateur, but may "deceive the very elect." How many vines are sold as the "cinnamon vine?" What is the "wax-plant," "Painters brush," "Beefsteak plant?"

Premising thus, I will say of this subject of the names of plants none is of more importance to this association; no one other thing will do more to bind us together and make our association a success, than an effort to prove to the world that we are guided by honesty and integrity. There is nothing so important as fair dealing between ourselves, and the honest presentation, through our catalogues or the advertising columns we use, of what we have to dispose of to the public. Our loved profession calls for a careful and honorable statement of the goods we offer without unnecessary laudation, calculated to mislead, deceive or cheat.

To correct scientific nomenclature is not the object of this paper, however important it may be to have correct botanical names; but with the correcting of floral nomenclature and popular names this association has the most to do, and any attempt to introduce high sounding names, without authority, for those already established should be condemned by all honorable men of the trade. We want to understand each other in what we catalogue and sell.

How is this understanding to be reached? My views are that by a committee of twelve men much would be accomplished towards amending our present nomenclature, and it is to be hoped sincerely that such a one will be ordered here to-day. We need reform in the matter, and we need it badly, one and all of us. Our catalogues require pruning. Under the present status some would like to do the proper thing, but others will not allow it.

A committee such as suggested would have great influence in correcting abuses and a rule would be established as general and final, and settle the question as to whether scientific, floral or popular names should be used, or whether the three are not better than any one employed alone.

I am greatly in favor of popular names as well as scientific, but the popular must not be misleading ones. Or, are you going to allow us to continue to supersede popular names for floral nomenclature without giving scientific names as well, or allow them to be known in different parts of the country by as many aliases? This latter has been the source of great confusion, not only to us of the trade, but to the amateur and the flower-loving community.

RENAMING.

This practice is growing and should be condemned. Allow it to go on and extend, and in a short time many of us will be classed with those trades and professions which humbug the public. Plants are advertised, as most of us are aware, with high sounding names, not those given them by the originators; and some even go so far in the highway of impudence as to give pretended warning. "We are the only firm which has the true Eureka," etc., etc.

I will give an example. Supposing we have a plant—Fuchsia Souvenir de Prince Albert—from France, imported by many under this florist's name. Some one not satisfied with the name on pecuniary principles, changes it to "Babbling Brook," or some other sensational name, to have something different from his fellow florist in name, but not in fact. Is this honest? To this practice I could give a deserved name, but prefer to leave that to the association.

Against fraud, fictitious namings, deluding the trade and the public, a tribunal is needed whose authority would be recognized as effective and final. I will give examples of renaming. Coleus Dr. Gross of the west was taken east and called "Nellie Grant," so was Carnation Secretary Blaine and Mrs. Carnegie. Heliotrope Madam Blomage from Europe was renamed "Snow Wreath," sent back to England under this new name, returned to us again under the name of "White Lady." There are many similar cases to this.

Our association, now numbering over one thousand members, we need to be doing something practical to keep together, and to gain for its ranks those yet remaining outside. Those who attend its annual meetings are certainly benefited by the hints and suggestions received, and pleased by the opportunity for social intercourse, for making and renewing acquaintances and for cementing friendships, but what has been done for the stay-at-home? Many have not the time, others lack the means to attend these yearly gatherings, and it is our province and our duty to do something for their good, and something that will advantage them and the whole trade.

One way to do this, in my judgment, is to raise a committee of competent men—men without fear, favor or prejudice—who will exercise their own free will and independent judgment in all matters that may be laid before them. We want men to do right, not for appearance sake, but because it is not their nature to do otherwise. Such men can be found, they are right here with us to-day. The committee should be composed of twelve men, of whom nine must agree before a verdict is rendered.

Then the florist in moderate circumstances, the new beginner, the greenhouse worker, who has only gone into a modest business for himself, want authority for what is now advertised in our catalogues and heralded the country over in magazines and newspapers. One man as authority is no longer countenanced. The committee with functions such as are suggested to-day, was proposed at our first annual meeting in Cincinnati four years ago, but the idea was not utilized.

Every florist should have the right to name his own seedling (and this right ought to be sacredly preserved to him, and no one allowed to change or rename it) and to place it upon the market as he thinks best. His reputation may be such that it will go at once and upon his own word. As suggested before, one man's word goes but a short way generally in our line now a-days. Now the people want something more reliable. Establish here to-day the suggested committee of twelve men and you will at once accomplish much towards laying a foundation for the correction of nomenclature, of substituting, of re-naming and of humbuggery.

As a practical grower lacking knowledge, I would ask our committee when established to give the proper names and synonyms of the following plants, so they may be catalogued correctly, and we may understand each other in print. If synonyms, let one or the other and the authority there be given. How does Fuchsia Storm King of New York differ from Frau Emma Topfer of Germany? Is Storm King the English translation of Frau Emma Topfer? What is the proper name for Ipomæa Mexicanum? Is this a market house name? What is the proper name for Rose Ball of Snow? Is it an American seedling, or is it Boule de Neige of French origin? Is Geranium White Swan an American seedling, or is it La Cygne which was sent out two years ago? Would not your committee recommend in cataloguing and advertising to give the French as well as the English—one or the other in brackets?

It is not all lovers of flowers, any more than myself, who are French scholars, but the committee can stop this confusion. I would like to ask the committee for information regarding the three ipomæas. Is Ipomæa Childsii new, and in what respect does grandiflora differ from bona nox? What is the correct name of the great Siberian lily, so broadly heralded over the country a year or two ago? Some would like to catalogue it with proper name. How does the new Tea Rose The Gem differ from Marie van Houtte? What would a committee do with this?

SUBSTITUTING.

By this is meant sending one kind or variety of plant for another ordered of the same color, or nearly so. As for example, sending Rose Cornelia Cook for The Bride. The necessity or excuse for this will be obviated by the correction of our nomenclature. Give to plants known to be good and distinct the seal of the association's approval, and substitution will be seldom practiced.

There are some who class substituting with what is more aptly to be designated as fraud. This is where a hundred kinds are taken from one bundle or batch and labeled to suit the order. This kind of substituting will always be practiced by street vendors or peddlers, but is never thought of for an instant, of course, by any florist of reputation.

LAPAGERIA ROSEA—NASH COURT VARIETY.

APPROVED VARIETIES.

In yet another direction could this committee be of great value. Most of you must admit that our catalogues are becoming a jumble, and a reduction is needed in the number of plants named. The tendency has been to increase names without distinction. Advertise before the trade and the public generally—this seems to be the motto towards the adoption of which we are fast drifting, if we have not adopted it already in practice.

By some it is claimed that the more names and the longer lists the more demand. Henceforth I hope our practice will be fewer names and more distinct kinds. Take for instance the roses, Agrippina and Queen's Scarlet, so near alike that one of them will answer every purpose. Our committee, I am sure, would pass without notice Queen's Scarlet, and there would be one less to catalogue. Then we have Roi de Cramoisie and Eugene Beauharnais, I do not say that these are identical with Agrippina, but so similar that of the four sorts named probably your committee would approve of two of them. The other two would drop from the lists—though all who wish may continue to catalogue them.

Go through the teas, the bourbons and the hybrid perpetuals in the same way and the florist with moderate glass will be able to compete for popular favor;

the beginner will not be bewildered, and the amateur who has been humbugged will not suffer again, and our business will be conducted by a higher standard. Then those living in remote parts of the country, or far from floricultural centers would have something else to depend upon, than the flaming description so often seen in our catalogues.

Let it be remembered that it would be no part of the duty of the committee to condemn any plant, save upon sufficient evidence that there is fraud connected with its introduction or naming. This indorsement or authorization—say the initials S. A. F., or any other mark to be adopted, would be a guarantee that it had received the favorable verdict of twelve competent judges, confirmed afterwards by a majority vote of the members present at a general meeting of the association.

Then there are many excellent plants grown for the last ten or twelve years or longer, which by many are not yet sufficiently known to purchase without hesitation. The association's authorization appended to those would obviate all further discussions or doubts as to their values. For instance, take the miniature vine, Ampelopsis Veitchii, the good qualities of which are known to hundreds of florists, though there yet remain quite a number not familiar with them. Or

take such plants as the following which, if deemed worthy, your committee might designate and decorate with the sign of the association's approval: *Aspidistra lurida variegata*, *Pandanus Veitchii*, *Palm Latania borbonica*, *Palm Seaforthia elegans*, *Cyclamen persicum*, *Acacia pubescens*, *Farfugium grande*, etc. I would like to see your committee affix the seal of approval on such plants where it considers them worthy of such indorsement, then in my next catalogue I could so designate them, so that the inexperienced lover of plants might rely on the good qualities of such as are thus approved. I would also like the society's approval of such varieties of roses as *Perle des Jardins*, *The Bride*, *La France*, *Catherine Mermet*, *Niphetos*, *Sunset*, *Bon Silene*, *Safrano*, etc. I would also like to know the good qualities of the new *Heliotrope Mrs. David Wood*. Is it double? Also the new rose-colored violet *Mad Millet*.

The roses and other plants are named only as examples and not with any intention of forestalling any action of the committee. Many may ask what would be done with roses, etc. of recent introduction, for example, *Princess Beatrice*, *Meteor*, *Viscountess Folkestone*, *Ye Primrose Dame*, *Puritan*, *Luciole*, etc. These are all advertised and catalogued as first class in every respect, but can a committee of twelve men be relied upon to give such an indorsement? It is doubtful in the extreme. They have not been long enough disseminated for their true character to be known. And so throughout long lists of plants. Members should be invited to submit lists of plants grown and offered for sale by them, for the committee to pass upon; and as this was done in the course of time we would clear off the rubbish.

New plants and those of recent introduction should be fully tested before receiving the sanction of the association. Condemn no plant; if it is not worthy of approval it will fade from lack of notice. Much more could be said on this point. Appoint this committee and there will be many similar questions to be submitted. Its work will be varied, perhaps troublesome, but the result can be only useful, profitable and beneficent to the entire trade of the country, enhancing in the end our profits, the satisfaction with which business is done, and above all, establishing the character of our membership for business-like and fair dealing with all men, no longer sneered at as followers of a calling in which a low standard of honesty is maintained.

Lapageria Rosea.

There are many varieties or forms of *Lapageria* in cultivation, differing chiefly in size and the depth of coloration. Some of the paler forms may certainly be described as rose, and when this occurs the pale or white spots are brought out with great prominence; but, on the other hand, when the coloration becomes intensified, it becomes inclined to crimson or rosy crimson. The Nash Court variety, of which we give an illustration, is externally of an intense unspotted rosy crimson, with a rich shining lustre, while internally it is closely and conspicuously marked with white, on a slightly paler ground. We must also speak in eulogistic terms of the great size of the flowers of this variety, as they measure from $3\frac{1}{2}$ to 4 inches in length and appear magnificent as they hang in closely contiguous pairs. The weight is also something extraordinary, which speaks for

itself of the great substance of the floral segments popularly termed petals. The firmness and rigidity of the same correspond with their thickness or substance. A number of leaves and shoots bearing leaves which accompanied some flowers kindly sent us by Mr. Humphrey, gardener at Nash Court, were equally, if not more remarkable for their noble dimensions. Without the accompaniment of flowers we should certainly have said the leaves were those of *L. rosea alba* enormously enlarged, as the leaves of the latter variety are naturally broader than those of the type. The leaves of the Nash Court variety of *L. rosea* are heart-shaped, elongated instead of lanceolate, and measure from 4 to 7 inches in length by 3 to 4½ inches in width, and are of a firm and leathery texture, deep green and shining. We have also been favored with flowers from Messrs. John Laing & Sons, Forest Hill, who have acquired the stock and who will put this grand variety into commerce.—*Gardening World*.

Philadelphia.

Trade is still improving and the outlook is certainly very promising. The florists have made no marked changes in their stores, but a number, by using a little paint and paper have freshened them up considerably. The one exception to this is the store at Eighth and Sansom streets. We learn that James Ritchie started here over thirty years ago. The firm's name was changed to Ritchie & Cauley, then to Ritchie & Son, later to Ritchie Bros. On January 15, 1885, J. H. Campbell & Sons took the store, and this year have made great improvements for a small place. We regret that "Bennie" was not in when we called, as what he knows about the place would fill volumes, as he has been a fixture for years.

The offer of Mr. Peter Henderson of \$100 for the best herbarium should not be overlooked, and those that intend to arrange one should remember that there are a number of fall blooming plants that can be collected now. The young men, and especially those connected with growing establishments, should make an effort to get this prize. Start at once to collect, then get a good book on botany which will tell you how to arrange them.

There are eleven men employed at one of the nurseries in Philadelphia who have formed a little club. They propose to fit up a room over the potting shed and by making small weekly assessments obtain money to use for buying books, papers, games, etc. The object of the club will be purely social and no person can become a member unless employed on the place. We think the idea is a very good one and shall take pleasure in reporting their progress, and hearing from any other clubs that may start.

Can not some person devise some better means of covering decorative plants than wrapping up with paper for moving short distances in very cold weather? Could we not get some very cheap bagging, line it and have hooks on one edge?

Mr. John Thorpe deserves great credit for the graceful arrangement of wild flowers and grasses in the old shoe, as illustrated on page 105. Many a young "artist" in our business would be benefited if he would study well the loose, careless, graceful arrangement of flowers. Apropos to this design we have sold hundreds of rough cherry bark "logs." We found a decayed wild cherry tree in the woods, cut the branches into pieces

about twelve inches long, being careful to preserve the bark and then took out the rotten wood from the center. By filling the logs with moss and arranging choice flowers loosely in the ends and tying a handsome piece of ribbon around the center with the bow on top, we were enabled to get anywhere from \$5 to \$10 for them. We also put pieces of bark on easels, lashed a cluster of flowers to it, sometimes using a spider's web made out of wire, which pleased many people. The design on being sprinkled made the web look very natural and as though it was covered with dew. We have also taken straw coverings of wine bottles, filled the open end with the choicest flowers, tying a bow of ribbon on the smaller end and in many cases they were much appreciated. Several weeks ago when passing a store we were attracted by a broken willow basket that had been thrown away; it looked like a wine carrier large enough for two bottles. We took it to the store, bronzed it inside and out, filled it with the finest flowers, having orchids falling from the broken places, sent it to a horticultural exhibition and it was very much admired.

Roses are improving in quality. American Beauties are retailing for \$3 per doz; La France, Mermets, Brides and Bennetts, \$1.50; Perles, Niphets, Papa Gontiers, Sunsets, \$1. There are fewer Bon Silenes grown this year than ever before and we fear that we shall soon be obliged to say good bye to this little favorite.

At the last meeting of the Florists' Club Mr. Edwin Lonsdale read a very good paper; for a subject he had "The Philadelphia Flower Market," (that is coming next year). A number of the largest growers are strongly in favor of it. Mr. Robert Craig spoke very much to the point when he said, "I will send every flower I grow to the market if three fourths of the growers in the city will do the same." Messrs. Edwin Lonsdale, Chas. F. Evans and Wm. Baker were appointed a committee to ascertain how many growers were in favor and would support a market. Mr. Robert Kift is very enthusiastic on the subject and feels as though it would be a benefit to the whole trade.

The gentlemen actively connected with the chrysanthemum show November 13-16, assure us that it will be better than last year, which is saying a great deal.

H. H. BATTLES.

Baltimore Odds and Ends.

The Maryland Hort. Society proposes to hold a chrysanthemum show November 14-15. This announcement comes a little late in the day; it was not generally expected that such an exhibition would be held this season so that few, if any, chrysanthemums have been grown for show purposes, nevertheless there is enough good material on hand to make a fine display. Our boys vow they're going to do the best they can on such short notice. An admirable hall has been secured, there is an unusually competent committee in charge, and Secretary Sands is "whooping it up" for all its worth, so that prospects are cheering for an excellent exhibition.

Bignonia venusta, I think, one of the prettiest climbers we have and yet it doesn't seem to be very commonly grown by commercial florists for whom it ought to be profitable. If well cut back about August or September it will give an abundance of bloom at a season when flowers are in demand. It should have

a temperature of 60° to 70°, and although it will bear considerable neglect it will amply repay a little special care and attention. I saw an unusually fine specimen of this *bignonia* last season at Mr. Wm. Fowler's and by the way, florists visiting Baltimore should not fail to call at Mr. Fowler's place, a part of the once famous John Hopkins' gardens, and but a few minutes walk beyond the city limits. Mr. Fowler was for a number of years gardener to the late John Hopkins, and after his employer's death he secured from the trustees of the estate a lease of the greenhouses and adjacent grounds. Having made suitable alterations in the houses he has since devoted himself to commercial gardening. The business is confined chiefly to growing cut flowers and plants for the local trade, but the houses contain many good old things not often met with nowadays. The conservatory is the only building unaltered; it contains a number of fine specimen plants which, though of little use to the present incumbent, are cared for as the property of the estate. The grounds are rich in rare evergreens, while an urn here, or a piece of statuary there, still speak to the visitor of the beauty and grandeur for which this place was celebrated during the life time of Mr. Hopkins. On the occasion of my visit I was a good deal pressed for time, but I am looking forward to another visit in the near future, when I hope to devote an entire day to "doing" this grand old place where the past and present of American gardening are so singularly interwoven.

The regular meeting of the Baltimore Florist Club held on the 3rd inst. was a particularly interesting one. Mr. Kress read a good paper on roses. Mr. Walters had an excellent and practical essay on "What it costs to grow a geranium in a 4-inch pot." The essayist stated that they were grown for two widely different purposes. One man grew for bedding and desired simply a good stocky plant ready to bloom, another man grows for market purposes, and he must have a good bushy plant in bloom and built generally to attract the attention and shekels of passers by. A house 64 feet long with benches suited to hold thirteen 4-inch pots in each row, standing close together, will accommodate 4,700 plants, while of fine large market plants 2,500 would fill the same space. To grow the latter number, Mr. Walters said the necessary expense would be as follows: 2,500 3-inch pots, \$17 50; 2,500 4-inch pots, \$25; 4 tons coal, \$22; soil, \$3; ground rent, taxes, etc., \$39; wear and tear of greenhouses, \$30; horse and wagon, \$10; market stand and toll, \$5; labor, \$100; bringing the cost of a first class market plant in 4-inch pot to about 10 cents, while the cost of 4,700 bedding plants would be about 5½ cents each. As a matter of course above items would vary in different localities, but the figures given by Mr. Walters are a fair estimate of what it costs to grow geraniums in 4 inch pots about Baltimore. President Halliday read a very able paper replying to questions asked at previous meeting, as to what benefit the S. A. F. was to the trade in general. His arguments were sufficient to convince the most skeptical. This champion of the S. A. F. further replied to doubts expressed concerning the longevity of that organization. Of his views however readers of the FLORIST may judge for themselves.

I like the remarks on page 74 in reference to "early firing." Most of us I guess find it necessary to start a little fire once in a while before the regular

season sets in, but the writer found, and others have doubtless noted the same thing, that plants, especially roses, were rendered much more susceptible to injury by this system of occasional firing, and so years ago I adopted the plan of keeping up my fires once they were started, no matter how early in the season that might be. It costs a little more coal, but this extra cost is as nothing compared with the improved health and vigor of the plants.

Business is a little slow in Baltimore at present, but there is still something doing. Bulb trade has been very satisfactory and there has been a tolerable business done in connection with the fall opening of dry goods and millinery stores. Quite recently the leading dry goods firm of Hutzler Bros. moved into new quarters, probably one of the finest buildings of its kind in the country, and their greatest attraction on opening day was a perfect floral fac-simile of the front of their building. The piece, 6x9, was a magnificent bit of work, every detail being carefully followed. This floral edifice was erected by Pentland pursuant to orders received from New York parties.

The new conservatory at Druid Hill Park has been completed and partially stocked from the Patterson Park houses. This robbing of Peter to pay Paul has been a decided advantage to the Patterson Park, as the houses were getting too overcrowded. Baltimore florists would very willingly contribute towards stocking the new conservatory, but they feel decidedly sore towards the park commissioners for their action some time ago in prohibiting the exhibition of plants from the park conservatories. It is probable therefore that the honorable commissioners will have to buy stock or depend on donations from private growers for their new building. A. W. M.

October 6.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By practical gardener and florist; married. Private place. Best references. JOHN GREENHALGH, box 144, Woodbury, N. J.

SITUATION WANTED—By a young gardener; German; 9 years' experience; private place preferred. Address J. H., care Am. Florist, Chicago.

SITUATION WANTED—By an intelligent florist and gardener. Would like a place as manager or propagator or private place. Address W. PAULING, Wrights Grove, Cook Co., Ill.

SITUATION WANTED—Single German, competent florist and gardener in all branches, would like to engage at once if particulars in answer are given. Address WM. K., care American Florist.

SITUATION WANTED—By young man aged 22; 6 years' experience in England, 1 year in Canada 2 years in orchids, good references. Address GEORGE, ERLSOFER, Davenport, Ont., Canada.

SITUATION WANTED—By a competent gardener and florist; understands all branches of gardening. Grape and rose culture a specialty. Capable of taking full charge of gentleman's place. Understands the care of blooded stock if required. Best of references. Address J., care American Florist.

SITUATION WANTED—As foreman, propagator or second, in a large nursery. Age 29; 17 years' experience under glass in England and Canada, in all branches of the profession. Roses a specialty. Good references. Abstainer. Address G. SMITHERS, Brockville Greenhouses, Brockville, Ontario.

WANTED—Seedsmen—Experienced in care of stocks of garden seeds, for wholesale and retail. Address SEEDS, care Am. Florist, Chicago.

WANTED—If Wm. Reed, florist, formerly of Spring Lake, Oconomowoc, Wis. communicates with I. W. Conrad, 96 W. 14th St., Chicago, he will hear of something to his advantage.

WANTED—A partner to engage in the horticultural business in Guatemala, Central America. Climate healthy, soil very fertile. A splendid chance for an enterprising man with some capital. Address at once. MARTIN BENSON, Cutler, Dade Co., Florida.

WANTED—Practical florist. Must understand the raising of greenhouse stock and forcing of vegetables. Single; give references and state wages expected including board. Address FLORIST, box 753, Fort Dodge, Iowa.

WANTED—A first-class, sober and industrious florist, thoroughly competent to grow roses and other cut flowers for commercial purpose and to take charge of same. No others need apply. S., care American Florist, Chicago.

WANTED—A young man to assist in store; one who has had some experience preferred; must make himself generally useful. Please state wages wanted, experience and give references. Address EVANS & BATTLES, 108 S. 12th street, Philadelphia.

WANTED—A good florist and gardener. Vegetable raising for Market a specialty. An honest man, not afraid to work, will have a permanent position and only such need apply. State wages expected. Married man preferred. Address R. G. NICHOLSON, Chestertown, Md.

WANTED—A young man practically conversant with the seed business, especially the market garden and retail department. Must be thoroughly competent to take charge of same, and to write and speak German. Address, stating reference A. Z., care American Florist, Chicago.

FOR SALE—1000 feet 4-inch cast iron pipe, two boilers and some manifolds and elbows all in good condition. Cheap. N. STUBBS, Anacostia P. O., D. C.

FOR SALE—One of the finest retail flower stores on the West Side; fixtures all new and well stocked with baskets and designs; a good trade established; will sell at a great sacrifice for good reasons. Address J., care Am. Florist, Chicago.

FOR SALE—Finest florist's store in Chicago. Sales average \$22,000 a year. Big stock of seeds, bulbs, porcelain goods, and imported artificial flowers, etc. in addition. Good location. Owner engaging in other business is reason for selling. Address T., care American Florist, Chicago.

FOR SALE—Five well stocked greenhouses and contents, city water, near entrance to one of the principal cemeteries of Cincinnati, O., with a lucrative fall trade. Average amount of fall trade sales to the cemetery alone is \$500. Reason for selling, bad health of owner. For full particulars, address C. A. PETERS, Price Hill, Cincinnati, O.

FOR SALE—An old established greenhouse can be bought on account of illness of the owner, at a very reasonable price. 5000 feet under glass and fully stocked; situated in one of the smartest manufacturing towns in New England. Address J. H. GRIFFITH, care Rural New Yorker, Box 3318, New York City.

WANTED.

To purchase canes of *Dracena Terminalis*, also seedlings of *D. Indivisa*, stumps of *Cycas revoluta*, seedling Palms and Ferns. Please state terms and prices, and confer with

GOODING & LEITCH,
Crawford Road, north of Wade Park, Cleveland, O.

HOT WATER BOILER FOR SALE.

This boiler is made of the best wrought material, 32 inches diameter by 10 feet in length, with four 8 inch cylinders through it. One of the finest hot water boilers extant, and recommended by best engineering talent as the most economical and durable heaters made. It has been in use one season, and the reason for having the same taken out is, we are putting steam system in all our houses. We paid \$15 for this. Can be had for \$100 cash, free on board cars. Absolute guarantee as to quality and condition given. HILL & CO., Richmond, Ind.

FOR SALE.

Five acres of land in a high state of cultivation 1½ miles from center of city, two greenhouses 60 feet long; good building, plenty of water, three forcing pumps; fruits of all kinds; 40 bearing grapevines. Good market for flower and vegetable plants. This is a good chance for young beginner in the flower business. Address

E. WEBB, Real Estate, Agt.,
YOUNGSTOWN, OHIO.

VOLUME III

— OF THE —

AMERICAN FLORIST,

Containing 586 pages, handsomely bound in half leather, may now be had from this office, post-paid, for \$2.25.

With the very complete index this makes an exceedingly valuable reference book.

VOLUME II BOUND IN SAME STYLE AT SAME PRICE.

AMERICAN FLORIST CO.,

54 La Salle St., CHICAGO.

NOVELTIES IN ROSES.

Also the leading forcing varieties, Teas, Hybrid Teas and Hybrid Perpetuals, and Novelties in Chrysanthemums.

Per 100
Tabernaemontana.....\$6.00 to \$8.00
Stephanotis Florida, per doz, \$2.00 and \$3.00

November Floral Fashions.

As if wearied of the "sere and yellow leaf" and the gorgeous effects made with colored foliage, decorations have toned down in tints until they are almost demure. Ferns are so favorite that they compose the main part of all embellishments. The soft lace-like fronds of *Adiantum cuneatum* are more effective than the gorgeously dyed autumn leaves, and when massed together they are very conspicuous. Table arrangements are made with either an entire covering of maiden hair ferns with floral effects in each corner, or else there is a center circle of these with a cluster of Russian violets near the edge, or a bunch of roses in the same position. The baskets of living plants introduced by McConnell are frequently used for dinner center pieces, but these are so choicely filled that those who possess them dislike to expose them to too much light, so they generally have a position on the drawing room table or to ornament the piano. The most fashionable dinner arrangement may be said to be the rose, lily or violet cluster among adiantums.

For luncheon arrangements the new French roses, such as *Cusin*, *Watteville* and *Wetmore*, have replaced *Hinsdale* and *Grace Wilder* carnations so long popular for these affairs. The pink and yellow roses adorn the luncheon board gloriously and show off well in the glass bowls and baskets that are so much liked by young girls. Favors of Bohemian glassware are now the vogue for young ladies' luncheons, which are being given at a furious rate by the coterie, who are this winter to make their debut in society. The girls who have been separated during the summer are now feasting each other with sweets and flowers to attest their joy at reunion. The most delightful line of favors are filled with blossoms to decorate the table and then be given away. Blue, crimson and yellow glass handled baskets contain clusters of *Cusin* and other roses of the same family. The *de Wetmore* rosebuds are very much admired; it is an excellent keeping rose, the same as *Cusin* and *Watteville*. Very natty poke bonnets of glass are also flower holders and have a crown trimming of ribbon. Pitchers of frosted glass hold roses, or look very daintily filled with any small flowers.

The corner ornamentations when dinner table are bedded with adiantums, are exceedingly artistic. Pansies are laid in purple and yellow patches so that they cut off one corner irregularly in a very æsthetic way. Diagonally opposite these will be a diamond of violets in the corner, all varieties of this flower being shaded into this design.

There is a new departure in the way of presenting floral designs to actresses nights when they make their first appear-

ance in new plays in parts they create. A bower of foliage is erected at one side of the proscenium, or in the center of the orchestra if there is room, and the floral gifts are all hung on this and not passed to those to whom they have been sent. The bower is of course an ornament and there is time for the audience to have a good look at the designs before they are removed.

Baskets with the handle rising from the center and the edge turned over like the rim of a hat are filled with Puritan roses and ferns for bridal gifts. The handle is almost as round as a hoop and is covered with white rose buds, usually Niphetos.

FANNIE A. BENSON.

New York.

New York.

Hanft Bros. made an elaborate decoration of a terrace garden for the Brewers' convention.

C. L. Doran for an entertainment given at Chickering Hall for the yellow fever sufferers, embellished the stage tastefully with plants, free of cost.

Henry Siebrecht, Jr., is now his father's cashier in the Fifth avenue store.

Florists are all grumbling at the low prices of flowers. Only those who depend upon transient trade keep any stock of flowers as yet.

Lemon verbenas are now the popular bit of foliage "thrown in" as was geranium, to the order of cut flowers. It is very much valued.

Peter Henderson & Co. have just completed a new seed warehouse 50 x 100 feet, and three stories high.

Hanft Bros., of Fifth avenue, have widened and otherwise improved the entrance to their store and redecorated their interior. They have now a highly attractive establishment.

Plant stands of cedar, costing from \$15 to \$25, are very neat and ornamental. These are 2 feet 8 inches high and in length and are 14 inches wide.

It is about decided to hold the coming chrysanthemum show in a tent to be erected on the northwest corner of 14th and Union Square. It has been impossible to engage a suitable hall for this purpose.

Mr. T. H. Spaulding has chrysanthemum plants that are six feet in diameter. He has 5,000 chrysanthemum plants altogether on his place.

F. A. B.

Boston.

Galvin's exhibition of the "Century Plant" in Horticultural Hall has drawn crowds of people and made more money than a whole horticultural exhibition would. The officious showman in charge clears his throat and solemnly informs the gaping public that "this plant, ladies and gentleman, flowers just once

in a hundred years and is now exactly one hundred years and six months old." "How can you tell so exact?" inquires a doubtful bystander. "Oh, it is a matter of record," replies the showman with a look of injured innocence, and adds, "It is of very rapid growth. You observe how the bracts ramify on the stem as the decimation goes on." Over against the wall stands a smiling donkey made from pampas grass, and as the last remark falls upon his fuzzy ears they have to hold him up to prevent his falling down. In the lower hall is a model of Ancient Jerusalem, and at the entrance stand two shivering young men who strive to outdo each other in crying, "This way to the sentry plant," and "This way to Jerusalem," and you pay your money and take your choice. In Boston we don't have to depend upon politics for all our excitement.

Artist Storer, of this city, is at Short Hills, N. J., painting rare orchids for Messrs. Pitcher & Manda.

The Mass. Hort. Society held its annual election of officers Oct. 6 and the following were elected: President, Henry P. Walcott; Vice-Presidents, Charles H. B. Breck, Benjamin G. Smith, Frederick L. Ames, William H. Spooner; Recording Secretary, Robert Manning. W. J. S.

LILIAM AURATUM.—The demand for the blooms of this lily is on the increase. Hallock & Son report sales of 5,000 spikes this fall and state that with a little care and judgment blooms may be had every month in the year.

A FLORIST in a western state advertises in the local paper that he has a number of creditors who are now living with their second wives, but who have not yet paid for the floral designs which symbolized their intense grief at the loss of their first loves. He threatens to publish their names unless they step up and settle within sixty days.

CHRISTMAS GREENS.—The sales of these by the florist is constantly increasing. Mr. L. B. Brague, Hinsdale, Mass., gives his sales of last season to florists as 800 barrels of bouquet green, 25,000 yards of wreathing made from the green, and 10,000 Christmas trees, in addition to several hundred thousands of cut hardy ferns which have in some sections partially supplanted smilax for use in decorations and in floral work.

KANSAS CITY, MO.—Baker Bros. have opened a floral store at 15 East Seventh street. J. N. Kidd, formerly of Logansport, Ind., is a new florist at 711 Main street. E. F. Heite & Son have built a chrysanthemum house 45 x 20. W. W. Hamden & Co have succeeded Hamden, Mason & Case, the seedsmen at 417 Walnut street.

Mr. Thorpe Explains.

Here is how I became identified with that original design. After a *sumptuous* meal at the hotel on Iona Island, together with a few sportive friends I went to see the "Base Ball" game. On arriving at the ground my attention was called to a group of men intently looking at something almost microscopic in size laying on the sod, and to satisfy my curiosity I had to ask, what is the trouble? One fellow from the far west said somebody had thrown up his collation, which wasn't true. At this moment up stepped the noble Fred Gordon and said, "John, here's an original design I have made up and I want to present it to the umpire. It's my own creation, John, but nobody dare present it as theirs. That Willie Allen is waltzing up and down here on the foul line with his cane, like one of the finest on Broadway and we are afraid he will club us."

It did not take me long to grasp the situation and the design and as soon as there was an opportunity for the east to beat the west by a decision of the umpire, I gracefully stepped up with that truly original and valuable design and with my best manners presented it to that prince of umpires, Charley Anderson. Well, never shall I forget the time. Here's what he said (the umpire): "Take that thing away! Strike one! Will Allen, why don't you keep these folks away? Foul! No ball, striker out!" Not to be outdone and knowing that those members of the S. A. F. who could not attend the convention would like to have some reminiscence of it, a happy thought struck me that a photograph in all its truthfulness would be appreciated in spite of the umpire's "strike one," and that's how the photograph came about.

So far so good, but here comes the Croton tiglium, or the bitter part. Fred Gordon, the original designer of the "piece de resistance," wrote me, under date by the postmark August 25.—"Dear Sir: Kindly inform me what became of that piece, I O.N.A Island, U O 2 know. Did Cinderella see that Slip-her? Please reply or pay me for my efforts" I did not reply to Mr. Gordon for fear of being saluted with "strike one," or "foul," or "striker out," and this is how the matter stands in relation to what I did with the best intentions.

JOHN THORPE.

Judging by the Point System.

Having recently had opportunity to study this system in practical operation, we have no hesitation in pronouncing it a great advance on the old method. The system should by all means be universally adopted.

There are, however, some disadvantages which should not be overlooked. Rarely will you find three or five judges whose ideas of perfection—10 points or 100 points as the case may be—are the same, and should one of three have a low standard and consequently vote comparatively high on everything, while the others having a higher standard vote low accordingly, the one who votes high wields an undue influence in the grand average, and where he may differ in judgment in regard to any entry, he may overrule both the other judges. This however will probably rarely occur and is not an argument against a system which has so many great advantages to offset it.

An inspection of the "returns" from the judges is very interesting. The remarkable unanimity in some votes and

the wide difference in others is a subject for much speculation, but a still more interesting fact is that while one of the judges may occasionally vote lower on one point than the others he is pretty certain to vote correspondingly higher on some other point thus keeping the average practically the same.

A very valuable feature of the system is that each exhibitor may know the exact degree of excellence he has, in the opinion of the judges, attained, and by how many points he has won or lost a premium.

Where there are three judges voting on three different points on each entry, the nine votes of the three judges may be added and the result divided by nine, giving the average quickly. There should of course be no discussion on the merits of an exhibit by the judges and each be in ignorance of the result until the returns are compiled and the averages computed.

Asparagus Plumosus.

How can we distinguish *Asparagus plumosus* from *Asparagus plumosus nanus*? Does the variety *nanus* have any tendency to climb? If so, does it climb less rapidly than the type, or wherein lies the distinction?

This question has been asked by me a number of times but without getting any satisfactory reply. Your large circulation among the very best talent in the business ought to bring the desired information.

A TYRO.

OBITUARY.

WILLIAM C. GERMOND died at his home in Sparkill, Rockland county, N. Y., October 6, at the early age of 32 years. He was widely and favorably known to the trade as an enthusiastic cultivator of roses.

Mr. Germond was a person of peculiar endowments. From early life singularly correct, generous, courteous, cheerful and courageous; always earnest and zealous in business, respected and esteemed by all who knew him. His funeral was largely attended. The services were conducted by the pastor of the Reformed Church at Tappan, at which place he was buried. He leaves a young widow to mourn his loss.

W. B. CORNING.

News Notes.

LOUISVILLE, KY.—Edward Morat has just completed eight new greenhouses on his new place.

GRAND RAPIDS, MICH.—T. R. Renwick & Co. have built three large new houses. Trade has been excellent.

WINONA, MINN.—John Wunder has erected a new rose house 80 x 18 and added another story to his residence.

CLEVELAND.—Miss Rose B. Gasser, daughter of florist J. M. Gasser, was married to Mr. D. R. Kuisely Oct. 30.

NEW LONDON, CONN.—John Spalding has finished a new house for camellias and azaleas. Brick walls all around.

FORT DODGE, IOWA.—John U. Kellenberger has just completed three new houses, one 18 x 100 and two 18 x 60 each, heated by steam.

LOUISVILLE, KY.—Nanz & Neuner have just completed three new houses

16 x 100 each, to be used for roses, and heated by hot water.

ST. JOSEPH, MO.—Mr. Hans Nielson received first premium for floral display at the exposition and an excellent notice in the daily *Herald* in consequence.

SPRINGFIELD, MASS.—C. F. Fairfield has completed three new houses and has taken out his hot water pipes from all the houses and arranged to heat by steam.

ALLEGHENY CITY, PA.—E. Ludwig, formerly in the employ of Ludwig & Richter will start in business for himself at stand 217 Central Market, the 3d inst, as florist and seedsman.

WASHINGTON, D. C.—A floral street car with horses also of flowers was constructed by J. H. Small & Sons, for the recent banquet to street railway managers at Willard's hotel.

NORWICH, CONN.—G. Geduldig has finished two houses, one 50 x 20 and the other 40 x 12, fitted with the Hippard sash lifting machinery. Geo. Young's greenhouses have been sold and carted off. H. Goldsworthy is very low with consumption.

STILLWATER, MINN.—Mrs. Geo. Low has built three new houses, 25 x 20, 85 x 18 and 45 x 11 respectively. Also a neat office 18 x 10, lighted by electricity. Chas. Nehring is now completing two rose houses 60 x 16 and an office 20 x 10 on Fort street.

ST. PAUL.—H. W. Bunde has built two rose houses 14 x 60 each, one carnation house 12 x 32, two other houses 13 x 22, and an office 16 x 20. Louis Edlefsen has added a new rose house 100 x 15. The German gardeners of the city had a grand ball October 24.

SPRINGFIELD, MASS.—At the Bay State Fair held here October 4 to 11, ten first premiums on plants and flowers were awarded to N. J. Herrick, of this city. Among other exhibitors in the floral department were L. W. Goodell, of Dwight, J. W. Adams and the Mass. Agricultural College.

MINNEAPOLIS, MINN.—Most florists are busy repairing their houses and bringing plants into winter quarters. Weather has been favorable. Cut flower business is rather slow yet, but all look for good trade for the winter. There have been several weddings and receptions, but nothing very elaborate in decorations. Chrysanthemums are just coming in now; roses are plenty; carnations and bouvardia are scarce yet.

OMAHA, NEB.—L. A. Casper has moved his store from Fifteenth street to the Paxton Hotel building. T. N. Parker has built four more houses, two 90 x 12 for carnations, one 100 x 16 for smilax and another 130 x 8 for orchids, ferns, palms, etc. The benches are supported by iron frames. He has 1,100 chrysanthemums in preparation for the exhibition to be held in the opera house November 15. An aquatic house 40 x 30 is filled with fine stock which is looking well. Hess & Swoboda have built two rose houses 80 x 16 heated by steam, and Claus Matties has erected two additional houses covering space of 162 x 44. Henry Ehrenpfort's new houses are two 60 x 14, two 50 x 16, with a new office 16 x 16, and boiler house 30 x 22. The whole place is heated by steam, a 30-horse power boiler doing the work.

DANSVILLE, PA.—Xavier P. Le Duc will start into the florists' business here.

BUFFALO.—W. J. Palmer has completely refitted his down town store, having it newly papered, grained in white oak and put in electric light, and new refrigerators, adding much to its attractiveness.

SAN FRANCISCO.—The California State Floral Society has been organized with officers as follows: Prof. E. J. Wickson, president; W. A. T. Stratton, vice president; Emery Smith, secretary; Mrs. W. H. Ware, treasurer; directors: A. L. Bancroft, John H. Sievers, D. J. King, Mrs. Ahern and Mrs. Farnham. A paper on "The Chrysanthemum" will be read at the next meeting by John H. Sievers, of this city. The State Board of Horticulture will hold its semi-annual convention at Chico, commencing Nov. 13 and continuing four days.

CHINESE NARCISUS.—It is stated that all the bulbs sold under this name are not the true Chinese. The bulb of the true Chinese narcissus is larger and different from that of any other of the family.

10 cts. \$2.00

PRICE TO BE RAISED JAN. 1st.

The largest, handsomest, most valuable gardening magazine in all the world is *The American Garden of New York*. Its writers are practical, successful gardeners, fruit growers, florists, investigators and amateurs, whose experience covers all states and countries; thus it is adapted to the needs of all sections and conditions. It is thoroughly independent, not being connected with any nursery or seedsman's interest. It is firmly established, covering 42 years of age, dating back to the old *Horticulturist* of Downing, and the *Gardener's Monthly* of Meehan. It is practical, beautiful and finely illustrated. It is valuable to the florist, fruit grower, market gardener, country gentleman, amateur, to every man and woman who loves growing things.

You come the nearest my ideal of a Horticultural Monthly for popular circulation of any of the makers of such literature.—CHAS. W. GARFIELD, Sec'y Michigan Horticultural Society.

Indispensable to horticulturists, gardeners and florists (both practical and amateur).—CYRUS T. FOX, State Pomologist of Pennsylvania.

For introduction where unknown the magazine will be sent two months for 10 cents. Subscription price, \$1.00 a year; to be raised on Jan. 1st to \$2.00. Previous to that date subscriptions received at present low rate (\$1.00 a year), for one year or several years. Two months now for 10 cents, for introduction.

With AMERICAN FLORIST, one year, \$1.75, if sent before Jan. 1st, WITH ANY BOOKS AND PERIODICALS AT REDUCED PRICES. Address, stating your wants,

E. H. LIBBY, Publisher,

751 BROADWAY, N. Y.

RUBBER PACKING FOR GREENHOUSE PIPE CONSTANTLY ON HAND.

SEND FOR CIRCULARS.

S. WILKS MFG. CO., Monroe and Clinton Sts., CHICAGO, ILL.

Indianapolis.

About 10,000 square feet of glass has been added to the greenhouse capacity by the florists of this city the past summer.

Quite an interest is being taken in the coming exhibition. The public schools will close Wednesday afternoon of exhibition week to give the children an opportunity to attend. The committee would like to have as many florists from other cities as possible attend the exhibition and the entertainment on the evening of Nov. 14. Write the secretary if you decide to come.

At the State fair last month the display of plants, designs and cut flowers was very creditable. Berterman Bros. received first premiums for new funeral design, original funeral design, basket, bouquets and cut flowers, cut roses, newest show design, cut gladiolus, palms, begonias, etc. Mrs. Hilker received first for best arranged display of plants and second for bouquets, baskets, etc. Chas. Reiman took first on caladiums, ferns and geraniums, and second on new funeral design, original funeral design, newest show design, etc. J. Larsen took first for hanging baskets and asters. A feature was three premiums offered by an undertaking firm for the newest funeral design; there were five entries, Berterman Bros. receiving first, Weishaar Bros. & Leutz second, Mrs. Hilker third.

Nothing can beat natural gas. It is fine, and if pressure indicates anything it is here to stay for some years to come.

The system of judging suggested by Mr. Battles is a good one and should be universally adopted. W. B.

Daily Record of Work Done at the
Lincoln Park Greenhouses,
Chicago, 1887.

November 1—Tem. morning 40°, noon 58°, evening 48°. Wind SE. Continued potting rooted geranium cuttings. Potted sempervivums and echeverias from outside. Spread leaves in frame yard.

2—Tem. 47, 63, 52. W. Same as yesterday and laid down half standard roses in bed outside.

3—Tem. 42, 62, 60. W. Same as yesterday.

4—Tem. 39, 48, 36. NW. to N. Same as yesterday and laid down clematis.

5—Tem. 32, 49, 48. NW. to SW. Continued potting rooted geranium cuttings. Continued potting echeverias from outside. Bent down root-grafted roses in bed outside and prepared to cover with dry leaves for the winter.

6—Tem. 43, 66, 55. SW. Sunday.

7—Tem. 50, 68, 59. SW. Potted rooted cuttings of rose geraniums and geraniums Mme. Phitza and Earl Roslyn; also of petunias. Potted little echeverias which had been kept pricked in boxes all summer. Cleaned white-wash from glass on front of conservatory.

8—Tem. 43, 45, 40. NE. Continued same as yesterday.

9—Tem. 44, 44, 42. E. to NW. Sifted sand and prepared it for propagating. Commenced propagating *Alternanthera latifolia* and *amœna*. Cleaned and potted old echeverias. Cleaned shed and frame yard.

10—Tem. 37, 42, 39. W. Continued putting in propagating bench cuttings of *Alternanthera amœna*.

11—Tem. 31, 43, 42. N. Same as yesterday and surrounded outdoor rose beds with boards to keep dry leaves in position.

12—Tem. 32, 47, 35. N. Continued propagating *Alternanthera amœna*. Potted a lot of geraniums which had been heeled in in frames. Cleaned echeveria offsets and repotted a lot of echeverias which had been kept in pots.

13—Tem. 38, 54, 50. S. Sunday.

14—Tem. 42, 44, 45. W. Put in bench cuttings of *Alternanthera aurea*. Finished potting old echeverias and commenced potting rooted offsets in thumb pots. Cleaned stock geraniums.

15—Tem. 41, 45, 38. NW. to N. Put in propagating bench cuttings of *Alternanthera aurea nana*. Continued potting echeveria offsets in thumb pots. Continued cleaning stock geraniums.

Best Carnations.

My specialty is growing cut flowers of carnations for wholesale trade. For white flowers I secure best results from Peerless, though Hinz's White has done well. I have two houses of Peerless which are looking fine. Of colored kinds Crimson King, Sec'y Windom, Duke of Orange and Mar have done well with me.

This year I am growing for the first time Grace Wilder, Anna Webb and Buttercup. They give promise of a good crop. I have also tried a few plants of Wm. Swayne, American Wonder, Uncle Sam and American Florist. The Swayne died this summer of disease, the American Florist is not very strong, the American Wonder about the same, but Uncle Sam is one of the healthiest of any I have.

Will other growers of the carnation please give their experience with the above named kinds and other new ones. It would save many of us trouble and expense.

GARDEN AND FOREST

An Illustrated Weekly Journal of
HORTICULTURE, LANDSCAPE ART AND FORESTRY.

Edited by Professor C. S. SARGENT, of Harvard.

Every progressive florist should read this new journal. Its pages contain from week to week articles on flowers, their cultivation and the most artistic methods of using them for purposes of decoration. Subjects bearing on the work of florists and the influence of their work upon the public taste, receive special mention. The paper is read regularly by many of the most intelligent florists in the country, who find in it information (especially about new flowers and plants) and suggestions not to be found in any other publication. Now is the time to subscribe.

\$4 00 a year. Club Rate, 5 Subscriptions for \$16.00.

GARDEN AND FOREST, Tribune Building, N. Y.

If you wish to make a Christmas present to your friend, send him GARDEN and FOREST for a year. Every week will increase his appreciation of the gift.

HUGHES' SOLUBLE FIR TREE OIL.

FLORISTS AND NURSERYMEN SHOULD
NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectually all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants; such as ferns, etc., if used as directed. Used as a WASH it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

Dog fanciers should not be without it! It makes a silky coat and produces healthy skin action; kills fleas, and is excellent for washing dogs.

Housewives should not be without it! Used with ordinary household soap it is an effectual DISINFECTANT, BLEACHER AND CLEANER OF FABRICS. It kills insect life on man, animal, or plant, without injury to the skin, wherever parasites may appear.

Put up in 1 gallon tins, \$3 25 Full directions & trade Put up in 1 quart tins, \$1.00 mark on each package.

D. LEE & SON,

MADISON, Lake Co., OHIO.

Louisville Exposition.

The displays of cut flowers were the most elaborate that have ever been seen in this city. C. J. Reimers had, on the first table, a palm tree, the entire trunk of which was encased in roses, and a large crescent of ferns and roses, a scythe of roses and a sheaf of wheat.

Samuel Thompson's "Old Kentucky Home" represented a large mule in white roses just entering the stable of smilax, while in the rear stood the plow in red roses. The fences were represented by fern leaves.

Nanz & Neuner had one of the most striking displays, the principal piece being a full-sized eagle in mortal combat with a huge serpent. They also had a fine display of cut flowers in baskets and various designs.

H. W. Faschman, the wire worker, had a portrait of President Cleveland in a massive floral frame.

F. Walker & Co. had a large and creditable display of various floral designs, including a sickle and wheat, a large scroll with the cross and crown, besides some handsome baskets.

Haupt & Epping had as a central figure a life size horse in flowers. Their other designs and baskets were very pretty. Jacob Schulz's display was very attractive and was the only one that contained any sweet violets.—*Louisville Daily Commercial*.

"15 YEARS' EXPERIENCE. THE GURNEY SAVES 33% PER CENT IN FUEL."Letter from Thomas Gray, of Fitchburg, Mass.,
in reference to**GURNEY HOT-WATER HEATER.**

FITCHBURG, MASS., April 13, 1888.
Dear Sirs:—In answer to yours, asking my opinion of the Gurney Hot Water Heater which you sold me, would say that I have had fifteen years' experience in heating hot houses by water, and must say the Gurney Heater purchased of you has proved itself a wonder, both in power and economy, using one-third less fuel to get same results than any heater I have ever used. The brick-lined pot I consider a special feature, as it renders combustion equal throughout the entire pot.

Yours truly,

THOMAS GRAY, Florist.

**"Perfect"**

(Trade Mark)

Hot-
Water
Heater.

**THE MOST POWERFUL HOT-WATER BOILER EVER CONSTRUCTED.**

These Heaters contain more features for saving fuel and labor, and are better adapted for heating Conservatories, Greenhouses, Dwellings, Offices, Schools and Public Buildings than any other makes of Hot-Water Heaters. By reason of their enormous heating capacity and increased square feet of boiler surface, and positive circulation, they are the only rapid circulating Hot-Water Heaters made. At a test made the 19th of January, 1888, at the works of the A. A. Griffing Iron Co., Jersey City, N. J., (manufacturers of the "BUNDY Radiators")—where all the leading makes of Hot-Water Heaters have been tested—more power was developed, with less fuel, than any heater ever tested there.

FOR "PINUS PONDEROSA and P. Jeffreyi both imported trees of the Pacific forests" (in nurserymen's department of FLORIST October 15), please read—important trees, etc.

FINE PEARS.—Mr. M. P. Dulty, Zanesville, O., sends us specimen fruits of Sheldon (russet variety), and Duchesse d'Angouleme pears of unusual size, one of the Sheldon's measuring 3¾ inches in diameter. Both kinds were very finely flavored.

JAPANESE ANEMONES.—It is now the 20th of October and I still have any amount of Honoring Jobert flowers. Where the rains and wind have not beaten and tarnished them out of doors they are quite good yet and many to open, but where grown in a cold frame now boarded up three feet high back and front and covered over at night with sheeting or sashes the anemone flowers are as fresh and white as snow and in as great profusion as they were in the middle of September. SOCIETY OF AMERICAN FLORISTS.

JOHN N. MAY, Summit, N. J., president; W. J. PALMER, Buffalo, N. Y., vice-president; WM. J. STEWART, 67 Bromfield St., Boston, Mass., secretary; M. A. HUNT, Terre Haute, Ind., treasurer. The fifth annual meeting at Buffalo, N. Y., August 20, 21, 22, 1889.

THE PRINTED REPORT of the proceedings of the fourth annual convention of the Society of American Florists held at New York last August has been received from Secretary Stewart. Certainly every member of the society—and every member of the whole trade—will have reason to be proud of this record of work accomplished by the national society. It bears evidence of careful and painstaking work on the part of the secretary in its compilation, and its typography is excellent. The uniform high character and practical value of the essays presented at the New York meeting was certainly remarkable when compared with those presented at conventions of similar bodies, and these with the interesting discussions on them appear complete in this volume of 190 pages, and we believe that no florist who is worthy of the title can afford to be without it. If you are not already a member of the society send \$2 now to Secretary Wm. J. Stewart, 67 Bromfield street, Boston, Mass., and secure the report for this year. This will also entitle you to membership up to January 1 next, after which the membership dues will be \$3 per annum.

S. A. F.

The printed report of the New York meeting has been mailed to all members whose dues for 1888 have been paid, and should now be in the hands of all those entitled to receive them. A copy of the constitution and by-laws has also been mailed with each report. Any member not receiving his report should notify the secretary at once. Those whose dues are unpaid should attend to the same at once as the number of reports is limited.

THE OPENING DATE of the New York chrysanthemum show was changed at the last moment from Nov. 13 to Nov. 8, hence we are enabled to give in this issue a few preliminary notes on this show. A full report will appear in next issue.

The Orange Chrysanthemum Show.

Naturally it was a success—it always is. Good plants and good flowers—abundant enthusiasm and executive ability together make a very efficient combination for a successful show. There were some few weak points, but they were insignificant amid the general excellence. The weakest point, as at every show of this kind, was the display of designs. There seems no actual reason why a rigid design of chrysanthemums should exist, but people will make them. There were some baskets here which were built on the same model as a store-made birthday cake, round and smooth, with a pattern on top which looked as if it might be made in gum drops. The general effect was enough to bring tears. But there were some few compensating arrangements, in the shape of loose masses of flowers, which were really artistic.

General arrangement? That was much improved by the addition of large palms, backing the plants and thus preventing any bareness. The pyramids of chrysanthemums, such a feature at previous shows, were not really so good this year.

The star of the show was the much heralded "Mrs. Alpheus Hardy," unquestionably the most unique introduction of recent years. One might say the most unique introduction in the entire list of chrysanthemums without being far out. It is a large globular flower, long-petalled like the Japanese, yet in regularity of form resembling the Chinese type. In color, purest white, free from faintest tinge of color, and most remarkable feature of all, the backs of the petals are covered with long silky hair. The effect is indescribably strange and beautiful, it can be likened to a white ostrich tip, and nothing else. One can see at once what an acquisition this must be to the trade. Its keeping quality is as yet unknown, but the texture is thick and firm. It was a lovely sight to see these flowers resting on a bed of adiantum; perhaps the only chrysanthemum which does not become coarse by comparison with delicate ferns. Messrs. Pitcher and Manda were the exhibitors; they possess the entire stock. This flower received special honors. The committee reported on it thus: "New chrysanthemum Mrs. Alpheus Hardy your committee consider is the most remarkable acquisition in the way of new and beautiful plants that has been introduced in recent times."

The orchid display for which Mr. Sander offered a special prize—a magnificent bound volume of "Reichenbachia"—was taken by Pitcher and Manda. Their display included some of their remarkable cypripediums. C. Faircanum, a little gem, C. Leeannum and C. Anthurium were among them. That new lœlia, L. Eyermaunii, was there, a pretty thing. A good plant of Oncidium incurvum with

three tall spikes of bloom, was noticeable; so was a big pan of Cypripedium insigne. The collection would have attracted attention anywhere.

A fine group of decorative foliage plants attracted attention near the door. A big tree fern in the centre; Anthurium Andreanum, with its showy flowers; Pteris oratum, sweet and snowy, and several fine crotons. One oddity with metallic leaves would attract attention anywhere, especially if announced by name. It was Camphylobetris Ghiesbreghtiana. Adiantum Farleyense, Asparagus plumosus nanus, and other dainty plants completed a most beautiful group. Pitcher and Manda were exhibitors, first prize. The same exhibitors received second for ferns—a handsome group, though their finest gleichenia was in the group of foliage plants. First prize for ferns was taken by Mr. Burke, of Short Hills; it included a plant of Adiantum capillus veneris of tremendous size; many authorities declared it the finest plant of the variety extant. It was certainly remarkable.

But this was a chrysanthemum show. There were the usual tremendous cut blooms; one of Mrs. Frank Thompson, exhibited by John Cullen, gardener to Mr. Wilbur, Bethlehem, Penn., was ten and a half inches in diameter. This exhibitor made a fine display of cut blooms.

First prize for 24 distinct varieties in pots was taken by Geo. McClure, formerly gardener to Mr. Spaulding, who was conspicuously absent to the regret of those who remember his former fine displays. Mr. McClure's display was exceedingly fine.

Second prize in the same class was taken by Michael Doyle, gardener to Mr. Ferry.

E. Williams, of Montclair, showed some native grapes—not for competition.

For 10 standards, Mr. Barr first, second Mr. McClure, gardener to Mr. Brown.

Single specimen, first, Geo. McClure; second, Michael Doyle; grafted standards, Mr. Barr first.

Pyramid, Dennis Brachen second, first withheld.

For 50 dwarfs, first, William Barr, superb; second, Geo. McClure.

Cut flowers, first, John Cullen, Bethlehem, Penn.; second, United States Nurseries, Short Hills; third, Geo. McClure. The remainder of the prizes were divided among several, United States Nurseries taking first from four classes.

For best seedling of any section, first, Thos. Jones; second, Geo. McClure.

Best 12 seedlings, Thos. Jones; second, Geo. McClure.

For roses, Mr. May made a regular sweep; five first and two second premiums, a fine exhibit. Mr. F. L. Moore, of Chatham, made a meritorious exhibit.

Mr. McGall took second with his asters, first was withheld.

Best collection of palms, Alexander McPherson, gardener to Mr. Burke, of Llewellyn Park—fine too.

Best cypas, Mr. Brown, Orange, Geo. McClure gardener.

Best new and rare plant, United States Nurseries; second, Mr. Burke.

Seedling carnations, first, John McGowan.

Too much can not be said in favor of the new chrysanthemums exhibited by Mr. William Barr. Mrs. Wm. Barr is a wonderful crimson, incurving petals lighter beneath. Peter B. Mead is perhaps the most remarkable golden yellow, with long tubular petals. Sunset is what its name implies, glorious yellow shading into orange and red. Mrs. Carnegie and Miss Alice Brown are more fine ones. Mr. Barr's exhibit was of remarkable beauty all through; there could be no question of its superiority. Mr. McClure also deserves special mention and Mr. Michael Doyle, all well known as prize takers.

Philadelphia was represented by Messrs. Harris, Lonsdale, Burton and Craig, who with Ernest and Rudolph Asmus, Mr. Henshaw and others, acted as judges. Mr. Fewkes, of Boston, was present. Mr. Pitcher gave a pleasant dinner to these visiting gentlemen, an attention much appreciated.

Mr. May had work enough for two, but he didn't seem to mind it, and there was enough sociability about the affair to furnish half a dozen ordinary societies. It was a grand success, and we only hope it may be repeated for many years to come.

EMILY LOUISE TAPLIN.

Brevities From the New York Show.

At time of writing this show is hardly under way, so it would be obviously unfair to attempt any criticism. It promises well, certainly.

It is held in a large marquee in a corner of Union Square. A flower show in a tent is truly British, and as such should appeal to the New Yorkers. We don't know yet who are the lucky prize takers. Mr. Spaulding makes up for his absence from Orange by a large and fine exhibit; Mr. Barr is here with his beautiful dwarfs and John Cullen, of Bethlehem, has a lot of immense cut blooms. Thos. Tricher, gardener to Judge Benedict, exhibits fine plants and flowers grown out of doors.

Mr. Hamilton came from the pleasant land of Pittsburg, where natural gas and coal trains perennial bloom, to show Mrs. Andrew Carnegie; her first appearance in this form. Description will be given later. Mr. Fewkes brought from Boston a lot of unique blooms, being the batch among which "Mrs. Alpheus Hardy" made her appearance. They are most remarkable; one which may be described as the most noticeable is Lilian B. Bird, a large tubular-petaled flower, delightful shrimp pink in color. Neesima is a strange yellow, and all this batch present marked distinguishing characteristics. Most of the well known exhibitors were present; later report will give their names and honors.

Chrysanthemum designs were poor; the artist who learned bouquet making in a broom factory appears still to be devoting his attention to this flower.

J. G. Bebus had some fine baskets of roses; John Finn displayed his usual taste in plateau and basket of ferns, palms, etc.

Of course Mr. May had some fine roses; also John Henderson and J. H. Taylor. These gentlemen are always looked to for such flowers.

Some good decorative plants relieved the chrysanthemums, and the arrangement as far as can be judged in its imperfect stage, will be effective and artistic. The general opinion is that a well filled marquee is better than a dim and sparsely furnished hall, an opinion in which many will concur. Detailed report in next issue. EMILY LOUISE TAPLIN.

Chrysanthemum Show at Chicago.

Florist M. F. Gallagher's chrysanthemum show at the Eden Musee was an agreeable surprise to local florists. Mr. Gallagher is certainly entitled to much credit for his enterprise in getting up unaided such a very creditable display.

The hall was well filled with plants, and while there were none which might be called really fine exhibition plants, they were arranged in masses of color that created a pleasing effect and apparently excited the admiration of the average visitor more than would the handsomest specimens of cultural skill.

All the plants shown were purchased outright by Mr. Gallagher and the show was given strictly as a business venture. A remarkably liberal feature was that after buying the plants, prizes for best, second best and third best collections was offered. The growers of the plants should certainly be satisfied with this arrangement—be paid for their plants and then secure prizes in addition. The first prize was a large silver fruit and flower holder; second, a large silver cup; third, a smaller silver cup, awarded to Messrs. John Goode & Co., Chicago Floral Co. and John Lane respectively.

The show was continued for a full week, fresh plants being substituted for those which began to look bad. The displays of cut chrysanthemums and cut roses were changed daily, and some very handsome flowers were shown. A table containing handsome specimen blooms of Chrysanthemums Golden Band, M. Delaux, John Webster, Daimio, Mrs. T. Norris, Soliel Levant, White Venus, and other good kinds, some of them decided novelties, attracted much attention.

A very pretty feature was an old tree covered with blooming orchids. A table spread with a cloth of white chrysanthemums on which stood a vase of pink filled with yellow was the only thing in the way of designs, though numerous baskets filled with chrysanthemums and other flowers were scattered through the hall. Blooms of Lapagerias rosea and alba and of Anthurium Scherzerianum occupied a place near the orchids and were admired by visitors as members of that family; one lady pointing to an anthurium remarked to a friend that it was "the largest red orchid she had ever seen."

Two large wicker shoes were filled with chrysanthemums and labeled "Chicago," while two of fully twice the size similarly filled were labeled "St. Louis." This caught the crowd, but a St. Louis lady who visited the show took the liberty of transposing the signs and they remained so for some time before discovered, so the joke worked both ways.

The roses were arranged in vases with a bit of Adiantum Farleyense in each. This added much to the general appearance of the table. The ownership of all plants and flowers by one individual permitted arrangements and changes that would probably have been impossible under the usual circumstances and the general effect was undoubtedly heightened in consequence.

In spite of the large outlay the show was a financial success which is certainly gratifying. A bulb show under similar conditions is promised for early spring.

WE UNDERSTAND that the chrysanthemum show at the Cincinnati exposition occurred as announced, but strange to say have been unable to obtain any facts, even in response to requests. Can it be possible that the Cincinnatians were unable to make it the howling success that was anticipated? Speak up Cincinnati.

John Henderson.

The retirement of John Henderson from active business on the first of October of this year, is a noteworthy event in the history of American floriculture. Mr. Henderson comes of a family famous in horticulture; his father was E. G. Henderson, well known as the late head of the large nurseries at Pineapple Place, London, England.

The subject of this sketch came to America about forty years ago, being then in his thirty-first year. What occupied his busy brains and hands for the first fifteen years of his residence in this country is not known to the writer, who first knew of him as a partner of the late John Taylor in the florist business at Bay Side, Long Island, N. Y. At that time the firm grew a miscellaneous collection of plants, and were the first to send cut flowers to the New York market in any considerable quantities. Mr. H. superintended the growing of the plants and was then, as now, an adept in all that pertained to plant culture. He was the first man in America to organize and carry to practical success, a chrysanthemum show; the show was held at Bay Side, and while far behind many of the shows which are held all over the country in these latter days, it was a revelation to most of the visitors at that time.

He remained in partnership with Mr. Taylor for ten years and then removed to his present location at Flushing, L. I. At this place he turned his attention to the growing of the better varieties of zonal and other pelargoniums, fuchsias and a few other soft-wooded plants; these he grew in what was then considered immense numbers and the fine specimens he turned out have seldom been equaled, and never surpassed, even with all the added experience up to the present time; the good work in this department and the quantities he sent into New York raised the standard of the successful market plant in that vicinity many degrees; he really taught the New York florists of that day how to grow such plants to perfection. A few years later he abandoned the growing of these plants in pots on account of the distance from New York, which entailed considerable expense in delivering them, and turned the whole of his now immense area of glass into the cultivation of cut flowers; in this branch he has been pre-eminently successful.

He has done more to raise the standard of cut flowers than any man in this country; he has been a pioneer and leader in growing most of the flowers that have been popular in the past quarter of a century, and has been the introducer of more sterling good things; to him we are indebted for discovering the merits of that most useful of all roses, Perle des Jardins; he also, before any of his brethren in the trade were aware of its good qualities, was growing thousands of Papa Gontier; he raised and introduced the

NEW WEDDING VEIL CANOPY.

Snowdon carnation; the hardy pink Mrs. Simpkins (Snow), and many other plants most useful in their day; his recent success in forcing magnificent blooms of Magna Charta and other hybrid roses, in immense numbers in the early days of winter, are too well known to need more than mention.

While dwelling on his remarkable success in his private business his discharge of public duties as a horticulturist and as a citizen must not be overlooked; he it was who resuscitated the New York Horticultural Society some years ago when it had lost nearly all its members and showed but few and feeble signs of life; and as a result of his force and energy (with the assistance of a few bright spirits notably Wm. Davidson, the secretary at that time), there was thrown open to the public the grand horticultural exhibition in Madison Square Garden, which has never been equaled in this country, and which was financially and in every way a grand success. It is sad that the New York Society has again fallen into a dormant state, but even now, with all the lamentable lack of interest, something

good from John Henderson is to be seen at every exhibition.

Mr. Henderson has also been one of the strongest supporters of the Society of American Florists and has been present at all its conventions; at the first meeting he told the younger brethren the secret of his success in life; it was constant, persistent work. "When I came to this country," he said, "my time was from 4 o'clock in the morning until dark at night." That constant work in gardening, if coupled with a temperate life, does not hurt the health, his present vigor of mind and body amply testifies. He also, in addition to his work as a horticulturist, has for many years found time to discharge the duties of village trustee in Flushing; is an active deacon and trustee in the Episcopal church; is president of the Niantic Club of Flushing; vice president of the Flushing savings bank, and has been one of the most active spirits in the building of the recently finished charity hospital at Flushing, to which he donated five acres of ground, admirably located, on which the new building now stands.

His love for flowers began with infancy and shows no sign of abatement, and while he has retired from active work to a richly deserved rest his interest in flowers, especially what he calls good flowers, will doubtless only end with his life.

The new firm will be known as the John Henderson Co., and the former manager, Charles Anderson, (now a partner in the new concern) will remain as superintendent. His many friends can wish him nothing better than a continuation of health and of the success he has already achieved as a grower of first class flowers. The new firm is, perhaps, the very largest concern in the country, and starts with the brightest of prospects and their establishment will doubtless continue to be one of the most interesting of places, always worth a visit from any one interested in the forcing of roses, which has become the great specialty in the Flushing greenhouses.

Philadelphia, Nov. 6.

R. C.

New Wedding Veil Canopy.

A high panel with gothic top is formed of wire work covered with adiantums and roses. A tiara of orange blossoms extends from this like the top of a canopy, and from this falls a bridal veil which is worked out with orange flowers, lily of the valley and bouvardia in a lace pattern. Both slender silver wire and net are used for the foundation of the veil. Palms are placed each side the panel at the base. Klunder made this elegant design.

F. A. B.

Naming Plants.

We all are very anxious to raise some new and worthy plant and reap the credit and the profit that should belong to us as the originators and disseminators. This is our legitimate right. As soon as we have raised a good thing and we know it to be good we wish to give it a name, and as we have been the raisers of it, it is only natural that we should name it after ourselves, for instance geranium James Brown, carnation John Smith or chrysanthemum Robert Jones.

Now if we of ourselves are capable of pushing our new namesake for all that it is worth and we wish almost exclusively to command the sale of our own raised plants, this is all well and good, and Brown can cry aloud for Brown till he is tired, and Jones yell out for Jones with all his might, and so on. But if you do not wish to confine the sale of these plants within yourselves and would wish to have your brother florists also take hold of your plants and help you boom and sell them, then let Brown name his geranium Bonfire, Smith his carnation Spitfire, and Jones his chrysanthemum Golden Ringlets. Then all of you can join in the booming and selling of the same plants without advertising one another. Brown won't if he can help it mention the names of either Smith or Jones in his catalogue because they are his rivals in business; for the same reason Smith won't mention the name of Brown or Jones, and you can't blame Jones if he too ignores his competitors Smith and Brown. Expatiating on the narrowness of this policy is all bosh, it's human nature and it's business too, and it is precisely what is practiced every day of our lives.

Remember that the names that are easily spoken, easily understood and easily remembered are the most profitable names because they appeal to the masses, and at all times strive after des-

criptive names—names that will in one word convey some idea of what sort of plant it is. We seem to have a craze for naming our varieties with people's names for instance, Fuchsia Henry Clay or Gladiolus Mrs. Cleveland; well, this may be all right, but as these names convey not the least idea of what sort of fuchsia Henry Clay may be or gladiolus is Mrs. Cleveland, the florist who has an eye to business should renounce the idea of the Mr. Crowley and Miss Kitty names and give us something that will mean something.

WM. FALCONER.

[We heartily concur in the views above expressed.—ED.]

Madame Gabriel Luizet.

The H. R. rose Madame Gabriel Luizet, the subject of illustration on page 131 in last issue was sent out by Liabaud in 1877 or 1878.

The flowers in the "cut" hardly do justice to the variety, as to size. It may not be as large as Her Majesty, Paul Neyron or Baroness Rothschilds, but it will compare favorably with any other variety in general cultivation. In color it is a delicate silvery pink, pronounced by many to be the most beautiful shade of pink in cultivation. It may become lighter after having been cut a few days, but it never gets tinted with purple. It is deliciously fragrant.

It was not until 1882 that it began to attract the attention, in this country, to which it is entitled. Its popularity has been steadily increasing ever since. It would have been more generally cultivated long ago, had it not been so very difficult to raise from cuttings—both hard and green wood. The people in this country have a prejudice against budded or grafted roses, and a decided preference for "own root" plants, which has retarded its general dissemination to a great extent. It seems to have yielded more graciously to the propagators' art within the past year or two, for it is now met with in most of the prominent rose catalogues.

No rose, among the H. R's, is hardier than the "Luizet." It gives universal satisfaction wherever planted out, but it is as a forcing rose that it commands attention and admiration. It will bloom from ten days to two weeks earlier than Baroness Rothschilds in the same house, under exactly the same conditions.

The flowers shown in the photograph from which the illustration was made were cut last February. It "breaks" free and every shoot produces a rose. As an exhibition sort it ranks as the best in England; actually heading the list according to the London *Journal of Horticulture* of Oct. 11, last. It will be a long time before Mme Gabriel Luizet is displaced, as a rose for general purposes.

Philadelphia. EDWIN LONSDALE.

Permanent Beds and Raised Benches.

Your correspondent J., on page 131, asks why the old system of growing tea roses in permanent beds was abandoned.

I do not know of any better way to answer his question than to give my own reason, which I think I am correct in saying is the same that governed so many others.

When I grew roses in permanent beds I found that the roots in spite of any amount of drainage would gradually travel downwards in search of moisture; this caused them, after the second year particularly, to often stand still for a long time during the winter when roses were most in demand, but in the spring gave immense crops of buds. After reasoning this matter over I tried the bench system as much less laborious and less expensive than the pot system. At first we made the benches eight to ten inches deep thinking it was necessary to retain the plants in steady vigor. This we found a considerable improvement so far as it went, and the balance at the end of the year was considerably in favor of the new system. But we had to use great care in watering during the winter and gradually we reduced the depth of soil and continued to find it an improvement all around till now my best benches of roses are growing in not more than two and a half inches of soil.

And any one who will give the two systems a fair and impartial trial will I think be convinced that there is more profit in growing them on raised benches than in solid beds, no matter how well they are drained.

I do not wish to say that roses will not do well planted out in permanent beds, but what I wish to say is that count every item of expense carefully and then balance the accounts at the end of the year and the benches will have considerable to their credit. At least such has been my experience, after many and repeated trials.

Summit, N. J.

J. N. MAY.

Marie Van Houtte.

[Synonyms "The Gem," *Comte de Griseval*, and other names.]

I would like to tell what I know about this rose that has been sent out under the name of "The Gem."

First I will say that it is an old variety, Marie Van Houtte, raised by Ducher and sent out in 1871. I will state why I am so positive about this rose being Marie Van Houtte. For several years I held the position of propagator in two of our large rose-growing establishments, where there were 500 varieties cultivated and 5,000 or more of Marie Van Houtte raised every year. In handling so many varieties any one that has a desire to know one rose from another can soon learn the characteristics of the many varieties and they will seem quite distinct. One characteristic of Marie Van Houtte is that on nearly all new growth can be found small dark colored thorns, very soft and numerous. This is peculiar to this rose; I don't know another variety so marked in this particular. A close observer can find in all roses some particular mark that they can easily be distinguished by. I think this one of the best ways to study the rose; the color of the flowers and the size often vary, but certain characteristics can always be found. When this variety was pointed out to me as something new I recognized it at once as Marie Van Houtte. We have no duplicates of nature and as this rose they call "The Gem" is identical with Marie Van Houtte there can be no mistake about it being one and the same thing.

I hope all florists will satisfy them-

selves about this and not put it in their catalogues of '89 as something new. There are a great many plants sent out under two or more names and I hope that the committee of the S. A. F. will at once get to work and pass on all new plants sent out. With their endorsement there would be less trouble in this direction and we would know what we are growing without paying a high price for something that we have already on the place.

I have 100 plants of Marie Van Houtte which I am growing for cut flowers, and from the way it is growing I believe it will be a good rose for forcing. It is a very good bloomer, the color and size is something to be admired. Although the color is not distinct it can be used with good effect in funeral work. There are certainly none better for out-door culture; it is quite as hardy as Safrano, in this section a very free grower, and not subject to the many diseases of the rose.

Chester, Pa.

D. T. CONNOR.

[While "The Gem" is acknowledged to be some old variety from which the label had been lost, the fact remains that several acknowledged rose experts who have examined the plants at Mr. Ramsden's place state that it is not Marie Van Houtte.—ED.]

Mme. Andre Duron.

The notes on the rose Madame Andre Duron are somewhat conflicting and I may say do injustice to a most magnificent hybrid tea variety. There is evidently a "mix" somewhere, for Mme. Andre Duron with us is exactly as described by the originator and introducer, M. Bonnaire. The description reads: "A beautiful, fresh, clear red, very large and often equal to Paul Neron in size." Now, a rose answering that description is very far from Apolline, and still farther from resembling Sir Joseph Paxton as noted in the clipping from the *London Garden*. There is evidently a case of some kind of substituting for we feel sure we have the genuine article. I send you blooms of the same for your inspection cut from young plants.

I might add that with us the rose gives every promise of being a most free and continuous blooming variety; as much so as La France or any of the hybrid tea varieties. Mr. Henry Bennett commends this rose quite highly in a letter received from him some time since, and believes it will rival our Am. Beauty for the same purpose we put A. B. to in this country. We flowered a dozen plants of this variety last winter and from the manner in which it behaved we took a great liking to it and believe the rose has unquestioned merit for American growers. Let the credulous dismiss their doubts, for it is entirely distinct from either Apolline or Sir J. Paxton and in no way resembles them.

Richmond, Ind.

E. G. HILL.

[The roses sent were certainly very distinct from Apolline and Sir J. Paxton.—ED.]

Is It a Theory?

In the issue for October 15 Mr. Craig attributes the healthy condition of his Perles to the fact that they were cuttings taken from imported stock. This is a fact that we will no doubt all eventually recognize; not that it is necessary to send to Europe for our stock, but that a constant interchanging between the growers of different localities will be a very great

PRIMROSE DAME.

aid in keeping up the health and vigor of standard varieties of roses, carnations, etc.

It was, and perhaps is yet, a custom among English gardeners to exchange cuttings of geraniums, etc. in order to keep their stock from degenerating. Darwin in one of his works, which I unfortunately have not at hand for reference, gives a number of experiments in proof of this method of keeping up and improving the vigor of plants.

I have seen cuttings taken from the same plants, one lot by the owner and another by a florist from a different locality, and those taken to the different locality were vigorous and healthy to a remarkable degree, while those grown by the owner were weak, and before the season was over two thirds were dead. As both growers used the same methods it certainly looks as though the change in locality was the cause. This matter is worth observation and consideration.

Lancaster, Pa.

A. M. HERR.

French Roses.

On page 130 you quote from the *London Garden* that they consider the new

rose Madame Andre Duron identical with the old Bourbon variety Sir Joseph Paxton.

I think there must be some mistake in this somewhere, as I have this variety received from two different sources in Europe. Both are true to name I feel certain, but they are certainly not identical with Sir Joseph Paxton and while I do not consider they are identical with the old Appoline, yet they very much more resemble that variety than the first named. It appears to be a free blooming variety judging from the plants I have had growing here some months, and probably it will prove of value on further trial, but it certainly, in my estimation, does not come up to anything like what it was represented to be to me. One party wrote me from the other side that it would rival our American Beauty. Well, I do not know in what way it is to do it, for certainly in color, size or fragrance it is nowhere in the race with that standard favorite. But perhaps I am premature in my estimation (I hope I am), but we get so many grand things in name from the raisers, and after one or perhaps two years trial they very many of them go to decorate the rubbish heap.

Very many of our rose growers are getting tired of spending large sums of money on such worthless things, and the sooner the raisers of new roses and other novelties for the American market learn to retain only such as are of real merit the better it will be for them and their business. For while our people are ready and willing to pay a good price for a really good thing, yet they to-day are just as good judges of good roses as any of their European brothers and are much quicker to resent any unfair dealings. Let the raisers elevate the standard of quality before they can expect us to buy in the future.

Summit, N. J.

JOHN N. MAY.

Primrose Dame.

Mr. Hunt in qualifying his remarks made at the New York meeting on this rose in your last issue, exhibits a fear lest he may have said too much in its favor. Now I would go even farther than Mr. Hunt, and recommend this rose to every one who has use for a beautiful rose.

Grant that it does not equal in size Perle or Mermet, yet it presents charms, and beauty of coloring not to be found in any other forcing rose. I make this assertion and add that it will produce five buds where Niphotos or Perle will produce one, and where good culture, and its special wants are considered it can be grown nearly equal to Niphotos in size.

But as Mr. Hunt remarks, where good quality, and quantities of buds are required give Primrose Dame a trial, and when once you have strong plants, this beautiful rose will not need any help to win its way into your favor.

In growth it is weak when small, but with good culture, it can be grown into strong, healthy bushes. I send you a few blooms for inspection.

Richmond, Ind.

E. G. HILL.

[The blooms sent were of about the size of a medium Perle, in color a pale yellow deepening to apricot in center. Certainly a charming rose, though stem weak and foliage rather small.—ED.]

The Blue Rose Again.

And "Nemophila blue" at that! Cox, Crews & Co., of Gloucester, Eng., in their pamphlet just received tell us that they not only have actually that *rara avis*, but a great many other before unheard of wonders hitherto unthought of in the horticultural world.

They have got an orange the skin of which is so transparent that the luscious pulp shows through it. They have got a cross between the black currant and the gooseberry, a bona fide *black gooseberry*. And a hybrid between the plum and the peach, and other things of like ilk.

Are we Yankees going to be beaten? Where are now our venders of the "Blue Roses" that flourished a few years ago, the gentlemen that offered their wares each spring from New Orleans to New York? What has become of them and of their strawberry trees that bore strawberries like cocoanuts? Where are their blue apples as big as pumpkins, why do they not now tell us where such things can be got, through the advertising columns of the *FLORIST*, or other horticultural magazines just as Cox, Crews & Co. are doing through the London floral magazines? Does the *AMERICAN FLORIST* question the existence of these wonders of the vegetable kingdom that it has failed so far to advertise them? Does it mean to set its hardly fledged

existence against the opinion of the venerable *Garden and Chronicle*, who evidently do not question the wonderful story, as their publishing the claim endorses it? PETER HENDERSON.

Jersey City Heights, N. J., Nov. 3, 1888.

[The AMERICAN FLORIST would certainly not admit to its columns an advertisement of such impossibilities as those described in the adv. mentioned. The blue rose confidence game is now so venerable that it bears moss of immense length, and that any one should attempt now to work such an ancient swindle through the horticultural press shows a remarkable confidence in the gullibility of the public. And that horticultural papers of high standing should admit advs. of such palpable swindles is indeed surprising.—ED.]

Substitution.

We give below a copy of a card posted up in the packing room of an establishment doing a catalogue trade, for the instruction of employes filling orders. This concern indignantly denies that substitution is ever practiced at their place, but admits that "errors will occur in spite of every precaution." After perusing this card it would seem that it would be largely an "error" for a customer to get even one variety ordered true to name.

Perle des Jardins	Safrano, Jean Pernet, Mme. Margottin, Isabella Sprunt, Marie Van Houtte.
Duchess Edinburg	Mme. de Vetry, Aline Sisley, Souv. de David.
The Bride	Cels. Tea, C. Cook, Bella, Mlle. Rachel.
Mabel Morrison	Coquette des Blanches, Olga Marix, Perfection des Blanches.

We are informed that the list is changed from time to time to suit the stock on hand. No wonder that they are always able to "fill complete" any order received.

Let us no longer dally with this matter. Decisive action is necessary. The substitutor is a criminal and should be punished as such. He is guilty of obtaining money on false pretenses.

If the trade or the national society would crush out this practice let them take legal action in every case where conclusive proof can be obtained. Fear of the consequences would then deter those who have lost all sense of honor. The FLORIST stands ready to publish to the trade the names of any who may be convicted.

Catalogues.

Are we not over-doing this catalogue business? We receive catalogues with long lists of plants, from concerns which would probably find it difficult to house one plant of each kind that they catalogue. Such concerns must certainly have greater temptation to practice substitution than larger ones, and it seems to be almost irresistible to some with acres of glass. Is it wise for these very small concerns to issue such a catalogue? We believe that it is not in the majority of cases. Don't try to do too much! Don't attempt to do both a local and catalogue trade. And above all don't send out a catalogue until you are able to spell at least a few of the plant names correctly.

Notes.

I grow carnations almost wholly, selling the flowers at wholesale in Boston. Three quarters of the whole are white; crimson next, then pink, yellow and variegated.

Locality seems to have much to do with the success of varieties. Twenty years ago DeGraw was my best white; now I have given it up on account of disease.

I have tried a large number of sorts from different sources and have grown a great many seedlings. Some of the latter are becoming widely known. Among them Anna Webb, Florence and Silver Lake are some of the best. I have this season a number of new ones of my own on trial, and some that I purchased. I have Anna Webb for crimson; Florence, soft scarlet; No. 82, (new) a fine early white; No. 84, dwarf white; No. 81, pure lemon yellow; No. 89, Naples yellow; No. 88, yellow shaded red; Silver Lake, late white.

Silver Spray made a good growth in the open, but the last of August the lower leaves began to turn yellow. Since putting in the house it is doing better. It is early, the flowers large, somewhat loose petaled, and some of them split. I look for fine flowers later on.

White Gem is not an early pink. A few straggling stems have bloomed. The flowers are very full, sweet, and in clusters. The main crop is yet in the future, probably not before February, and promises to be abundant. This also lost its lower leaves while in the open ground, but is now looking nicely.

Wm. Swayne made only a moderate growth, and the excessive rains in August caused the lower leaves to die with the others. It is now in flower, looks healthy but the plants are small. It is dwarf, flowers large, of good substance and very sweet scented.

L. L. Lamborn is also dwarf, flowers very white, larger, and plants are stronger than Wm. Swayne.

Daisy is another white purchased. It is only a moderate grower, but is healthy having scarcely lost a leaf. Flower good size and shape, dwarf, and medium early.

I had American Florist last winter and it died on the bench. The color is novel.

Grace Wilder seems to be the best pink carnation, healthy and early, but gives a good many imperfectly colored blooms.

Of Grace Fardon I have two plants, but it makes no show beside Grace Wilder so far.

Mrs. F. Mangold is a good pink, rather late, but gives nice long stemmed flowers. I do not succeed with Boule de Nieve, it being liable to disease.

Buttercup does not flourish on my light soil. The same with Hinze's White.

I find it a good way for me to grow a number of different kinds of the same color, to secure a constant bloom by the different sorts coming into flower successively. S. F.

Framingham, Mass.

Best Carnations.

In reply to F. H. P., page 144, can say that Buttercup is fine with me. Swayne,

Lamborn, E. G. Hill and Mrs. Cleveland are fine growers, splendid bloomers and perfectly hardy. W. W. Coles is diseased with me. Anna Webb makes a good many bad flowers. Alegatiere is not constant in color and don't bloom rich, but sometimes the flowers are fine. Hinze's White and President Garfield are A. No. 1 with me, but the last named is coming a little late. Mrs. Garfield is good for a light pink after Jan. 1.

Hamilton, O.

THEO. BOCK.

Fireplace at American Institute Fair, New York.

"The Hanging of the Crane," a prize design at the American Industrial floral display was worked out with great care and precision. The mantel-piece was composed of ivy, and there is an ornamental cluster of purple asters on one side, and a sprig of nightshade berries on the other side. There is a cricket on the mossy hearth. Andirons are of golden rod and the flame is swamp alder berries. There are ferns and Virginia creeper on the shelf.

Long Island Plant Notes.

BY WM. FALCONER.

COLEUS GOLDEN BEDDER was the first to succumb to cold and wet.

THE WHITE DAY LILY is one of the commonest garden plants in country gardens; we find large clumps of it on every hand in old-fashioned village gardens and farmers' yards. But if a gardener or florist should ask for a clump just see how quickly the village lady believes her day lilies are worth something, and it isn't an ordinary but an extraordinary value she immediately sets upon them. At the same time we must admit that it is one of the scarcest plants in the trade to-day. I question if there is a firm on this continent who can supply 500 plants of it. I propagate it by division only. It has never ripened seeds with me. It loves rich moist soil and at all times a shady place to grow in. Although it can be grown fairly well in open sunny quarters, to have it in perfection we must give it shade.

VINCA ROSEA is one of the finest summer garden plants in existence. From the time it is three months old as long as it lives, be that one year or twenty years, it is continually in bloom. The typical form has rose-purple flowers; one variety has pure white and another white with red eye blossoms, and these last two are the prettiest. I use all three and in quantity, but I never keep over an old plant, nor raise a young stock from cuttings as European books advise us. I save the seed in September and raise my young stock from seed sown in winter or early spring in a warm greenhouse. The young plants love heat, and when plunged in a brisk hot bed in March or April become "o'er a' the ills o' life, victorious." By the middle or end of May they are fine stocky plants in bloom, taking plants for the market and in excellent condition for planting out. They hate shady places and dislike wet feet. They dearly love open sunny quarters, warm soil and rich if you like to make it so. Plant them in masses if you wish to enjoy them. Sometimes we have a lot of early summer flowering plants which, as soon as they have done blooming, should be cleared away. We can supply their places with coleuses, geraniums, French marigolds or zinnias, or with

FIREPLACE AT AMERICAN INSTITUTE FAIR, NEW YORK.

these viucas. I use a lot of this vinca for this purpose. It doesn't wilt, it isn't scraggy, it is in bloom when set out and it continues uninterruptedly in blossom all summer.

THE ABYSSINIAN BANANA.—"Well, now I am glad that I have brought you something that you have not got," said Benj. C. Towusend, of Bay Ridge, to me one day last June as he gave into my hands a small plant of *Musa ensete* in a little pot. In the side of a large bed on an open sunny slope and dry sandy land I had a big hole made and filled with a couple of barrow loads of manure and there planted the banana. It grew immensely and by the end of September some of its leaves were seven feet long. Then I shortened back all of its leaves except the center ones which were not quite unfolded, dug up the plant and shortened back its roots enough to allow me to set the butt into a 12-inch pot which it fits snugly. In this way I will winter it in the greenhouse, then plant it out again next summer. No wonder the people extol the grandeur of this tropical giant in the flower garden. As it never produces any suckers it is always propagated from seeds.

THE PEPPER-TREE, OR CHILI PEPPER is familiar to everybody in the southern part of California. It belongs to the sumach family of plants and is a small or middle sized evergreen tree, a native of Mexico and South America, and now extensively cultivated as a garden shrub or tree in California, where its graceful habit, evergreen character, beautiful foliage and aromatic fragrance render it a great favorite. It ripens seeds abundantly and the seeds are cheap and they germinate readily and the seedlings grow

with the greatest freedom. These seedlings raised in February may be six inches high in May. Then plant them out as a border to a sub-tropical bed in a warm sunny place and you will have one of the loveliest bands of green your heart can desire, and in passing by it you can not resist the temptation to lower your hand and pluck a leaf and squeeze and smell it. And it will be such a border that you don't find in everybody else's garden. If you wish to you can lift, cut back a little and pot a few of them to winter over in the greenhouse, for they are not hardy, but what's the use of all this bother and lumbering up your house room besides, when you can buy the seeds so cheap and raise a stock of fresh plants so easily from seed every year. But they make capital pot plants if they are grown along in pots from the first. Planted out they grow from 12 to 18 inches high the first summer from seed and bushy in proportion. We raise them in this way and enjoy them exceedingly.

Adiantum Farleyense.

I notice a statement in W. W. Coles' note on ferns, in your last issue, that *Adiantum Fergessonii* is a better grower than *A. Farleyense*.

I am very sure that no *Adiantum* is easier of cultivation than *Farleyense*, and I have yet to find the *Adiantum* that can be grown into such a large specimen in one season. I started last April with a plant that the fronds had been nearly all cut from for decorative purposes the previous winter. This plant was in a 10-inch pot; it is now in an 18-inch, and measures over four feet through and is still growing freely. The plant sits on

the top of a twelve inch inverted pot and the fronds are almost touching the bench, completely hiding both pots all around.

I cannot understand why so many find this noble fern difficult to manage. I do not claim to have any special method of cultivation. I use for all my *Adiantums* (with a few exceptions) nice fresh loam with an abundance of well rotted manure. I am also very careful to provide perfect drainage by using a liberal supply of fresh sphagnum over the crocks. I find it immaterial in what way they are watered. In summer I invariably water with the hose, and no need to be afraid of wetting the fronds (old cultivators advise to the contrary). When the roots have taken a good hold of the soil give an abundant supply of water, so that it will soak entirely through. In warm weather do this twice a day. There is no danger from over watering in warm weather, but once let a large specimen of this fern get dry and we may say good bye for the season. JOHN DALLAS.

Fairfield, Conn.

Asparagus Plumosus and Var. *Nanus*.

In answer to your correspondent, page 140, relative to these plants, I may say that they only differ from each other in their habit of growth. Though the dwarf variety certainly has a tendency to climb and under good cultivation will often attain a height of ten feet, its normal height is under two feet. In addition to this the stems are much more slender and tufted than in the type. All of our plants of *Nanus* grown under ordinary stove plant treatment are under eighteen inches in height and may easily be mistaken for ferns.

Kenwood, N. Y.

F. GOLDRING.

Asparagus Plumosus.

A Tyro wishes to know the distinction between *Asparagus plumosus* and *A. plumosus nanus*. The *plumosus* has a tendency to climb, but in the *plumosus nanus* there is no such tendency whatever. I have grown the true *plumosus nanus* for four years, and it climbs no more than an *Adiantum gracillimum* or *cuneatum*.

THEO. BOCK.

Hamilton, O.

Hydrangeas.

Will you please allow me through the AM. FLORIST to ask the best treatment for tender hydrangeas? I had about twelve or fifteen two years ago, kept them in a house with mixed plants, growing all winter. They came out in the spring all right with large clusters of flowers and sold at a good profit. Last year I bought a hundred or more, gave them the same treatment and lost nearly half before spring, and none of them did well.

F. H. P.

Foliage Beets.

In a former number of the FLORIST a correspondent mentioned the foliage beet as somewhat of a humbug. At that time when the plants were small I entirely agreed with him and destroyed all mine but six. They grew wonderfully and have been very ornamental all summer and fall and now at this writing (Oct. 29), they seem more desirable than ever, as the frosts which destroyed other foliage plants seems to have added to their beauty as they are more brilliant than ever. They have grown about two feet high, the foliage is bronze red, the

leaf stock bright scarlet with yellow center. Altogether I think they will prove a grand plant for the park or lawn.
St Joseph, Mich. T. A.

Seasonable Notes.

BY WM. FALCONER.

Examine your own collection, take careful notes and do some heroic weeding. Discard and spare not all poor, weedy flowers and plants of mildey, delicate constitution.

Full double flowers are most desirable and in greater demand than are semi-doubles or singles.

Pure white, pure yellow and glowing crimson colors are more popular than are purple, red or mixed colors.

Flowers with stout, stiff necks are preferred for home or market use to weak-necked drooping blossoms.

The largest blossoms are the most admired, no matter how double and perfect in form and bright in color the small flowers may be.

From seeds saved from the choicest named varieties and hand-fertilized flowers we seldom get more than one plant in a hundred worth perpetuating, often not as many.

In light airy houses and with a little fire heat in cold, dull or damp weather we get our finest flowers.

Chrysanthemum flowers from plants growing in the open air are of a darker or deeper hue than are those grown under glass; what should be white indoors often comes purple tinged under open air treatment.

Eighty-five per cent of first year seedlings have good, vigorous constitutions, and ninety-eight per cent bloom the first year from seed.

Among hundreds of seedlings I have observed that what was very early last year is only early or second early this year or vice versa.

If any of the seedlings you saved and named last year are not as good this year as they were last, don't you think the proper thing to do with them is to cut off their flowers, then pitch their roots and bodies into the rot pile?

Visit the flower shows and take notes, but particularly avoid getting bewildered among the multitude. Be severely critical and insist upon general excellence, distinctness, size, fullness, brightness and purity, and if there is any doubt about any point give yourself and not the flower the benefit thereof. The already vast and fast increasing multitude of varieties compels this severity.

For general purposes lean favorably toward the varieties that produce a large number of good flowers upon a plant rather than towards those that produce only a few extra sized blossoms and these with extraordinary effort. And for this purpose you must give more attention to the plants in pots than to the cut flowers upon the exhibition table.

Extra early, also extra late good chrysanthemums are often more profitable than are those that bloom in the flush of the season. Keep an open eye in this direction.

Cypripediums.

The United States Nurseries, Short Hills, N. J., is believed to have the most complete and extensive collection of cypripediums known, and they are about to issue a catalogue containing a complete list.

The cypripedium is believed by many to be the coming flower for general stove and greenhouse collections and is already a favorite with leading orchid amateurs in both Europe and America. The enthusiasm for this charming genus, has been gradually increasing for years and the hybridists' skill and energy are being exerted to the utmost to increase and improve upon existing varieties, while numerous collectors are searching the unexplored tropics for new species. The existing varieties of the various species and hybrids are already so numerous and distinct, that one never tires of their beauty. A good collection possesses a daily interest, and furnishes blooms throughout the year. When small plants are procured they gradually grow into valuable specimens, so that they increase yearly in value, and become a good investment.

Their culture is simple. To be grown to perfection, they like abundance of moisture and plenty of drainage, being potted in peat fibre alone, without soil—given a temperature of 60 to 65, with ventilation and shading from direct rays of the sun.

No cut flowers blend more charmingly with roses than orchids. They are noble and beautiful in themselves, unique and graceful in form, rich and delicate in coloring, of great substance and durability. Their flowers last for weeks even after being cut.

Those who have never grown cypripediums should begin with a few of the leading species, and add to their collections as interest in them develops.

A series of articles on the cypripedium by W. A. Manda appeared in volumes 2 and 3 of the FLORIST.

Substitution.

A western florist writes that he ordered a quantity of young Bon Silene roses from a wholesale grower at a distance, and in due time received a box containing the number of plants ordered, but when some of them bloomed the flowers were small, nearly single, a dirty white in color and about as far from Bon Silene as could be imagined. He wrote the firm but could not obtain a satisfactory reply. A draft for the amount was presented through a local bank, payment of which he refused, and asks for advice as to his future action in the case.

We have answered a number of such queries by letter feeling that talk on such a matter would seem superfluous to most of our readers but as the number seems to increase we will endeavor now to relieve ourselves from any future letter writing on this subject.

If you order one variety of plants and the concern your order from sends you something else, return them at once. If you ordered beef from your butcher and he sent you pork you would send it back at once and insist on having what you ordered, wouldn't you? Well, the two cases are identical. There is no earthly chance for argument one way or the other. But if you should keep the pork and use it you would expect to pay for it wouldn't you? If you wanted the error corrected you would return the article you had received or let the matter go and pay for what was delivered.

With plants it is not always possible to tell at once whether the same are true to label or not, therefore you should accept them as correct until they prove otherwise. But when they have advanced to such a stage that they may be proved something different from what the label calls for the time to return the plants has arrived. First advise the shipper of all the facts in the case, and a wise precaution would be to call in some of the local florists to inspect the plants that they may be competent witnesses in case of necessity. In your letter to the shipper state that as the plants are not what you ordered you have no use for them and request that he advise you as to what disposition to make of them, also that unless other orders are received you will return the plants. If no reply received within a reasonable time pack up the plants as carefully as possible and ship. It don't make any difference what stage of growth or condition the plants may be in—even if they should be in such condition that they will be certainly killed by the operation, your duty is to at once return the goods, after you have used due diligence in notifying the party and have received no response.

Of course it is presumed that you have kept a copy of your order and of all correspondence with the shippers. If the case came to a suit it would be incumbent upon you to prove conclusively that the plants received were *not* what you ordered; that you used due diligence in notifying the shippers of the fact and waited a reasonable time for instructions before returning perishable goods; and that the plants returned were the identical ones you had received from them.

Some will say that they wouldn't go to this trouble for only \$10 or \$15. "I'll settle this bill, but they will never get another order from me," is a remark frequently made. We do not believe in this way of doing business. It is not business! If an error has been made by a reputable firm they will be glad of an opportunity of rectifying it, and if it has been made by some disreputable concern you are injuring the whole trade by paying tribute to a sharper. Insist on having what you order, and when you get what you order pay for it as per original agreement. Deal honorably with all men and exact the same treatment in return.

Long Credits.

We want to say a word about long credits. These are most expensive luxuries and it is remarkable how many indulge in such costly things. There are few wholesale houses that give a credit of 30 to 60 days on bills of goods that do not allow from 3 to 5 per cent off for cash in 10 days, and some Louses allow as high as 10 per cent. When you take a credit of 60 days from a house that allows 5 per cent for cash you are paying for the use of that money at the rate of 30 per cent per annum; on a credit of 30 days from a house that allows 3 per cent for cash you are paying interest at the rate of 36 per cent per annum; on a credit of 60 days from a house that allows 10 per cent for cash you are paying interest at the rate of 60 per cent per annum. If you are able to obtain credit at all you must certainly be worth some property and be able to secure a loan at the bank. If you are short of money when bills are due how much *cheaper* it would be for you to secure a loan from the bank at 6, 8 or even 10 per cent per annum, and pay your bills after having deducted the

DOUBLE LILIUM AURATUM.

discount for cash, saving from 20 to 50 per cent per annum in interest. Perhaps you hadn't thought of it in this light before.

But, you say: "I don't always pay these bills when the usual credit has expired. I let them run three or four months, sometimes longer, and so I wouldn't save so much interest by going to the bank." Ah! But is that honorable? If a bill is due November 1 according to the terms of sale and you permit it to run till March 1, you are withholding from some one money that belongs to them, not to you. You have practically dishonored a note when due. In addition to this how about your future credit with that house? Will they be as anxious for your orders as they would if you paid promptly? Will they make you *as close figures* as they would if they felt assured that payment would follow promptly when due? There can be but one answer to both these questions.

Be careful about giving long credits in your own business. Recklessness in regard to these matters has been the ruin of many a business man. The greatest fallacy of all is the policy described in the remark quite frequently made: "If I could get what is due me from that man I would never give him another dollar's credit, but if I stop selling him now I would lose all I have on the books against him." This is the height of folly. When this stage is reached chop it right off short and waste no time in getting in your claim while there is yet hope. Let some other fool carry men of that kind.

Don't let any account run over six months without a settlement. Get a note if you can't get cash.

The wholesale houses who give long credits to irresponsible parties do the whole trade a great injury. It is really surprising after each smash up of one of these brilliant but irresponsible parties to

find how many houses have been cajoled into giving credit for considerable sums, and that to men who have employed similar tactics several times before.

Credit is necessary to the proper transaction of business, but in these days of brisk competition its abuses have grown to wonderful proportions. Conservatism in financial matters has grown to be one of the most essential features of successful business management.

Catalogue Spelling.

Now that we have provided a committee to revise our present jumbled nomenclature, how about some means of securing more correct spelling of the names afterward?

While the compilers of a few catalogues seem to exercise care in this matter, the majority have a large proportion of the names horribly misspelled. Is it lack of knowledge or carelessness and poor proof-reading? Probably in some cases it is the first, in others the latter, and in still others a combination of both. We have seen common names which must have been as familiar as the alphabet so misspelled that as they appeared in the catalogue they resembled more the names of some Russian villages than common plant names.

Any one who has a business of sufficient size to warrant sending out a catalogue should have sufficient pride in it to see that the names are at least correctly spelled, even if the descriptions are rather lurid. In addition the retail buyers of plants use these catalogues as authority on the spelling of the names; give them correct names or none at all. A buyer judges a house very much by its catalogue. A poorly gotten up catalogue full of misspelled words and typographical blunders creates a poor im-

pression at once on a discriminating buyer. Send out a good catalogue if you send any, for a poor one will probably do you more harm than good.

Double Auratum Lily.

Our illustration is from a photograph of the flowers sent us by Mr. E. F. Siegenthaler, Wooster, O., and mentioned in our issue of October 15. In each flower there were two rows of segments looking much as though one perianth had been set inside of the other. A number of the segments were in a state of partial transformation from the stamens, anthers being in several cases to be seen on the tip or edge of the segments.

The beauty of the flower is certainly not enhanced by being "doubled," but should it be possible to perpetuate this freak, catalogue men would probably find it a great card, the single auratum being so well and favorably known and people so anxious for "double" flowers. Should this double auratum be catalogued with the description usually accorded such novelties, we have no doubt the buyers would expect a flower as double as a dahlia.

Our National Emblem.

I am very much pleased with Mr. Battles' article on the "Convention of National flowers," and it has opened up to me some new ideas about what care should be used in adopting our emblem. I regret exceedingly my inability to express my thoughts as beautifully.

Would it be right for us, the grandest nation on the face of the globe, to adopt a flower that is comparatively unknown in other countries than ours? one that all strangers would know only from pictures and not from actual acquaintance. I would say, no! Let it be something which every being in the world is more or less familiar with and one which they have supreme respect for and look upon it with awe for its wonderful strength.

Do not let it be the golden rod, *Nymphaea odorata*, *rudbeckia*, or any like flower. Can we as florists use any other than a botanical name? If not, then in place of golden rod (a merely local name) we must use the name *solidago*. Look in your dictionary and you find the *solidago* is closely allied to the aster family, and that it is comparatively speaking indigenous only to this country. Therefore, foreigners would not know the flower, as it is unknown with them; a sufficient cause to make this flower undesirable.

Shall we adopt the water lily as our emblem? My vote again should be cast in the negative; were we to adopt the *Nymphaea odorata* it would be supposed that we were copying after both Hindoostanee and Egyptian, which have adopted as their emblems *Nymphaea rubra* and the *lotos* respectively. Don't let us add another *nymphaea* (*N. odorata*) to represent a third national emblem. Mr. Battles spoke of the water lily going to sleep; had any of us thought of this fact. We represent ourselves as a nation always alert and ready to grasp any new ideas and improvements. Is the water lily then symbolical of our energy and push?

Of all the flowers and plants that have thus far been presented for selection, I would vote for Mr. Battles' oak. It carries out the idea of our aim as citizens; it is a representative of the noblest,

strongest and grandest vegetable life, the three qualities that we all aim to reach as loyal citizens of this grand country. It starts just as our nation did, from a small beginning, the acorn as compared with a band of Puritans. Then the Oak tree, the "Monarch of the Forest," as compared with the national government of to-day, the monarch among nations.

Some of your readers may oppose the oak from the fact that it is not a flower. Let this have no weight with us, for on looking over a list of national emblems both ancient and modern, how often we find that leaves are used. Among them we can mention the laurel, palm, olive, shamrock and acanthus.

Don't let us put the first stain on that grand flag presented to the national society by adopting an unworthy flower or leaf as our emblem. Very few of us can look around our homes without being reminded of the grandeur, strength and durability of our favorite, the oak.

The question of durability raises another point in favor of the oak. Public men in Europe have said that it was an impossibility for a republic to exist for over a couple of centuries. We refute the idea and the oak would therefore be a fitting emblem in that it is, as a tree, most durable.

Lastly, in the language of flowers, the oak means hospitality; how suitable for a nation that opens its portals wide to the oppressed of all nations to adopt as its emblem such a suitable leaf and fruit. Philadelphia. CHAS. F. EVANS.

Philadelphia.

Our chrysanthemum show takes place the 13th to 16th inst; we are promised great things. Cut flowers of chrysanthemums are selling now from 25 cents to \$2 per dozen; we understand that some New York florists are selling them for as much as \$6 a dozen; Philadelphia has not yet enthused enough to pay such prices, but we are living in hopes. Roses sell at about the same prices as I quoted in my last.

Fern pans for table decoration are more popular than ever; many families have two, one being taken away at the end of the week and the fresh one delivered. In this way the pans are always in good condition and make a cheap and beautiful table ornament.

There is quite a cry against the use of ribbons with flowers; in the main we believe the opposition well founded, but in some cases ribbons are effective. An instance of this came under our notice a few days ago. A prominent club gave a dinner and used 500 yards of ribbon of the club's colors. They had a large ball of laurel sixteen feet in circumference hanging from the ceiling in the center of the room and directly over the center of the table. From the base of the ball they had probably 150 ends of ribbons of the club's colors hanging; tacked on the ends of the table and on the centers of the two sides were ribbons arranged in fan shape. On all candelabra were sashes of ribbons and on the officers chairs were canopies made of laurel wreathing and ribbons. While we are not in favor of this profuse use of ribbons, we cannot help admitting that in such instances it is very effective.

Dried, pressed autumn leaves are effective in dinner decorations at this season. Such leaves do not wither. They are made into sprays which can be festooned over the chandelier and mirrors, then wreaths made of them to place around the mirrors upon which stand the cande-

labra, and upon the center one a fine cut-glass bowl filled with Puritan roses on extra long stems. This arrangement was much admired at one of our best club houses.

Dracena fragrans and *Araucaria excelsa* (Norfolk Island Pine) are very popular for house plants this season.

Two gentlemen were seen the other day with an oak leaf and acorn in their buttonhole. They evidently have heard of its being proposed as our national emblem and are in favor of it.

Grace Wilder carnations will not be as scarce this year as previously. Our growers have more of them planted and one firm has contracted for 2,000 cut flowers of this variety a week with a Bostonian.

A wreath or cluster of flowers has been used in place of crape to mark the houses that have been visited by death. Not a new idea but one that should be encouraged.

Among the growers Messrs. Harris and Colfesh have entered for the grand prize.

We are promised some chrysanthemum flowers 12 inches in diameter. Quite wonderful, don't you think so?

The places of Messrs. Craig, Lonsdale, Burton and Evans are all looking promising for a big winter's business. Their stock generally speaking looks fine and we hope it will exceed their anticipations.

Chas. F. Evans has put up a house especially for orchids and has added four others. Messrs. Craig & Bro. have built a house for azaleas which they have just imported.

Messrs. R. Atkinson & Son, Edgewater Park, N. J., have seven houses and several frames, all of which look well and are extremely neat. They are among the largest growers of chrysanthemums for their flowers, and grow roses and a general stock for spring.

Violets, both single and double, are more plentiful this year than ever before.

We are glad to say that a number of growers have stock of lemon verbena, rose geranium, heliotrope, *Adiantum cuneatum* and *Asparagus plumosus* for cutting purposes, and promise them in quantity during the season.

Several of Philadelphia's prominent growers went to the Orange chrysanthemum show to act as judges.

We are glad to see by Mrs. Benson's article that the New Yorkers are commencing to appreciate the Puritan rose, as we feel that it is a rose that has come to stay. H. H. BATTLES.

Boston.

The Mass. Hort. Society has generously granted the use of its library room to the Gardeners' and Florists' Club for their meetings.

Geo. L. Parker of Dorchester, has made large additions to his rose houses. The steam heating arrangement in these is one of the most perfect systems in the country.

Chrysanthemums are very abundant. There is a noticeable improvement in the quality of those grown this year, as to variety and in size of flower. Many magnificent specimen blooms are to be seen in the store windows, and these bring prices equal to the best selected roses.

Much regret is expressed that so many of the chrysanthemum exhibitions have been set for the same days. The various societies in arranging for these shows would do well to consult one another and arrange as far as possible that their exhibitions should be consecutive, thus giv-

ing exhibitors an opportunity to show at various places and giving those interested an opportunity to visit the different cities.

Roses are very abundant at present. This is due partly to the influence of the chrysanthemums, but mainly to the bright warm weather that has prevailed. One large grower states that at no time during the past year have his American Beauties been so prolific and full of fine blooms as at present. Sunset has now become an established favorite here, even more so than the Perle. W. J. S.

OBITUARY.

HARRY B. MORSE, of the firm of T. Donovan & Co., florists at Natick, Mass., died at his father's home in South Framingham, Mass., October 28. He had been ill for nearly three weeks with typhoid fever, the symptoms from the first being of an alarming nature, but his death was a great surprise to his friends, who for a few days had considered that there was a prospect of his recovery. Mr. Morse was born in Fitchburg, February 13, 1863. At the age of 10 years his parents removed to Framingham. He came to Natick in 1879 and entered the employ of T. Donovan, and in 1880, at the age of 17 years, became an equal partner in the business. He was naturally of a quiet and retiring disposition, but when well acquainted was found to be of a social nature and made firm friends. In his business relations he was always honorable and won the esteem of all with whom he had dealings. At the time of his death he was a member of the Boston Florist Club and the Society of American Florists.

Baltimore Parks.

Probably the grandeur and sublimity of scenery in Druid Hill Park is rarely excelled, and indeed the entire park has been regarded by cosmopolitans as exceeding anything of its kind in natural beauty, as the aim here has been to assist nature in the embellishment of this pleasure ground, rather than to bring it into subjection by the landscape gardener.

At this season the autumnal tints and colorings are exquisite. The dells in this park are truly lovely. The brown leaves of centuries have fallen and carpeted these refreshing retreats which are very suggestive of repose. A fine archway has been formed by removing trees and pruning off branches of others, and from the Mansion House a glimpse through this will reward the observer with a picture, the perspective of which would gladden the eye of any artist, let him be the most exacting.

Two rows of magnificent lindens line either side of the mall and finally encircle the music pavilion, and on Whitsuntide we can almost imagine—and probably the Germans do—"Unter den Linden" of their "Vaterland." A fine lake contains 60 acres of water, the mean depth of which is 40 feet, the water being so pure as to present a steel-blue color. This lake is a part of Baltimore's water supply and is seen on entering the main entrance. A fine forest of oaks is reflected in its placid bosom.

The park abounds in finest forest trees, many of which have withstood the ravages of centuries. Some with twisted trunks and gnarled branches seem to have contended with nature in a grand struggle for supremacy. Several esplanades have been built overlooking a magnificent country and lovely vistas have been formed. The Woodberry

esplanade is the most prominent from which the observer can see the manufacturing town of Woodberry, with its industrial establishments. The chief cotton mills are here planted, also extensive iron foundries. The massive hills behind this busy place seem frowning down on the stir and bustle below and seem ready with little provocation to entirely annihilate the town.

A fine conservatory is being erected in Druid Hill at a cost of \$60,000, the main building of which, with dome 60 feet high, has been completed, and is stocked with a fine collection of plants. The two wings, each 150 feet long and 40 feet wide are yet to be built. The perfect arrangement of this building is unequaled in the heating, ventilation and drainage. In the environs of Baltimore are other parks quite interesting in themselves.

Patterson Park is situated in East Baltimore. From its main plateau one may see that part of the Patapsco river on which the British Man of War was anchored, on which (as prisoner) was Francis Scott Key, the composer of the "Star Spangled Banner," and floating free to the breezes of heaven on the parapets of Fort McHenry, can still be seen those bright stars and broad stripes which so inspired the immortal Key. This park contains a fine conservatory and is noted for its fine bedding.

Riverside Park with its beautiful water front and Federal Hill Park with its lofty elevation and historic associations are quite pretty and attractive.

Baltimore besides is dotted with many beautiful squares. The most prominent of which is Entaw Place, containing at least twelve large plats which are of incalculable benefit to residents of these localities as objects of horticultural interest, and as places of revivification.

WM. D. HAMILTON.

Business Methods.

Do you know what you are worth? Do you know how much you owe? If you can not answer the second question you certainly cannot answer the first one. If you cannot answer both you are not a business man, but merely a poor sort of an imitation. You are like a ship sailing along a dangerous coast in an impenetrable fog. You don't know where you are and have no means of finding out. Can you afford to go on in this way when it is such a simple and easy matter to keep such a record of your business that you can at any time know just how you stand?

Realizing that the great stumbling block in this matter with many florists is, in making the original entries, we have had had printed a quantity of debit and credit tickets—of which we give herewith sample reduced one-half in size—on which original entries can easily be made anywhere—in the greenhouses, out in the field, in the potting shed or anywhere, and with hands dirty or clean. The tickets are put up in blocks of 100; 50 of the debits and 50 of the credits, back to back in each block, the debits in black and the credits in red ink so that they may be readily distinguished. All that is necessary is a block of these tickets and a pencil to make any entry required. You can carry the tickets you have used in your pocket until you reach your office or desk when you can put them on a spindle or hook, where they will furnish data from which any book-keeper can readily work.

Do not use all your effort in keeping track of what is due you. Be just as

careful to make a record of any debts you may yourself contract and make proper credit entry at once. Insist on a bill with all goods delivered, check up the bill at once and if correct credit the amount at once. In using the tickets for this purpose date a credit ticket at I write "By invoice dated \$. . ." Trust nothing to memory. Should a man meet you on the road and pay you some money on account, fill out a credit ticket at once and you are assured against a failure to make proper credit on Lis account when you return home, an error which might give rise to an unpleasant

CREDIT. <i>Jan'y 10 1889</i>		
<i>Richard Roe</i>		
500	4-inch pots	5-

		10-

controversy, at the termination of which you would have to "eat crow" when he produced his receipt for the amount. By being careful to make credit entries at once on receipt of goods you are protected against disagreeable disputes as to items in statements when presented. Check up your statements with the credits you have made and if both are correct they should correspond. We know of many cases where bad blood has grown out of, and pleasant business relations been broken through neglect to attend to simple matters of this kind.

We will furnish the printed tickets above described at the following rates: 100, 20 cents; 200, 35 cents; 300, 50 cents; 500, 75 cents; 1000, \$1.40.

SITUATIONS, WANTS, FORSALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—In greenhouse or floral store, by a young man who has had several years' experience. References exchanged. Address E. E. PARSONS, Leavenworth, Kansas.

Latest Floral Styles.

Fashions in flowers become more elegant as the season advances. The demand for novelties is active, especially among those who order heavily. Several of our leading florists are importing designs for all kinds of decoration. Costly fabrics will be used lavishly in choice arrangements. Satin is out of favor, but rich silks and gauzes stamped with silver and gilt will be the most desirable adornments for baskets and table designs, that are richly filled.

Wide sashes of silk, fringed and stamped with gilt in some appropriate motto are laid under center baskets of flowers for breakfast and luncheon ornamentalions. These look very beautifully; if the silk is stamped with silver the basket work is usually silver covered; if the stamping is in gilt the basket work is gilded. Silk tablecloths for expensive dinners are the same color as the American Beauty rose. This flower is prominent in the centerpiece among a bed of ferns and there are lighter shades of pink roses, such as *La France*, *Mermets*, *Madame Cusin* and the other new French roses.

The Bridal Tiara takes the lead as the piece de resistance in handsome wedding arrangements. It is a superb design, but is an expensive piece to make up. All the brides seem to be determined to be married under a wreath this fall. Very simple and pretty embellishments are made with the artist wreath and the ordinary circle of flowers. Some of these are suspended with chains of foliage and are finished with very wide sashes. The Hebrew brides prefer the bell and this will always be in vogue.

Brides are carrying chrysanthemums. The bouquets are made up in the latest style, the center being loose and formed of tasselling flowers of the Japanese type. When the bride carries a bunch of chrysanthemums the bridesmaids' bouquets are made of roses, the loose center being formed of lilv of the valley or jasmine. The latter flower makes an exquisite center to a bouquet. Bouquets for receptions and the theater are formed of richly colored chrysanthemums and are made quite large. A cluster of *Panna* violets is the fashionable street bunch. White violets with a center of orchids is the very choicest hand bunch for full dress occasions.

Men are wearing boutonniere of a large size; *bouvardia* is the fashionable flower for the coat. The bunches are made up half pink and half white. Half of the boutonniere is formed of double *bouvardia* and half of single.

Funeral work is more elaborate this season than ever known before. Wreaths for laying on caskets are made up with great care and beauty of finish, they are entirely without ribbon. Ivy wreaths

have long sprays of small leaved ivy running over the foundation. They are usually finished with large clusters of violets. The fashion of having a casket entirely surrounded by blooming flowers is very popular. The casket is set on a low bier and roses and high colored flowers form a bed that reaches to the top of it, which is entirely massed with bright flowers; the idea is, to be buried in flowers.

FANNIE A. BENSON.

New York.

London Notes.

The flower market at Covent Garden has been well supplied the last week with blooming plants and cut flowers, English grown flowers bringing good prices. Early chrysanthemums have been in good demand, and owing to the early frost have advanced somewhat in price. Bunches of violets are now in and find a ready sale.

As promised in our last we now give a list of the principal cut flowers for sale in the flower market and their wholesale prices in American money.

Chrysanthemums, white	25c to 37c per bunch
Chrysanthemums, specimen flowers 50c to 75c per doz. blooms.	
Eucharis	\$1.25 to \$1.50 per doz. blooms
Stephanotis	\$1.50 to \$2.00 " "
Gardenias	50c to \$1.25 " "
Tuberose25c " "
White roses	50c to \$1 " "
Yellow roses	50c to \$1 " "
Pink roses	\$1 to \$1.50 " "
Buff roses	37c to 75c " "
Paper White Narcissus 75c a dozen spikes.	
Azaleas 37c to 37c a dozen sprays.	
Lapageria 50c a dozen sprays.	

The above prices are for first class goods as supplied to the best class of London florists. Imported flowers from France are much cheaper and are used by the street sellers principally. In speaking of street sellers we must make an exception of some half dozen men and women who sell flowers near the Stock Exchange. These sell button holes principally and sell fine flowers and get good prices, 12c being charged in many cases for a single carnation with a little green around it.

The annual exhibition of chrysanthemums (blooming plants) was opened at the Temple gardens October 19 and will continue during the month of November. There are some very good specimens on show, but will be in better condition in a week or two, as many of the plants are not in full bloom yet. This show always attracts a good deal of attention. While the show is not large, the plants are well arranged and well grown and many of the choicest specimens can be seen. The plants are arranged very closely on benches in a glass house specially arranged for the show, in one of the most charming parts of the Temple gardens, on the Thames Embankment. No charge for admission is made.

We noticed last week in passing through the West End Parks that the gardeners were busy taking up the plants from the flower beds, to make way for the fall planting of bulbs. The plants were pulled up by the roots and given away to the crowds of men, women and children, that were waiting for them along the walks near by. These would be taken home and transplanted into pots, or cuttings taken, and placed in the windows to grow and bloom all winter. The giving of these plants to the proper classes is a pretty custom, and no prettier sight can be seen in England than the cottage window with its clean white curtains and pots of blooming plants.

The weather the last week has been "quite English." Two days of fog and two clear; the fog was so bad that gas had to be used most all day.

October 19.

FLORAL DESIGNS, A HANDBOOK FOR CUT FLOWER WORKERS AND FLORISTS, is the title of a volume received from the publishers, Messrs. A. Blanc, Philadelphia, and J. Horace McFarland, Harrisburg, Pa. It contains fifty well executed wood engravings of various styles of floral designs elegantly printed on heavy paper with tinted back grounds, and should be of great value to florists, in enabling them to show customers what a design or basket will look like when filled. Many florists keep albums of photographs of filled designs, and this book is designed to be supplemental to such albums or where none are had to fill the vacancy. It will undoubtedly be heartily welcomed by all in the trade and especially by those who are so situated that it is difficult to secure good photographs of their own work. In addition to the plates thirty pages are devoted to practical hints on arrangement of floral work, which will be of interest to beginners.

A New Orchid.

Speaking of the Orange, N. J., chrysanthemum show the Newark daily *Call* says:

A novelty will be the exhibition of the Mrs. Alphens C. Hardy orchid, an entirely new variety imported from Japan by James R. Pitcher. It is believed that he has the only specimens of this wonderful orchid in the world. He has carefully bred and propagated them until he now has in his conservatories at Short Hills, over 5,000 specimens. The flower is an exceedingly quaint and peculiar one, exactly resembling a white ostrich tip. Next May Mr. Pitcher intends putting these wonderful flowers on the market.

Everything of note is an orchid nowadays according to the average reporter. One recently referred to *Authurium Scherzerianum* as "a remarkably large red orchid which grows on trees in South America, the flowers shown being brought from that continent especially for this exhibition."

Ground has been broken for the erection of a large manufacturing plant, the property of S. L. Allen & Co., makers of agricultural implements, on a lot of ground recently purchased by them, bounded by Fifth street, Glenwood avenue, the North Pennsylvania Railroad and the connecting road of the Pennsylvania Railroad.

The plants will comprise four buildings, arranged in the form of a hollow square, with the railroad terminals and boiler and engine house, etc. arranged therein. The buildings will be constructed on the most approved ideas of modern mill construction, being designed with brick enclosed stairways and elevator shafts, with plank floors throughout and large elevated water tanks, all greatly increasing the security from fire.

The main buildings are designed with a view to enlargement by the addition of two more stories in the near future. To enable this to be done without disturbing the operations of the plant, what will constitute the third floor is already provided for, and a temporary roof will be laid over it. A site on the Fifth street front of the lot has been left for the addition of a foundry building to the plant at some future time.

The foundations for the plant are already under contract and will be completed during the present year, and the entire operation pushed to completion as soon as the weather opens in 1889, as the firm expect to occupy it by June 1 of that year.—*Philadelphia Ledger*.

CHICAGO.—Geo. S. Haskell, A. B. Cleveland and Albert McCullough were in the city October 31; also a day or two later William Meggat, C. W. Moore, Dan'l DeCou and Henry a Salzer.

CINCINNATI.—J. Chas. McCullough formerly of J. M. McCullough's Sons, has opened in the grass seed business at 21 and 23 West Canal streets.

News Notes.

HUDSON, N. Y.—R. W. Allen has succeeded Brockbank & Allen.

BUFFALO.—Wm. Legg has removed from Bryant street to 1015 Ellicott street.

ELMWOOD, CONN.—Swenson Bros. have succeeded Chas. K. Swenson, florist here.

LITTLE ROCK, ARK.—Smeeton, Coleman & Co. have opened a down-town floral store.

OAKLAND, CAL.—James Hutchison is completing two new houses 100 x 18 each at his branch nursery at Piedmont.

WASHINGTON, D. C.—N. Studer has opened an office and store at 717 Fifteenth street N. W. with telephone connections.

TOPEKA, KANS.—D. A. Rice has opened a floral store at 819 Kansas Ave. James Hayes has built a new carnation house 75 x 12.

ALLEGHENY CITY, PA.—The chrysanthemums are making a grand display in the city park conservatories, and crowds of people visit the park daily to view the display.

MEADVILLE, PA.—August Krueger has just finished six new houses—three 18 x 60 and three 11 x 60. Sash bars are all cypress, glass is 10 x 12 double thick and benches are of slate.

SPRINGFIELD, ILL.—Florist H. L. Phelps gave his third annual chrysanthemum show at his greenhouses the 7th to 10th insts., and made a very creditable display which attracted many visitors.

NASHVILLE, TENN.—A chrysanthemum show was held the week beginning November 5, the proceeds going to the Hospital of the Good Shepherd. A very creditable display of plants and flowers of autumn's queen was made.

SACRAMENTO, CAL.—The Bell Conservatories have been sold by their former owner, Mrs. E. B. Crocker, to M. J. Dillman, who has for the last four years been manager for her. The glass houses cover an area of 22,000 square feet.

RACINE, WIS.—Julius Martens, the 12th street florist, has sold his greenhouse business to F. Fountaine, the North Side florist, who will run it in connection with his old stand. Mr. Martens has taken a position with Currie Bros., Milwaukee.

NYACK, N. Y.—Mr. John Foley, late foreman for A. C. Tucker, is preparing to commence business for himself. W. R. Davison has built two eighty foot houses for carnations. J. Winterbottom has built and planted two houses, one hundred and fifty feet each, violets and carnations.

LOUISVILLE, KY.—Trade for October was immense. The demand for roses was remarkable, owing to the numerous weddings that occurred during the month. Florists have been working day and night. Plant decorations are in great demand for weddings. November has opened well and promises to be as lively as October.

COUNCIL BLUFFS, IA.—At the trades display held on the occasion of the opening of the Council Bluffs and Omaha Bridge, florist L. A. Casper had one of the most beautiful displays in line. His large delivery wagon drawn by four horses, was surmounted by three huge horns of plenty made of Cape flowers, and filled with dried flowers and grasses; two large horseshoes of dried flowers were placed in front. Inside the wagon each of the fourteen glass panels were draped with smilax looped with a cluster of roses, a large vase filled with choice roses, and ferns arranged loosely in the center. The outside was also festooned with roses and smilax, the whole having a most pleasing effect.

KANSAS CITY, MO.—Fire in the store of C. E. Hampton, florist on Ninth street, caused a loss of \$1,000 October 28; partially insured. Fred J. Faschman, wire worker, in same building, lost \$500. R. Jarrett has left for Maidstone, Kent, England, where he intends to grow roses. His son, Nelson Jarrett, succeeds him here and has built three houses 75 x 28, 75 x 18 and 75 x 10 respectively. Probst Bros.' new store in the Coates building is 50 x 24 with double flint glass windows and handsomely furnished. Newell & Gregorius have opened a floral store at 421 East 12th street. The florists of the city had a meeting the night of October 31, the object being to regulate prices in future and talk on subjects of interest.

MINNEAPOLIS.—At a meeting of local florists held Oct. 29, the Minneapolis Florists' Club was organized with officers as follows: W. A. Smith, president; Richard Wessling, vice-president; E. Nagel, secretary and treasurer. A committee was appointed to arrange a scale of prices for cut flowers, bouquets, baskets

and designs. Trade in cut flowers and plants has been good for past few weeks and is still improving. Chrysanthemums are now in their glory and people seem to take advantage of the abundance of these flowers, as there is an unusual number of receptions and weddings in the decorations at which the chrysanthemum plays an important part. Aug. S. Swanson was married to Selma J. Sudor Oct. 20.

THE HORTICULTURAL TIMES AND COVENT GARDEN GAZETTE.

THE BEST POPULAR GARDENING
PAPER IN ENGLAND.

ANNUAL SUBSCRIPTION \$1.75, POST-FREE.

ADDRESS, PUBLISHER:

127 Strand,
LONDON, ENGLAND

THE AMERICAN GARDEN.

10 cts. \$2.00

PRICE TO BE RAISED JAN. 1st.

The largest, handsomest, most valuable gardening magazine in all the world is *The American Garden of New York*. Its writers are practical, successful gardeners, fruit growers, florists, investigators and amateurs, whose experience covers all states and countries; thus it is adapted to the needs of all sections and conditions. It is thoroughly independent, not being connected with any nursery or seedsman's interest. It is firmly established, covering 42 years of age, dating back to the old *Horticulturist* of Downing, and the *Gardener's Monthly* of Meehan. It is practical, beautiful and finely illustrated. It is valuable to the florist, fruit grower, market gardener, country gentleman, amateur, to every man and woman who loves growing things.

You come the nearest my ideal of a Horticultural Monthly for popular circulation of any of the makers of such literature.—CHAS. W. GARFIELD, *Sec'y Michigan Horticultural Society*.

Indispensable to horticulturists, gardeners and florists (both practical and amateur).—CYRUS T. FOX, *State Pomologist of Pennsylvania*.

For introduction where unknown the magazine will be sent two months for 10 cents. Subscription price, \$1.00 a year; to be raised on Jan. 1st to \$2.00. Previous to that date subscriptions received at present low rate (\$1.00 a year), for one year or several years. Two months now for 10 cents, for introduction.

With AMERICAN FLORIST, one year, \$1.75, if sent before Jan. 1st, WITH ANY BOOKS AND PERIODICALS AT REDUCED PRICES. Address, stating your wants,

E. H. LIBBY, Publisher,

751 BROADWAY, N. Y.

CHICAGO.

Daily Record of Work Done at the Lincoln Park Greenhouses, Chicago, 1887.

Nov. 16—Tem. morning 44°, noon 54°, evening 46°. Wind SW. to NW. Continued propagating *Alternanthera aurea* nana. Potted rooted *echeveria* offsets in thumb pots.

17—Tem. 30, 42, 35. NW. Same as yesterday and pricked in boxes rooted *echeveria* offsets and covered *clematis* with leaves.

18—Tem. 31, 47, 45. SW. Same as yesterday and propagated *Begonias* *Saundersonii* and *Weltoniensis*. Also cleaned cyclamens and moved to warmer place.

19—Tem. 42, 27, 27. SW. to NW. Propagated *matricarias* and *Santolina tomentosa*. Commenced repotting *primulas* into 4-inch pots. Covered out door beds of standard roses with leaves.

20—Tem. 18, 26, 18. NW. Sunday.

21—Tem. 25, 33, 34. S. to SW. Finished repotting *primulas*. Repotted *cinerarias*, some into 4 inch and some into 3-inch pots. Commenced repotting *coleus* into 3-inch pots.

22—Tem. 32, 41, 40. S. Continued repotting *coleus* into 3-inch pots. Took Roman *hyacinths* from frames into houses. Covered with leaves prepared pansy frame and standard rose beds and covered the whole with shutters.

23—Tem. 40, 41, 40. NE. Same as yesterday. *Chrysanthemums* about done blooming.

24—Tem. 37, 40, 40. NE. to N. Thanksgiving day.

25—Tem. 38, 42, 40. N. to SE. Continued repotting *coleus* into 3-inch pots. Potted rooted cuttings of *Alternanthera amœna* and *A. latifolia*. Removed dried *gloxinia* bulbs from pots.

26—Tem. 42, 43, 42. S. to N. Finished repotting *coleus*. Potted rooted cuttings of *Alternanthera amœna* and *A. aurea* nana. Removed dried *gloxinia* bulbs and roots of tuberous *begonias* from pots and packed them in moss in boxes.

27—Tem. 27, 19, 11. NW. Sunday.

28—Tem. 2, 13, 10. NW. to WSW. Covered tulip beds with manure. Potted rooted cuttings of *Alternanthera aurea*. Banked early frames in frame yard with manure.

29—Tem. 20, 27, 24. SW. to SE. Carted potting soil into houses. Sowed fern spores in pans. Potted rooted cuttings of *Alternanthera aurea* nana.

30—Tem. 34, 36, 34. ENE. to SE. Same as yesterday and cleaned and arranged *geraniums* in No. 7.

GARDEN AND FOREST

An Illustrated Weekly Journal of
HORTICULTURE, LANDSCAPE ART AND FORESTRY.

Edited by Professor C. S. SARGENT, of Harvard.

Every progressive florist should read this new journal. Its pages contain from week to week articles on flowers, their cultivation and the most artistic methods of using them for purposes of decoration. Subjects bearing on the work of florists and the influence of their work upon the public taste, receive special mention. The paper is read regularly by many of the most intelligent florists in the country, who find in it information (especially about new flowers and plants) and suggestions not to be found in any other publication. Now is the time to subscribe.

\$4 00 a year. Club Rate, 5 Subscriptions for \$16.00.

GARDEN AND FOREST, Tribune Building, N. Y.

If you wish to make a Christmas present to your friend, send him GARDEN and FOREST for a year. Every week will increase his appreciation of the gift.

HUGHES' SOLUBLE FIR TREE OIL.

FLORISTS AND NURSERYMEN SHOULD
NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectually all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants: such as ferns, etc. If used as directed. Used as a WASH it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

Dog fanciers should not be without it! It makes a silky coat and produces healthy skin action; kills fleas, and is excellent for washing dogs.

Housewives should not be without it! Used with ordinary household soap it is an effectual DISINFECTANT, BLEACHER and CLEANER OF FABRICS. It kills insect life on man, animal, or plant, without injury to the skin, wherever parasites may appear.

Put up in 1 gallon tins, \$3.25 } Full directions & trade
Put up in 1 quart tins, \$1.00 } mark on each package.

THE HELP FOR CUT FLOWER WORKERS AND FLORISTS,
FLORAL DESIGNS,

PUBLISHED BY A. BLANC AND J. HORACE MCFARLAND,

Has been kindly received, although out but a few weeks. It hits a weak spot, and helps those who sell floral work in many ways. 162 royal octavo pages, including 50 plates of designs, printed in soft tints and rich tones, and a complete treatise on floral work. Send for it, or send for a prospectus if you want to know more about it first. The extracts below show how it has impressed subscribers:

"Cheap at \$5 per copy; to florists in small towns must be very valuable." H. H. HUNTRESS, N. H.
"A book that no local florist ought to be without." * * * Will save me time in selling set pieces." J. FULLER, Mass.

"Well pleased; * * * admire plain English hints upon design work." HUNTS, Pa.
"I find it most satisfactory to show my customers to select from. It is the proper thing in the proper place." J. G. EISELE, Phila.

"Highly creditable to the floral art." J. BREITMEYER & SONS, Detroit.
"For the florist doing a retail cut flower business is almost indispensable, since it illustrates that which cannot well be described. It will help to improve the taste, and give the average florist a source for ideas." E. A. SEIDENWITZ, Maryland.

PRICE, substantially bound in cloth, \$3.50, on receipt of which it will be mailed promptly by

J. HORACE MCFARLAND, Harrisburg, Pa.

FOR SALE CYCAS REVOLUTA, well established trunks from three to fifty years old.

WANTED Extra choice Norway Spruce Christmas Trees, seven to fifteen feet.

D. LEE & SON,
MADISON, Lake Co., OHIO.

Professional Nerve.

There is a certain enterprising scheme employed by more than one florist in New York to catch orders for flowers at funerals, which strikes me as not only being heartless and cruel, but a downright insult as well. Several weeks ago the wife of an acquaintance of mine died, and her death was published in the newspapers. The next day an envelope was received at the house, addressed to the husband of the deceased, and when opened was found to contain a printed circular from a local florist. As it is not before me as I write, I am unable to give it word for word, but as well as I can remember it read somewhat like this:

"DEAR SIR:—We sympathize with you deeply for the loss of one so near and dear; but life is but an uncertain thing at best, and death is but the beginning of a peaceful and everlasting life. Our specialty is floral devices and emblems for funeral decoration, and our sets combine modesty and taste as well as cheapness. We execute orders at the shortest possible notice and with the greatest care and exactitude, and we should be happy to call upon you with samples.

Respectfully,
"Established 18—."
Enterprise is well enough in its way, but, carried to this extreme, something should be done to put a stop to it—*New York Daily*.

"15 YEARS' EXPERIENCE. THE GURNEY SAVES 33% PER CENT IN FUEL."

Letter from Thomas Gray, of Fitchburg, Mass.,

In reference to

GURNEY HOT-WATER HEATER.

FITCHBURG, MASS., April 13, 1888.
Dear Sir:—In answer to yours, asking my opinion of the Gurney Hot Water Heater which you sold me, would say that I have had fifteen years' experience in heating hot houses by water, and must say the Gurney Heater purchased of you has proved itself a wonder, both in power and economy, using one-third less fuel to get same results than any heater I have ever used. The brick-lined pot I consider a special feature, as it renders combustion equal throughout the entire pot.

Yours truly,

THOMAS GRAY, Florist.

(Trade Mark)

Hot-
Water
Heater.

THE MOST POWERFUL HOT-WATER BOILER EVER CONSTRUCTED.

These Heaters contain more features for saving fuel and labor, and are better adapted for heating Conservatories, Greenhouses, Dwellings, Offices, Schools and Public Buildings than any other makes of Hot-Water Heaters. By reason of their enormous heating capacity and increased square feet of boiler surface, and positive circulation, they are the only rapid circulating Hot-Water Heaters made. (At a test made the 19th of January, 1888, at the works of the A. A. Grifing Iron Co., Jersey City, N. J., (manufacturers of the "BUNDY Radiators")—where all the leading makes of Hot-Water Heaters have been tested—more power was developed, with less fuel, than any heater ever tested there.)

PORTLAND, OREGON.—The Oregon State Horticultural Society held its quarterly meeting in this city Oct. 9.

CARNATION PRES. DEGRAW.—This is the best white with me. I have tried all the leading white varieties but with me the Degraw beats them all.

Appleton, Wis. DENNIS MEIDAM.

BULLETIN No. 2 from the Hatch Experiment Station of the Massachusetts Agricultural College, Amherst, Mass., is received. In the space devoted to horticulture appear reports on new and standard varieties of fruit which should be of interest to nurserymen. Henry H. Goodell is director of the station and Samuel T. Maynard, horticulturist.

INSECT LIFE.—The fourth number of this periodical bulletin from the division of entomology of the U. S. dept. of agriculture at Washington appears under date of October, 1888. These bulletins contain the results of the more recent investigations of the department and are undoubtedly of great value, more especially to the agriculturists and the agricultural press.

SOCIETY OF AMERICAN FLORISTS.

JOHN N. MAY, Summit, N. J., president; W. J. PALMER, Buffalo, N. Y., vice-president; WM. J. STEWART, 67 Bromfield St., Boston, Mass., secretary; M. A. HUNT, Terre Haute, Ind., treasurer. The fifth annual meeting at Buffalo, N. Y., August 20, 21, 22, 1889.

Question Box for 1889.

The question box was a very interesting feature at the New York convention of the S. A. F., the answers elicited giving general satisfaction. The executive committee at its meeting in Buffalo next January wishes to arrange a list of questions which will equal or exceed in interest the list answered at the New York meeting and request that any member who wishes any information relating to the trade will forward the query now to W. J. Stewart, secretary, 67 Bromfield street, Boston, Mass., that the committee may refer the same to a competent member who will prepare an answer to be read at the next convention.

The members of the executive committee are required to travel long distances and to leave their business at a very busy season when meeting to arrange the programme and every member should do all in his power to facilitate and shorten their labors. You can assist materially by responding promptly to this call. If there is any subject you want brought up before the next annual convention let the executive committee know it now. You may rest assured that it will receive careful consideration.

The meeting of the committee last January at New York lasted two days and kept the members hard at work each day from 10 a. m. to 10 p. m., and with the increasing work before them the coming session will consume still more time unless business is facilitated by assistance such as is now asked.

J. N. MAY.

Summit, N. J., Nov. 19.

THE CHRYSANTHEMUM CRAZE instead of being on the wane seems to have gained a fresh impetus. The shows in the larger cities all equal and some exceed those of former years while a large number are being held this year in places where the chrysanthemum has heretofore been but little known to the general public.

Chrysanthemum Shows.

Boston.

The annual chrysanthemum exhibition of the Massachusetts Horticultural Society opened in Horticultural Hall on Wednesday, Nov. 14, and continued for three days. Most of the plants were in position the night before, many of the exhibitors working far into the night arranging their displays. So, when at twelve o'clock on Wednesday the public were admitted to the hall they had the very rare experience of finding there an exhibition practically complete and ready for inspection at the opening hour.

Entering the lower hall the first object that met the eye was a grand plant of *Cypripedium insigne* with ninety blooms, which was exhibited by Wm. Martin. It attracted much attention on account of its fine habit, vigorous growth and abundant bloom. This, and a small group of camellia flowers from James Comley, was the only entry of any plant or flower not a chrysanthemum. No roses, no palms, no designs of any kind, and even the ever-present fruit and vegetable tables were quietly left at home and the chrysanthemums were given full swing for the time being.

The method of exhibiting the individual blooms here is much better than that followed in various other cities. Most of the specimen flowers being shown in vases, with stems and foliage present, instead of being spread out flat on a painted board. The introduction of a tall vase here and there, filled with showy blooms also served to break the monotony of the long rows of single blossoms, and added much to the general effect. The display of cut blooms this year was much more extensive, and in quality far ahead of any previous effort here. There were also a large number of seedlings raised by local fanciers and many of them were of a high order of merit.

The plants although not quite equal to some previous displays were, as a rule, well grown, dwarf and stocky in habit, with but few stakes, and very little unnecessary tying. Boston is to be congratulated that the pernicious and utterly repulsive system of tying the individual flowers on a chrysanthemum plant to a big wire frame has obtained so slight a foothold here.

One fault which is generally noticeable here however, is the neglect of disbud-ding. The result is, of course, very showy masses of bloom when seen from a distance, but the individual flowers are small and irregular, and our growers would do well to devote a little more attention to securing larger and more perfect blooms on their specimen plants.

The exhibitors this year were mainly the same who have been prominent in

previous shows. Edwin Fewkes & Son deserve special mention for their display of sixty plants on the stage, which were arranged with artistic effect and constituted one of the leading attractions of the show. The competition for prizes offered for general displays filling twenty-five and fifty bottles was considerable. The bottles however were much too close together and much of the effect in this section was lost through overcrowding.

Speaking of the plant exhibits in detail, the best group came from Jas. Comley who received the premium for "best twelve." One specimen of Golden Dragon in this lot was an unusually fine specimen. E. W. Wood took first prize for 20 plants, P. Malley second, and W. H. Elliott third. E. W. Wood also took first on specimen Japanese, specimen pompon and specimen anemone, while the first for specimen Chinese went to P. Malley. The competition in the various classes of Japanese was considerable, but on Chinese it was very limited. The proportion of pompons shown was quite large, a somewhat singular fact in view of the universal fancy for large flowering kinds. There were no "standards" worth mentioning. The premiums for six small plants each of Japanese and Chinese varieties, the plants being limited to not over four flowers each, brought out some wonderfully good specimens from Mr. Fewkes and Mr. Wood.

Mr. Fewkes' set of six Japanese which took first prize was simply grand. It contained the following varieties: Domination, G. F. Moseman, Mrs. Frank Thompson, Robt. Crawford, Jr., Neesima and Mrs. Langtry. It would be hard to improve on this collection. In this same section were remarkably good specimens of Lord Byron, Christmas Eve and Mrs. Forsythe from E. A. Wood. Among the most noticeable new plants were a seedling from Mrs. Wheeler of very dwarf habit by E. A. Wood, a seedling of deepest orange color grown by Pres. Walcott, and a plant of Wm. H. Lincoln by E. Fewkes & Son, this latter being one of the famous set imported from Japan last year, one of which was the Mrs. Alpheus Hardy.

A singular freak shown by Mrs. E. M. Gill was a plant of St. Patrick, a dark red variety of the incurved Chinese type, where one half of the plant had spotted and bore pale yellow flowers.

The principal exhibitors of cut blooms were E. A. Wood, Edwin Fewkes & Son, C. J. Power, Jos. H. White, Geo. Hollis, Pitcher & Manda, Mrs. J. W. Woodice and L. W. Goodell.

For superior culture and unequalled finish, four tall vases of Cullingfordii, Jardin des Plantes, and Mrs. C. H. Wheeler, grown by C. J. Power of South Framingham, excelled anything else in the hall, and it would be impossible to improve upon them.

Mr. Manda was on hand with cut blooms of the famous Mrs. Alpheus Hardy, and he had no reason to complain of any lack of admiration for it. Mr. Fewkes exhibited the other varieties imported at the same time with Mrs. Hardy and known as the Neesima collection. Their names and colors are as follows: Neesima, brilliant yellow; Lilian B. Bird, pink, very double and of peculiar form; Nippon, bright pink; Wm. H. Lincoln, bright pure yellow; Empress of Japan, white; Mrs. Fottler, pink; Kioto, incurved yellow, best of all; Medas, white with drooping thread-like petals, and Katayma, dark maroon, single. Certificates of merit were awarded to Lilian B. Bird and Kioto. E. A. Wood received a certificate of merit for a seedling from Mrs. Wheeler, richer in color than the parent and very double to the center.

Among a lot of twenty-four seedlings shown by Geo. Hollis were three of special merit, named Mandus, pale rose; Mrs. Harrison, white; and Peerless, pale lemon. A certificate of merit was awarded to the collection. President Walcott staged a large number of seedlings among which the best were F. No. 1, a large, full yellow, and several descendants from the Mrs. Wheeler, partaking in greater or less degree of the peculiarities of that variety. A certificate was awarded to the yellow seedling, and also to a superb white flower said to be a sport from Nil desperandum. The prize for best twelve Japanese blooms was awarded to Jas. Brydon. This exhibit comprized the following varieties: Mrs. Frank Thompson, John Thorpe, Canon Farrar, Mrs. C. H. Wheeler, Robt. Bottomley, Golden Dragon, John Collins, Madame C. Andiguier, Boule d'Or, Thos. Cartledge, G. F. Moseman, and Mrs. R. R. Mason.

Among the most noticeable of the showy Japanese collections the following white varieties may be mentioned: Edna Craig, Domination, Jessica, Moonlight and Christmas Eve. L. W. Goodell staged a collection fifty-two named varieties including many of the best sorts.

The attendance during the three days of the exhibition was very large, in spite of the stormy weather which prevailed during a part of the time. Quite a number of florists from a distance attended and this number would no doubt have been largely increased if it were not that the Philadelphia show was on at the same time. WM. J. STEWART.

New York.

After all we have reason to be pretty well satisfied with our show. If the plants were not all they should be, the cut blooms were so far above the average that they made up for any deficiency, and the courage with which Mr. Thorpe and Mr. Spaulding worked in spite of discouragement and dismal weather, was certainly worthy of every success.

It was really a pretty show; the pleasing light under the canvas made everything appear to the best advantage, and even the poorer plants (and I'm sorry to say a good many of them ought not to have been exhibited) lost their deficiencies when viewed in the mass.

But the cut flowers were certainly the chief attractions. The two rival stars in this class were Mrs. Alpheus Hardy and Mrs. Andrew Carnegie. They can scarcely be called rivals either—they are so totally distinct. The first with its feathery white flowers has become too famous to need another description. The prevailing sentiment here, as at Orange,

was that it was the most unique introduction of recent years, and it received special honors. This flower was unable to compete for the special prize offered by Mrs. Carnegie, a silver cup, since that called for a flower never before exhibited. This prize went back to the land of natural gas, in company with Mr. Hamilton, being awarded for his flower, Mrs. Andrew Carnegie.

Another highly commended seedling was exhibited by John Jones, of Summit, it was called Mrs. Levi P. Morton. A very large Japanese, somewhat flat in form, disclosing the yellow center; color lively magenta pink with a silvery tinge beneath the petals. A showy flower altogether.

Geo. McClure, gardener to J. Crosby Brown, of Summit, exhibited a new seedling called Miss Emmy Brighthurst. A regular flower of the Mrs. Wheeler type, but deeper in color and broader in petal; handsome and distinct.

The finest display of cut blooms was in the amateur section, exhibited by Thos. Tricker, gardener to Judge Benedict, of Farview, Staten Island. These were grown out of doors, with no other protection than canvas, and it was interesting to notice the variation of color under these circumstances. In most cases it was richer and deeper than the color of similar varieties grown under glass. Mr. Tricker's display in the Chinese section was really remarkable for the size and shapeliness of the blooms; this class does not always seem so well grown as the Japanese varieties. This exhibitor received most of the first prizes for cut blooms in the amateur class. Another exhibitor who might have made a good second, left indignant because the judging was delayed—the only discordant element of the show.

For bush and standard plants, Geo. McClure received first in the amateur class; for dwarf plants, Thos. Tricker. Among professionals John Thorpe and T. H. Spaulding took the lead. Mr. Spaulding's collection of cut blooms was large and fine, especially those in sprays, the most attractive manner of displaying them. The same exhibitor received first prizes in all classes for bush and standard plants. Mr. Thorpe received first prize for a handsome display of dwarf plants, and also for vases of cut blooms and specimen flowers. Mr. Spaulding displayed the best specimen plant.

John Finn carried off first prizes for palms and ferns, which added much to the beauty of the grouping, and also for two designs. The first, an original design suitable for a reception, was pyramidal in form, composed of adiantums, kentias and pandanus, crested by a small plant of Anthurium crystallinum; the result was exquisitely simple and graceful. The second design, a table plateau, was of adiantums and kentias, with a few Beauty roses here and there. J. G. Behus exhibited some baskets of good roses; also bouquets. The floral arrangements in chrysanthemums were poor, but then they always are, at an exhibition, at least.

The roses and carnations exhibited were really fine. Mr. Jones' Cornelia Cook, Mr. May's Beauty and Mr. Taylor's Mme. de Watteville were all alike superb. The prize takers were Messrs. Bebus, May, Taylor, Jones and John Henderson, the latter having a large display.

In carnations the premiums were pretty evenly divided between John Thorpe and J. H. Taylor. Mr. Thorpe exhibited a new crimson Orient, which was very rich in color.

The United States Nurseries showed a

few orchids, among them *Oncidium splendendum* in bloom; W. C. Wilson displayed a few plants of the same class.

Mr. Fewkes, of Newton Highlands, Mass., exhibited nine distinct Japanese flowers, being the batch in which Mrs. Alpheus Hardy was discovered. The handsomest among them was Lilian B. Bird, exquisite shrimp pink with tubular petals; next comes Mrs. Fottler, a very full-petaled flower with a tint just like a La France rose. A first class flower for the florists' use, because it is just the color women want. Another good flower in the same lot was Kioto, a very rich yellow.

A. A. Wood, of West Newton, Mass., brought a good anemone, Mrs. T. F. Gaue, which was much admired.

Henry Hales, of Ridgewood, N. J., exhibited a deliciously fragrant chrysanthemum called *Nymphæa*. Its white petals give it a look of a miniature water lily, a resemblance increased by its pronounced water lily fragrance. This originated with an amateur, Mr. E. M. Allen, of Ridgewood.

Dailledonze Bros., of Flatbush, exhibited a vase of specimen blooms arranged with careless grace; among them was a very excellent white Pelican.

Mr. J. H. Taylor showed what he could do with chrysanthemums—some tremendous flowers of *Gloriosum* and *Comte de Germiny*. Fine commercial varieties both.

The duration of the show was prolonged from three days to a week. It is worthy of note that both plants and flowers kept very much better and fresher in this tent than in an ordinary exhibition hall. Even the roses kept their freshness long after the usual time. In conclusion, if the show was not as large as we have a right to expect in New York, it had the merit of fine flowers and attractive arrangement.

Among the visitors Mr. and Mrs. W. J. Stewart, Mr. Fewkes and Mr. Wood represented Boston, while the Philadelphians who were at Orange visited the New York show also.

EMILY LOUISE TAPLIN.

View at the New York Show.

Our illustration shows a central group at the New York chrysanthemum show. The chrysanthemums comprising this group were in 6-inch pots, each plant bearing one immense specimen flower. Around the central pole of the tent were arranged evergreens and palms among which were blooming orchids.

In the left hand corner appears a bloom of chrysanthemum, Mrs. Andrew Carnegie, which was nine inches in diameter, and for which was awarded the vase or cup offered by Mrs. Carnegie for the best seedling never before exhibited. A picture of the vase appears at the right. It was awarded to Mr. Wm. Hamilton, of Allegheny City, Pa.

Philadelphia.

The sixth annual chrysanthemum exhibition was opened November 13, and continued open day and evening until Friday the 16th. It could have profitably been kept open a week longer. This fact should be borne in mind another year.

There were not as many plants at this show as in 1887. The lower hall, it will be remembered had to be called into requisition to accommodate the great number of plants in that year, at which time there were seven competitors for the grand prize of \$250, for 25 best plants.

CHRYSANTHEMUM MRS. ANDREW CARNEGIE.

PRIZE AWARDED FOR BEST SEEDLING

VIEW AT THE NEW YORK SHOW.

When the committee on the revision of schedule met to prepare a list of premiums to be competed for this year they deemed it advisable to offer, as the highest premium, \$100 for the best 12 plants, this, it was said, would open the doors wider for competition, because more growers of chrysanthemums could give the time and space to 12 plants than could accommodate and take care of 25 plants, and it did seem reasonable that such should be the case, but it proved otherwise for only four competitors toed the mark this year. There was no appreciable falling off in the quality of the plants. Although one courageous individual made the assertion that 25 plants as good as those Craig & Bro. took first prize with last year could not be found in the building. The committee of arrangements had more space at its command to display the different collections to the best advantage, and room enough was left for the public to examine them critically.

In point of quality, taking into consideration the number of really valuable acquisitions, among the seedlings and recent importations it was by far the best chrysanthemum show ever held by the Pennsylvania Hort. Society, or, perhaps in this or any other country. It is questionable if in Europe so many fine varieties not yet in commerce were ever gotten together before, at one show.

The most sensational novelty was the beautiful Mrs. Alpheus Hardy. Words of mine are inadequate to convey an idea as to its beauty. The flowers are pure white, medium size, incurved Japanese, the center slightly indented, the disc entirely hidden. On the upper surface of the floret petals is what as first sight appears to be hoar frost or snow, which gives it a chaste, delicate and fluffy appearance. It was exhibited both as

growing plants and as a cut flower. It is evidently a healthy and free grower, and the dozen or so flowers shown were uniformly good. A silver medal was awarded Messrs. Pitcher and Manda, of the United States Nurseries, Short Hills, N. J., who own the stock.

Another noteworthy addition to the long list of chrysanthemums was Mrs. Andrew Carnegie, exhibited by John Thorpe. To say the least it was immense. It also has a distinct character. The floret petals are broad and have more of a tendency to stand out than do those that are usually known as Japanese varieties. It is crimson in color, the lower side of the floret petals somewhat lighter in color than the upper surface, but not sufficiently so as to detract from its effectiveness.

William K. Harris came out strong with a seedling which he declares is the best one he has yet raised, and that is saying a great deal; for W. K. has raised some of the very best sorts in cultivation. He has named it Mrs. Wm. K. Harris. The first one he says that he has heretofore considered worthy of the name. In color it is yellow, a shade or so deeper than the old favorite Grandiflorum—when grown in a cool temperature. It is also larger, as shown by Mr. Harris, than any Grandiflorum ever seen in Philadelphia. In its general make-up it is similar to it, only that the bloom seems fuller and higher. In short there is more of it. It will be eagerly sought after both by exhibitors and those who grow first class chrysanthemum flowers for the cut flower market; Mr. H. Waterer is the fortunate owner of the stock, who bought it last year before it had developed its true character.

Fine cut blooms of new and distinct varieties were exhibited by Edwin Fewkes & Son, Newton Highlands, Mass., which

deserved and received marked attention both by connoisseurs and the public. Mrs. Fottler is a delicate bluish tint, very large. Wm. H. Lincoln a fine yellow, deep in color and broad and somewhat flat in shape. Kioto is a yellow too; similar in shade to Grandiflorum, it also resembles it in size and contour, but the floret petals are broader at the base and tapering to a point. They have a tendency to whorl in a fantastic manner, hugging each other as it were, taking various directions yet preserving a uniformity which commends it to every chrysanthemum lover.

A seedling of last year, E. H. Fittler, was exhibited by the raiser, Thomas Monaghan, gardener to C. H. Trotter, Esq., Chestnut Hill. It is not too much to say that it was one of the most distinct and valuable in the show. It is a seedling from Mrs. Frank Thompson. Mr. Monaghan is positive about this, because one head of seed was all that he sowed that year. Out of the same lot of seed came some varieties which when in flower resembled Mrs. Charles Wheeler, but The Fittler stands alone as one of the most lovely, distinguished and valuable sorts that has yet been introduced. It is more like Mrs. Frank Thompson in form than any other variety, but in color it is a rich, bright yellow more or less streaked with red, giving it a slight bronzy appearance, yet it retains unusual brilliancy. The flower has more substance than its parent and like it, it will be a long time before it is displaced as a show flower or for choice cut blooms. It is not yet in commerce, Craig & Bro. have secured the stock and right of distribution. Lucky Craig's! Another notable variety which the same enterprising firm has bought is one that has been named Mrs. Levi P. Morton. It was awarded the first premium as the best seedling at Orange, N.

J. It was also exhibited at the New York chrysanthemum show, where Mr. A. D. Cowan, the popular seedsman, had the honor of giving it the distinguished name it now bears. In color it is a pleasing shade of pink, the floret petals are wide and long, which radiate with the utmost regularity from the disc. The base of each floret petal is white, which makes a broad and decided ring around the yellow center. The extremities of the floret petals have a slight but graceful inclination to incurve. Many expressions of regret were heard from those who had seen it once and had hoped and expected to see it again. But, as Mr. Thomas Jones, of Short Hills, the raiser, had no really good flowers to send—having only the original seedling plant to cut from—he thought it best to send none at all, if flowers creditable to the variety and himself could not be sent.

Mr. C. H. Trotter had a fine large seedling plant of the Mrs. Charles Wheeler type, only it was darker, having less yellow in its coloring. It was labelled President Harrison, I am told, at 9 o'clock on the morning after election. There is likely to be some confusion on account of that name. The most popular one of the hour possibly and at a time when seedling chrysanthemums are opening every day for a few weeks. This may be something for the committee on nomenclature to look into. In Messrs. Fewkes' collection there was another flower worthy of mention, the Medusa. It is creamy white in color, but its floret petals hung down shred-like; it has a very wilted appearance; this may prove valuable to raisers of seedlings; it is entirely distinct; nothing at all in cultivation heretofore is anything like it. Of course the strictly practical florist could see nothing in it.

Craig & Bro. had a meritorious exhibit, mostly new varieties that were not yet in commerce, or were exhibited for the first time, one of the most conspicuous was Sunnyside. On first opening it shows a pink tint. It becomes pure white when fully expanded; its quilled floret petals stand out straight, the outer row being a trifle longer than the rest, gradually shortening to the center; it is very full, large and has great substance. This is sure to take high rank both as an exhibition variety and for choice cut flowers. L. Canning reminds one, at first glance, of Mrs. George Bullock, being white and a fine flower. The habit of the plant is dwarf and free blooming. Its flowers keep better than the Mrs. Bullock, it has not the sad fault which that variety has of showing the effects of dampness so soon. Mr. John Westcott asserts that it is destined to take the lead as a white flower for market, both as a pot plant and cut flower. Mr. Westcott is conservative, his opinion is based upon observation, he having seen it growing at Craig & Bros.' greenhouses. Mrs. E. W. Clark (Chinese) is a companion plant to the preceding; in color it is rich light purple, a dwarf and sturdy grower. Dr. Stryker (Japanese) is a striking variety, dark pink in color, broad floret petals and has a slight tendency to incurve. Mrs. Isaac C. Price (a silver medal was awarded this variety) is a yellow Japanese, outer floret petals show a bronzy tint. It is a promising variety. Mrs. Irving Clark, a light pink Japanese, large and double. Mrs. M. J. Thomas is a pure white incurved Japanese with broad floret petals, very showy and distinct. It will be much sought after for exhibition purposes also for cut flowers. Mrs. J. N. May (Japanese) is a light soft shade of yellow, broad incurved floret petals. This

would add greatly to any collection as an exhibition variety. A novelty, which divided the honors with the new varieties was a grafted Puritan, on which were worked nineteen distinct kinds. This was grown and contributed by Wm. K. Harris, for which he received a special premium of \$10.

The highest prize was \$100 for the best 12 plants, which was awarded to J. William Colflesh. The collection consisted of Mrs. John Wanamaker, light silvery pink incurved Japanese; Mrs. Charles Wheeler, a finer plant of this well known and favorite sort was never seen in Horticultural Hall before. The same may be said about Mrs. Frank Thompson in the same collection, it was a magnificent specimen; there was more color in the flowers than is usual in this variety. A good plant of Cullingfordii added materially to the general good effect, so also did William Joyce, a comparatively new variety. It is a semi-double, an uncommonly pretty pink in color, very showy. Retta Colflesh is one of Mr. Colflesh's own seedlings, pure white, semi double, very attractive and it is evidently a good grower. Eugene Mizzard, a tassel-like Japanese purple flower. Gloriosum, the well known yellow; Puritan, the delicate bluish; Surprise, a Chinese bronze and yellow, and two other seedlings, the names of which Mr. Colflesh has not yet made public.

Second premium, \$85, (only eight points behind the preceding) was awarded to John Kinnear, gardener to Mrs. Joel J. Bailey, Sunnyside, Darby, Delaware Co., Pa. This collection contained Christmas Eve, Mrs. A. Blanc, sent out by Craig & Bro. last year and was named after the wife of the celebrated horticultural engraver. A well grown plant of Mons. Freeman; some experts in chrysanthemum culture said it was the best plant of the kind they had ever seen grown, as it is a difficult sort to do well. M. Boyer, a delicate bluish. The Bride, the first time exhibited, one of Waterer's last year's importations from Japan. It is pure white and it certainly is one of the best of the color. It is large, the outer row of petal florets have a tendency to act as guards, while a few droop gracefully, the inner ones incurve with equal grace. It makes a striking appearance in any group. Robert Crawford, Jr., is also a telling variety, it is valuable for exhibition purposes; it is semi-double and bluish tinted. Mrs. Isaac C. Price (new) one of Craig's last year's novelties. It is chrome yellow in color, incurved Japanese, distinct and fine. Cullingfordii. Robert Bottomley, still one of the best whites. Puritan, John Collins and Gold, another valuable addition that Waterer sent out last year.

Third premium, \$65, to Gordon Smirl, gardener to Wm. M. Singerley, Esq., of the Record greenhouses, Gwyned, Pa. The most conspicuous plants in this collection were Shakespeare, Gold, Puritan, Robert Crawford, Jr., Temple of Solomon, Boule de Neige, Cullingfordii, Duchess, Lucrece, (new) a beautiful and distinct white, Marvel, white, blotched in the center with light purple, very good, and Wm. M. Singerley. The three last were imported by Waterer in 1886. This was the first time they had been exhibited.

Fourth premium, \$50, went to Wm. K. Harris; his collection contained Mrs. Charles Wheeler, Puritan, Mrs. Frank Thompson, Wm. M. Singerley, Mrs. J. C. Henzey (Harris), new incurved yellow, very pretty, Mrs. W. Bowen, (Harris new, Mrs. Charles Wheeler type, but

somewhat darker in color) Gold, Mrs. Langtry, Belle Paul, Tokio, Snowball, (Harris) new, very appropriately named, being descriptive, but there is already one in commerce named Boule de Neige. Many people would be under the impression that the two varieties were synonymous.

For the best collection of six new varieties not before exhibited, Henry Surman, gardener to E. W. Clark, Esq., Germantown, for a grand lot of immense seedlings—No 5 was particularly fine—first premium \$30; W. K. Harris, 2nd \$25; William Jamison, gardener to R. S. Mason, Germantown, 3rd \$15. Best specimen plant, new variety not before exhibited, 1st \$10 to Henry Surman; 2nd \$8, P. Conlan, gardener to Percival Roberts, Jr., Pencoyd, Pa.; 3rd \$5, W. K. Harris.

In nurserymen and florists' class, 1st \$20, for six, one of a kind, J. W. Colflesh; 2nd \$15, W. K. Harris; 1st \$20, for 6, one of a kind, incurved, J. W. Colflesh; 1st \$20, for 6, one of a kind incurved Japanese, W. K. Harris; specimen plant, white, 1st \$5, W. K. Harris; 2nd \$3, J. W. Colflesh; specimen plant, yellow, 1st \$5, W. K. Harris; 2nd \$3, J. W. Colflesh; specimen plant any other color, 1st \$5, J. W. Colflesh; 2nd \$3, W. K. Harris; six single flowering, six sorts, 1st \$10, W. K. Harris; 2nd \$6, J. W. Colflesh; three specimen plants, 3 different colors, 1st \$15, W. K. Harris; 2nd \$10, J. W. Colflesh; specimen plant on which 19 distinct varieties were grafted, special premium of \$10 to W. K. Harris; seedling Mrs. Isaac C. Price, silver medal to Craig & Bro.; for display of seedlings and others not before exhibited, special, \$10, to same exhibitors; display of standards trained in various fantastic shapes, fans, vases, parasols, etc., special, \$10, to Edward Banyard.

In the amateurs' and gardeners' class Joseph Shaw, gardener at Ravenswood, Germantown, Pa., was awarded 1st premium, \$20, for 6 different varieties; 2nd \$15, P. Conlan; 3rd, John McCleary, gardener to William Weightman, Esq., Germantown, Pa.; collection of 4 different varieties, Gordon Smirl, 1st \$15; 2nd \$10, F. R. Sykes, gardener to Mrs. Harry Ingersoll, Olney, Pa.; 3rd, P. Conlan; Patrick Conlan also received 1st, \$25, for 6 standards, different varieties; 2nd \$20, Wm. Dewar, gardener to Mrs. Charles Wheeler, Bryn Mawr, Pa.; P. Conlan 1st, \$5, for specimen plant white; 2nd \$3, John Kinnear; 3rd, Joseph Shaw; specimen plant yellow, 1st \$5, John Kinnear; specimen plant, any other color, 1st \$5, John Kinnear; 2nd \$3, Thomas Monaghan, gardener to C. H. Trotter, Esq., Chestnut Hill, Pa.; 1st, \$5, for specimen standard, P. Conlan; 2nd \$3, Wm. Dewar; 3rd \$3, John McCleary; 1st for best seedling plant in bloom, Wm. Jamison; 2nd \$3, John McCleary; 3rd, Henry Surman.

Open to all class. The Red Leaf prize, a silver cup, presented by Mrs. Wm. P. Henzey, for the best four yellow varieties was secured by Wm. Dewar. The Sunnyside prize, a silver cup offered by Mrs. Joel J. Bailey for the best four Chinese varieties, was deservedly awarded to John Kinnear. The Pembroke prize, a silver cup, presented by Mrs. Charles Wheeler for the best 4 Japanese varieties was taken by P. Conlan. The Record prize, a silver cup, presented by William M. Singerley, Esq., for 6 naturally grown plants was awarded to Gebhard Huster, gardener for Mrs. Heyl, Darby, Pa. The Blanc prize, \$25, offered by Mr. A. Blanc for the best seedling plant in bloom never before shown, was taken by W. K. Harris

with his superb yellow seedling Mrs. W. K. Harris.

Cut blooms—The Wootton prize, a gold medal, presented by Mrs. Geo. W. Childs for the best 25 cut blooms in 25 varieties, was awarded to William Tricker, gardener to Judge Benedict, Staten Island. The Wilbur prize, a silver cup, presented by E. P. Wilbur, Esq., South Bethlehem, Pa., for the best 100 varieties; cut blooms, 3 of a kind, was awarded to E. P. Wilbur, South Bethlehem, Pa. The Shaffer prize, a silver cup, offered by Miss Elizabeth Shaffer for 25 varieties; cut blooms 3 of a kind was awarded to E. P. Wilbur. Thomas Monaghan, gardener to C. H. Trotter, Esq., was awarded a special of \$10 by the society for a collection of fine cut blooms, which was placed in competition for the last named prize.

In the nurserymen and florists' class for cut flowers Craig & Bro. were awarded second premium, \$10, for a collection of cut sprays in vases, one of a kind; W. K. Harris 1st, \$5, for 12 naturally grown sprays, Craig & Bro. 2nd, \$3, J. W. Colflesh 3rd, \$2; fifty blooms, one of a kind, 1st \$25, John Cullen, Bethlehem, Pa.; 2nd, Craig & Bro., \$20; 12 blooms, one of a kind, 1st \$10, W. K. Harris; 2nd \$6, Craig & Bro.; 3rd \$4, John Cullen.

In amateurs' class, 12 sprays naturally grown, 1st \$5, E. P. Wilbur; 2nd \$3, F. R. Sykes; 3rd \$2, John McCleary; 100 blooms, one of a kind, 1st \$75, E. P. Wilbur; 2nd \$60, William Tricker; 3rd \$50, John Kinnear, and a special, \$10, to John McCleary, fourth being withheld; 25 blooms, one of a kind, 1st \$20, E. P. Wilbur; 2nd \$15, William Tricker; 3rd \$15, John Kinnear; 4th \$5, Joseph Shaw.

Thanksgiving Design, 1st \$25, Hugh Graham's Son; 2nd \$15, Pennock Bros. Plateau of chrysanthemums, 1st \$10, Pennock Bros.; 2nd \$5, Craig & Bro.; 3rd \$3, John Mertz. Window box of chrysanthemums, 1st \$5, Miss Annie Bissett; 2nd, Craig & Bro. A special, \$5, Miss Bissett, for a basket of flowers, and a special, \$3, to Mrs. E. D. Demaris, for a vase of *Cosmos* hybridus. Special mention was granted to John G. Gardner for a fine lot of *Erica Wilmoreana*, growing in 5 and 6-inch pots, some of the sprays were 18 inches long. Any person who has any doubt about the practicability of growing heaths in this country should take a trip to Jobstown, N. J., where Mr. Gardner grows heaths—and everything else he has under his care—well.

In florists' class for cut roses there were only two exhibitors, Pennock Bros. and Wm. N. Crawford. Pennock Bros. took first for 12 each of *Niphetos*, Bennetts, Papa Gontier, Sunset, Mermets, La France. Mr. Crawford took first for *Perle* and *American Beauty*. In the Growers' class Craig & Bro., Coles & Whiteley, C. F. Evans and Clarence Ramsden were competing for supremacy. The result was as follows: Craig & Bro. were awarded first for *Perles*, The Bride, Bennetts, Sunsets, Mermets and *American Beauty*. Coles & Whiteley were first with *Papa Gontier*, *La France* and *Mad. Cusin*. C. F. Evans secured first with *Meteor* in the "any other variety" class, against C. Ramsden with "The Gem," who was awarded second premium. The last named exhibitor took first for *Niphetos*.

The judges on plants were Messrs. Charles Anderson, Flushing, Peter Henderson, Jersey City, John Bell, Hestonville, George Huster, Girard College, and Dr. Reed, Philadelphia. On flowers, W. W. Coles, Lansdowne, Pa., John G. Gardner, Jobstown, N. J., and B. F. Dorrance, Wilkesbarre, Pa. On bouquets,

designs, etc., John Burton, Chestnut Hill, Pa., Bryant Ferguson and W. S. Dilks, both of this city. One omission, which is to be regretted, was that the fine flowers and meritorious novelties exhibited by Messrs. Edwin Fewkes & Son, Newton Highlands, were not recognized in any way. There were at least three deserving of certificates of merit, they were Kioto, W. H. Lincoln and Lilian B. Bird.

John M. Hughes had at least 50 flowers of as many seedlings on exhibition, prominent among them were: Wootton, pure white, a distinct type—after the Chinese, and Mrs. S. M. Gross, a large and beautiful pink Japanese variety.

The decorations were on an elaborate scale, such as had never before been attempted here. It was a revelation to the members and patrons of the society. The Florists' Club of Philadelphia took the matter in charge and appointed Messrs. John Westcott and H. H. Battles to superintend the arrangements, and no two florists are better qualified to conceive and execute so practical and artistic decorations as these were. A liberal quantity of Chinese lanterns and Japanese parasols were judiciously interspersed among the evergreens and autumn boughs, which were grouped along the sides of the hall above the gallery with telling effect. Laurel wreathing was festooned around the balcony, suspended from the chandeliers and gracefully overhanging the Japanese garden on the stage. The coral colored fruit of the burning bush (*Enonymus europæus*) was thickly studded on the branches used in the decorations, which gave them a novel and pretty effect. Palmetto fronds formed the background of large bunches of chrysanthemums in which were arranged, with good effect, autumn leaves. The only bunting used was on the baluster and in front of the stage, and this was in subdued tones in coloring, Nile green and cheese cloth, each color alternating in knots and loops. This was Mr. Geiger's idea of the Floral Exchange, and it was favorably commented upon by those who make these matters a study.

Much of the success of the exhibition is due to the untiring efforts of Mr. David Bearn, chairman of the committee of arrangements, and his able assistant, Mr. John Nisbet, who had charge of classifying the cut flowers. The way in which both plants and flowers were arranged greatly facilitated the work of the judges, and was vastly appreciated by those who composed the committees on awards.

The judging on plants was done by points as recommended by Mr. H. H. Battles.

It is a matter for regret that one of the resident (quack) judges unaided and alone undertook to reverse the decision of the committee, as a whole, after he himself had signed the report. This is reprehensible and should be vigorously opposed on principle, especially when it is known that the original decision was rendered strictly in accordance with the schedule.

LONSDALE.

Indianapolis.

A really excellent show was made including many well grown plants and quite a number of novelties.

The best exhibit was decidedly that of Hill & Co., Richmond, Ind. Their twenty five plants, one of a kind, contained some very well grown plants, most of them new and meritorious kinds. Among them were noted Mrs. Wm. Howell, a pretty shade of red; Mrs. Richard Elliott; Venus; Mon. Boyer; Frank Wilcox, a very attractive flower; Delie;

Mrs. Isaac Price, a handsome yellow; Mrs. M. J. Thomas; Mt. Pleasant and Leopard, a novel flower, well named.

Fred Dorner's exhibit in same class ranked second. The plants were nearly as well grown, but it contained fewer novelties than that of Hill & Co. Among his plants Dr. S. H. Metzger, a single yellow of good form and well flowered is worthy of mention.

In the class for ten standards Hill & Co. were first with ten good plants. Among them were Mrs. Frank Thompson, Pietro Diaz, Marvel, Mrs. Richard Elliott, Mrs. A. Blanc, Lewell, W. W. Coles, Mme. Drexel and Frank Wilcox. A feature of Hill & Co.'s exhibits was that each plant had a plainly printed label which could be easily read twenty feet from the plants.

L. Canning, a large white variety impressed one with its value as a florists' flower. The flowers are large, very freely produced and the blooms seemed to come uniformly perfect.

In addition to Messrs. Dorner's and Hill's exhibits large displays of plants were made by Messrs. Weigand, Keller, Berterman Bros., Rieman and Mrs. Hilker. Messrs. Weigand and Berterman Bros. made displays of palms and decorative plants.

The United States Nurseries, Short Hills, N. J., sent a liberal quantity of excellent cut blooms including the great novelty of the season, Mrs. Alpheus Hardy. This is certainly a beautiful flower, a clear white in color, much incurved and the petals covered with white hairs as described. It is certainly the most novel chrysanthemum in existence and is withal remarkably handsome as well as novel, but its resemblance to a white ostrich tip is not as close as it might be, though possibly it resembles that as much as anything else. Other handsome blooms in their exhibit were Cloth of Gold, a large fine yellow; Hero of Stoke-Newington; Admiration, handsome pink; Mrs. H. Cannell, a superb yellow; Robert Owen and Edwin Molyneux.

Hill & Co.'s exhibit of 24 varieties, one bloom of each contained many choice varieties, among them Mrs. E. W. Clarke, majenta, of large size; Sunnyside, large flesh colored flower; Mrs. Isaac Price, large incurved yellow, petals thready and twisted; Newport, pink, much incurved, fine flower; Minnie Palmer, white; Mrs. John May, yellow, and a number of others, duplicates of varieties which appeared in the plant exhibits, Elk's horn as exhibited in this collection was a bitter disappointment. It required very close examination to detect the "horn," and the flower was very inferior. Either Mr. Hill has had very poor success or Mr. Blanc drew very heavily on his imagination when he executed the engraving which we recently published as a portrait of this novelty. We hope that the trouble lay with Mr. Hill for the picture represented a handsome and novel flower. Mrs. Cleveland is another flower which is certainly flattered by the engraving which appeared in last spring's catalogues.

Mr. M. A. Hunt, Terre Haute, Ind., showed blooms of Lady Matthewson, a globular, cream colored flower which appeared as though it might be valuable to the florist.

A few cut orchids including a spray of Vanda Sanderiana from Siebrecht & Wadley, New York, were an attractive feature. The vanda spray was presented to President-elect Harrison at the conclusion of the exhibition.

The designs consisted principally of

plows, lounges, hats, etc. A fan of white chrysanthemums on which roses and ferns were gracefully laid, was well done. It was the work of Chas. Rieman.

An exhibit of artificial plants and flowers—roses on plants bearing apple leaves, Rex begonias bearing trusses of geranium flowers, etc., excited some criticism and should not again be admitted.

President-elect Harrison and his wife visited the show and seemed much interested in the exhibition.

During the show a banquet was given which was much enjoyed. President Carmody had an extra supply of his own brand of humor which he dispensed liberally to the great amusement of those present. A number of visitors from other cities, among them Messrs. Michel and Koenig, of St. Louis, Murphy and Hardesty, of Cincinnati, Lane, Reynolds, Anthony and Grant, of Chicago. Mr. John Lane, the Chicago amateur, and Henry Michel, of St. Louis, acted as judges.

Secretary Berterman is a hustler which is an excellent thing, as he and his assistant, Mr. Hartje, seem to fall heir to most of the work.

Following are the awards:

Twenty-five plants one of a kind. 1st Hill & Co.; 2nd Fred Dorner; 3rd H. W. Rieman; 4th J. D. Carmody.

Ten standards: 1st Hill & Co.; 2nd Bertermann Bros.; 3rd John J. Keller.

Ten yellows: 1st Fred Dorner; 2nd H. W. Rieman; 3rd A. Wiegand.

Ten whites: 1st Hill & Co.; 2nd H. Rieman; 3rd Fred Dorner.

Ten pinks: 1st J. J. Keller; 2nd A. Wiegand; 3rd Bertermann Bros.

Five seedlings: 1st Wm. Hack.

Specimen yellow: 1st Wm. Hack; 2nd Mrs. Henry Hilker.

Specimen white: 1st Hill & Co.; 2nd Mrs. Henry Hilker.

Specimen standard: 1st Hill & Co.; 2nd Mrs. Henry Hilker.

Specimen pink: 1st Hill & Co.; 2nd John J. Keller.

Specimen seedling: 1st Hill & Co.

Collection in 4-inch pots, one bloom to a plant. 1st Fred Dorner; 2nd Jens Larsen.

Collection cut sprays: 1st Hill & Co.; 2nd Jens Larsen; 3rd Bertermann Bros.

Twenty-four varieties one bloom of each: 1st Hill & Co.; 2nd Henry W. Rieman.

On cut roses Mr. Jacob Schulz, of Louisville, took all first premiums except that on Niels which was awarded to Mrs. Hilker.

Baltimore.

The chrysanthemum show of the Maryland Hort. Society held here on the 14 and 15 insts., was by long odds the best exhibition of the kind ever given by the society. The large concert hall in the Academy of Music was filled to its utmost capacity, there was a marked improvement over former years in the general arrangement, and altogether the exhibition was exceedingly satisfactory, especially in view of the limited time allowed for preparation. The decoration of the platform—for which a special premium was offered—was arranged by Pentland, and was the most conspicuous object in the hall. Crotons and palms were used for a background, faced with a perfect mass of chrysanthemums and finished off with a fringe of adiantums and other ferns.

John Donn, as usual, had the largest and most varied collection of chrysanthemums. Among so many excellent exhibits it is a delicate matter to discriminate but Mr. Donn's collection contained some unusually fine specimens, H. Waterer, Cullingfordi, Princess Teck, Jennie Y. Murkland, Souv. de Harlem, Mr. T. Norris and many others were never shown here in better form. Mrs. C. H. Wheeler, Mrs. F. Thompson, Mrs. Bullock and Robt. Bottomley, with flowers five to seven inches across were grand and a plant (in 7-inch pot) four feet in diameter was good enough for Boule de

Neige. The cultural skill displayed in this collection was certainly creditable, not only to Mr. Donn himself, but also to his efficient foreman, Mr. Ekas.

Another very fine collection was that of Gen. Geo. S. Brown. The plants were not of the lean and lanky style, they were well furnished from top to bottom, none of them very tall, but all of them extremely symmetrical.

Mr. Henry Bauer exhibited some immortelle work that was the best I have ever seen in Baltimore. The same exhibitor had a floral guitar on plaque of ivy leaves, very well executed.

Mr. E. A. Seidiwitz deservedly carried off the honors for floral designs with a large mirror having a frame of miniature marigolds, at the upper left hand and lower right hand corners roses, chrysanthemums, etc. were exquisitely arranged; it was a very simple design, but in its conception Mr. S. showed that he knew how to secure special attention from the fair sex, for it is quite safe to say that every lady in the hall examined that mirror frequently.

There was a good showing of palms, ferns and other plants, but the chrysanthemums were the chief attraction during the two days of the exhibition. The judges were—on plants: Captain A. C. Pracht and Wm. Fraser; on designs, W. D. Brackebridge, John Donn and Chas. G. Campbell. They performed their duties to the satisfaction of all concerned, especially the victorious exhibitors.

We give below a list of the awards:

Twelve chrysanthemums, large flowered or Chinese—First John Donn; second Chas. Campbell gardener to Gen. George S. Brown. Six chrysanthemums large flowered or Chinese—First John Donn; second E. A. Seidiwitz. Twelve chrysanthemums large flowered or Japanese—First John Donn; second John Cook. Six chrysanthemums large flowered or Japanese—First John Donn; second E. A. Seidiwitz. Six chrysanthemums large flowered or pompons—First John Donn. Specimen plant large flowered or Chinese—First John Donn. Specimen plant large flowered or Japanese—First John Donn. Specimen plant large flowered or pompon—First John Donn. Display of fifty named plants in pots all classes—First John Donn; second Hamilton Easter. Display of twenty-five plants in pots all classes—First John Donn; second Wm. Fowler. For best display in pots without regard to name or classes—First James Pentland. Twelve cut blooms Chinese chrysanthemums—First John Donn; second Wm. Fowler. Twelve cut blooms Japanese chrysanthemums—First John Donn; second John Cook. Twelve cut blooms pompon chrysanthemums—First Wm. Fowler. Display cut blooms distinct varieties chrysanthemums—First John Donn. Group stove and greenhouse plants—First Thomas Maddock, gardener to Messrs. Hoen. Group ornamental and variegated foliage plants—First John Cook; second Thomas Maddock. Group ferns including tree ferns—First John Cook; second Thomas Maddock. Display of cut flowers—Certificate of merit John Cook. Display of plants—Thomas Maddock. Design of cut flowers of merit—First E. A. Seidiwitz; second Miss Mary Patterson. Basket of cut flowers of merit—Henry Bauer certificate of merit. Carnations—Henry Eberhardt certificate of merit.

A. W. M.

Germantown, Philadelphia.

You will remember that I mentioned in the spring that it was proposed at that time to hold a chrysanthemum show in Germantown in November. As I said then, the committee that had it in charge based the premiums on awards amounting to \$250, with \$50 more for expenses, and that the whole amount was obtained by subscription, with no trouble whatsoever. Indeed the committee reported that \$600 could have been obtained almost as easily as what was got. The gentlemen and ladies who subscribed did so because of their desire to see good premiums given to encourage the growth of plants which would be a credit to the place. In this they were not disappointed.

While the plants as a rule were not so massive as they are often to be seen in the large cities, being confined—except in the case of single specimens—to 9-inch pots, they were evidences of good culture. One collection, that of William Beasley, attracted every one's attention on account of the luxuriant foliage on every plant. Three specimens from Michael Sammon, one each of Source d'Or, Duchess and Puritan were over four feet in diameter, well grown and were pronounced by good judges to be superior specimens in every way. Puritan had from 450 to 500 flowers.

The judges were the well known Philadelphians, Thomas Cartledge, Walter W. Coles and J. William Colflesh.

The following is the list of first premiums:

AMATEUR LIST.

Collection of twelve plants—William S. Beasley.

Collection of six—First, William S. Beasley.

Collection of three plants—First, William S. Beasley.

Single Specimen Plants—For red, John McCleary; for white, Michael Sammon; for yellow, John McCleary.

Cut flowers—Joseph Shaw.

FLORISTS.

Collection of twelve plants—Thomas Meehan & Son.

Six plants, six varieties—Woltemate Bros.

Three plants—Thomas Meehan & Son.

Specimen plants, three colors—Woltemate Bros., for red, white and yellow.

Cut blooms—Woltemate Bros.

Collection of seedling chrysanthemums, six plants, open to all—Robert Carey.

Single specimen seedling, open to all—Alex. Lawson.

Design of cut flowers, other than chrysanthemums, open to all—John W. Young.

Design of cut chrysanthemum flowers—Woltemate Bros.

Cut roses—John W. Young.

JOS. MEEHAN.

New Bedford, Mass.

The chrysanthemum show of the Gardeners' and Florists' Club was a fine one, especially in the cut flower classes.

Mr. A. P. Calder, of Boston, acted as judge and made awards as follows.

PLANTS.

For 25 distinct varieties, double, in pots, one plant in each pot and each plant to have a single stem—George Breunann, gardener for L. A. Plummer 1st; William M. Howard 2d. For 12 plants as above—John Driscoll gardener for William J. Rotch, 1st; James Rickerson gardener for Edward D. Mandell, 2d. For 6 Chinese—Dennis Shea gardener for Horatio Hathaway, 1st. For 6 Japanese—William Keith gardener for Walter P. Winsor, Fairhaven, 1st. For 3 Chinese—Patrick Murphy gardener for S. Griffiths Morgan, 1st. For 3 Japanese—William Keith 1st; Patrick Murphy 2d. For 3 pompons—William Keith 1st. For 1 Chinese—William M. Howard 1st. For 1 Japanese—John Driscoll 1st; William Keith 2d. For 1 pompon—George Breunann 1st; John Driscoll 2d. For 1 specimen any variety—John Driscoll 1st; George Breunann 2d. For 1 standard not less than 3 feet high—Dennis Shea 1st; Patrick Murphy 2d. For group arranged for effect—E. S. Haskell 1st; Dennis Shea 2d; John F. Tynan 3d. For 3 seedlings—John F. Tynan 1st; Patrick Murphy 2d. For largest named collection—E. S. Haskell 1st; William M. Howard 2d.

CUT FLOWERS.

For 24 Japanese varieties, 1 flower each—John Driscoll 1st; John W. Riley gardener for E. S. Potter, 2d. For 12 Japanese—Dennis Shea 1st; J. W. Riley 2d. For 6 Japanese—Wm. Keith 1st; E. S. Haskell 2d. For 3 Chinese—E. S. Haskell 1st; George C. Bliss 2d. For 3 Japanese—E. S. Haskell 1st; William Keith 2d. For 1 Chinese flower—E. S. Haskell 1st; Geo. C. Bliss 2d. For 1 Japanese flower—E. S. Haskell 1st. For Basket of Cut Flowers decorated with foliage—John F. Tynan 1st; Geo. C. Bliss 2d. For Vase of Flowers decorated with foliage—E. S. Haskell 1st; Patrick Murphy 2d.

Worcester, Mass.

The Worcester County Horticultural Society held its fifth annual chrysanthemum show at Horticultural Hall, November 15 and 16. The exhibition was very

good but on account of the rain the attendance was not large.

A collection of well grown plants shown by the State Lunatic Hospital, occupied the center of the hall. H. F. A. Lange had a good exhibit of finely flowered plants arranged on terraces in front of the stage. F. H. Wesson, Joseph Brierly and others grouped their specimens along the sides. Some of the best cut blooms shown were: Mrs. C. H. Wheeler, G. F. Moseman, Domination and Mrs. Frank Thompson.

The obnoxious green stake was not as prominent as last year, but a little less green stake and more green foliage would be an improvement. One objectionable feature was the poor light, which did not bring out the more delicate shades, but with the exception of this everything was well arranged, the tables covered with cloth and the floor kept clear of rubbish.

A. H. LANGE.

New Haven, Conn.

The chrysanthemum show was an advance on all previous efforts of the Chrysanthemum Club. It was certainly highly successful. Wm. J. Rowe exhibited a specimen of Volunteer which was eight feet high. Robert Veitch & Sons' exhibit which contained over fifty plants was a fine display, not entered for competition. Many prominent people were in attendance.

The awards were as follows: Six Japanese distinct named varieties—1st, Archibald Veitch; 2nd, John Gallagher, gardener to Mrs. Hillhouse. Six Chinese distinct named varieties—1st, Archibald Veitch. Four pompon distinct named varieties—1st, Archibald Veitch; 2nd, William Colter, gardener to Mrs. Sheffield. Specimen Japanese—1st, Archibald Veitch; 2nd, John Gallagher. Specimen Chinese—1st, Archibald Veitch; 2nd, John Gallagher. Trained standard any class—1st, W. J. Rowe, gardener to Joel Sperry; 2nd, Mrs. Dr. B. S. Lewis. In the fourth class a special award was made to William J. Rowe for a specially large plant.

Springfield, Mass.

The chrysanthemum show was an improvement upon previous ones in spite of the fact that many growers lost plants by the early frosts. The Mieliez Horticultural Company had perhaps the largest display.

Following is the list of awards:

Display of 12 plants of distinct named varieties, Mieliez Horticultural Co. \$10; C. H. Denison \$8; R. H. Smith \$5; six distinct named varieties, Mieliez Horticultural Co. \$5; R. H. Smith \$4; C. H. Denison \$2 50; three distinct named varieties, Mieliez Horticultural Co. \$3; R. H. Smith \$2; C. H. Denison \$1; single plant, Mieliez Horticultural Co. \$3; R. H. Smith \$2; C. H. Denison \$1; standards, R. H. Smith \$5; C. Denison \$3; cut blooms, Mieliez Horticultural Co. \$10; E. H. Howland, Holyoke, \$5; 25 cut blooms, distinct named varieties, Mieliez Horticultural Co. \$5; C. H. Denison \$3; E. H. Howland \$2; 12 cut blooms distinct named varieties, Mieliez Horticultural Co. \$4; J. E. Taylor \$3; R. H. Smith \$2; single blooms, R. H. Smith \$2; Mieliez Horticultural Co. \$1; C. H. Denison 50 cents; carnations, Dexter Snow, Chicopee, \$3; E. H. Howland \$2; N. J. Herrick \$1; single bloom Dexter Snow \$1.

Hartford, Conn.

The annual chrysanthemum show probably eclipsed any former exhibition of the kind held here. Many well grown plants and flowers were shown. The United States Nurseries at Short Hills, N. J., sent some handsome flowers, including two blooms of Mrs. Alpheus Hardy.

The Horticultural Society offered as prizes: For the best collection, first prize \$40, second \$15; for standards and Japanese \$10 and \$5 in each class; for pompons \$3 and \$2; for Atwood prizes \$25 and \$10.

The prizes were awarded as follows: Collection—George W. Atwood 1st; James Smith, gardener for Newton Case, 2nd. Trained standards—George W. Atwood 1st; Robert Patchet, gardener for Rev. Francis Goodwin, 2nd. Japanese named varieties—John O'Neil. Pompons—John O'Neil 1st; G. W. Atwood, 2nd. Atwood gift—Arthur Scrivener 1st; Arthur Jaqueth and boys of Watkinson Farm School 2nd; C. E. Beach 3rd.

THE LAST ROLL CALL.

OSHKOSH, WIS.—The annual chrysanthemum show was much superior to any which has preceded it. In addition to the chrysanthemums there was a display of ferns and other plants from the conservatories of Senator Sawyer, and cut roses, carnations, etc. from John Nelson. Among the exhibitors besides Mr. James Lewis, Senator Sawyer's gardener, were John Nelson, George Reese, Mrs. Charles Kohlmann, Mrs. Haben, A. H. Bartlett and Isaac Miles of Oshkosh, and Frank Whitnall of Milwaukee. Among those present from other points were Messrs. Wm. Currie and C. B. Whitnall of Milwaukee, and J. C. Vaughan of Chicago.

SYRACUSE, N. Y.—The chrysanthemum show at Greyhound hall attracted a large attendance of society people. The prize for the largest and finest exhibit was awarded to Mrs. Theodore Dissell. The finest collection of ten cut blossoms was exhibited by Mrs. J. J. Belden. Mrs. Theodore Dissell exhibited the finest single plant. Peter Kav, the gardener for J. J. Belden, sent for inspection a miniature garden, which attracted much admiration. Edward Wheadon, a florist from Skaneateles, acted as judge. A handsome collection was exhibited by florist Albert Burt, not for competition.

SACRAMENTO, CAL.—The chrysanthemum fair held November 9 was a grand success. Four of the booths were elaborately decorated with chrysanthemums in colors to represent the seasons and the others were each covered with chrys-

anthemum blooms of some special shade. Many handsome designs in the same flowers were seen.

NEWARK, N. J.—A very creditable exhibition of chrysanthemums was made at the First Baptist Church November 13-15. The most attractive display of chrysanthemums was made by Bird Bros. A splendid array of flowers, ferns and plants came from the greenhouses of Mr. William Clark, and numerous other private conservatories contributed.

MACON, GA.—The annual chrysanthemum show opened in the Armory building Nov. 13. D. B. Woodruff exhibited quite a number of new varieties which were very handsome. The chief design was a mantel piece and hearth of chrysanthemums in various hues. It was elegantly made and was much admired.

HARRISBURG, PA.—A private exhibition of chrysanthemums was made by Mr. L. S. Bent at his residence in Steelton, Nov. 9. His collection is a very fine one comprising over 100 varieties. The exhibition was under the supervision of florist Samuel A. Parker.

OMAHA, NEB.—Florist T. N. Parker gave a chrysanthemum show at the exposition hall beginning Nov. 12. About a thousand plants were shown in 250 varieties. Orchids and decorative plants were an additional feature. The attendance was large.

CHARLESTON, S. C.—This city had a very creditable exhibition of chrysanthemums November 20-22.

"The Last Roll Call."

This design was made for the funeral of a police officer who was a member of the G. A. R. The design shows guns crossed on a policeman's shield. The latter is formed of white carnations, and edged with roses and adiantums. There are bunches of roses at the upper corners and callas at the lower ones. The more open spaces are dotted with Eucharis amazonica. The guns are worked out in immortelles. A band of white carnations edged with ferns and smilax contains the inscription "The Last Roll Call" worked in violets. The piece is on a stand of foliage. It was made by Fred. Gordon.

New York.

F. A. B.

The Autumn Show at the Eden Musee, New York.

An autumn show in which chrysanthemums take second place is a decided novelty; needless to say it is a success. We always expect such a result when Siebrecht & Wadley fill the Eden Musee; their two orchid shows were affairs of note, and their first autumn show, opening Nov. 20, falls into line with its predecessors.

At this season it is impossible to hold an orchid show; there are not sufficient varieties in flower, so this was described as an exhibition of decorative plants. The arrangement was different from previous shows and much more effective. As before, the alcoves along the mirrored walls were filled and banked with plants and flowers, but the main floor instead of being filled up with two or three long tables contained twelve circular stands or pedestals, each bearing one fine plant as a center piece, with a mass of plants and flowers about the base. The one exception to this rule was in the

center of the hall, an eccentric mass of gnarled and twisting branches hung with orchids. This arrangement showed everything to the best advantage while allowing space for the visitors.

The show was first opened for invited guests only, many prominent society people being present, as well as professionals, before it was opened to the public.

The first noticeable group on entering was a good plant of *Phœnicophorium sechellarum*, the "Thief Palm," with its broad leaves and spiny stem; at the base a mass of *Cypripedium insigne*. Next was a superb specimen of *Seaforthia elegans*, its pedestal covered with artistically-grouped stove plants. A good plant of *Ananassa sativa* fol. var., richly colored, attracted more attention because it bore a little ripe pine apple. There was *Alocasia Sauderiana* with oddly cut leaves; small marantas and ferns. This was a very beautiful group. Another group, with a fine *Areca lutescens* in the center, had the base covered with *Adiantum Farleyense*; mingled among the ferns were vases of cut roses, fine Beauties, Mermet and Puritan. They are cutting really fine specimens of the last-named rose at Rose Hill; it really seems determined to redeem its character this winter.

A group with *Cycas revoluta* for centerpiece displayed some good chrysanthemums, stag's horn ferns were hung upon the cycas. A big *Caryota urens* had a base of *Adiantum Farleyense*; a few cut flowers were mingled with the ferns—*Odontoglossum crispum*, *Lapageria rosea*, a few oncidiums, cattleyas, etc. making a very pretty effect. Another big seaforthia with a base of stove plants, is a match to the first mentioned; this is probably the finest pair anywhere about New York, being equal in size and perfect in shape, only unfortunately they are getting too big for ordinary use. A plant or two of *Sphærogyne latifolia* contrasted well with the other stove plants. Its rich coloring and bold habit makes this a very ornamental plant in any group. A fine *Aspidistra* was surrounded by orchid plants; *cypripediums*, *spicerianum*, *Lawrenceanum* and *insigne*, cattleyas, *odontoglossums* and *lælias*.

The center pedestal was most unique. It looked like a mass of forked branches, striking out in every conceivable direction; it was full of odd nooks and crannies and had a broad low base covered with ferns, marantas, crotons and other foliage plants. The branches were covered with hanging orchids, here and there a nepenthes. Little baskets of *Sophranitis grandiflora* covered with its vivid scarlet flowers; fine *Phalaenopsis amabilis*; *Miltonia spectabilis*; *Calanthe vestita*; oncidiums, *odontoglossums* and *lælias*. The arrangement was charming, being so free from any suggestion of artificiality. Its irregularity made it the most noticeable arrangement in the room.

At either side the large central mirror was draped with a curtain of smilax, caught back at either side. Masses of chrysanthemum plants were in front of these curtains; on one side Mary Anderson in her white Galatea costume, stood in the midst of these brilliant flowers. A little group of heaths, *Erica hyemalis* and *australis*, filled one niche; pity these plants are not grown more extensively.

There were very good chrysanthemum flowers from Mr. Wm. Barr, Mr. Tricker, gardener to Judge Benedict, and the John Henderson Co. Mr. Barr sent some of his fine seedlings. "Mrs. O. D. Munn" is a large white flower with exactly the same thick soft texture and creamy tint as a Puritan rose. "Mrs. Jessie Barr"

may be described as "Mrs. Alpheus Hardy" without the hairs—a perfect beauty—this, however, is not an American seedling, being an importation from Japan. Sunset, Miss Alice Broome and Mrs. Wm. Barr were other especially fine flowers.

Oncidium ornithorhynchum, *Vanda cærulea* and *suavis*, *Odontoglossum crispum* and other orchids filled one side recess, with a backing of ferns; another alcove contained a good plant of *Livistona horrida* surrounded by crotons, dracenas and ferns. These side groups were really charming. Some of the orchid blooms were from Wm. Mathews, of Utica; others from John Bush, of Tremont. The main exhibition, however, came from Rose Hill Nurseries. A much admired exhibit from John Bush was a very handsome plant of *Ouvirandra fenestralis*, the Madagascar lattice plant. It was beautifully grown, filling a glass globe, also tenanted by a few gold fish; this vessel displayed its form to the best advantage. This exhibit was given a place of honor by itself on a little stand in front of the platform.

The platform, which has been built out beyond the regular music stand, is very originally arranged. Along the edge it is fringed with variegated vinca; at one end a large specimen of *Cyathea dealbata* stands in front of it. At the back is a prim little hedge of *arbor vitæ*, while the platform itself is turned into a miniature Japanese garden. There are masses of carnations and stevia at either end and borders of marigolds with two tall standard chrysanthemums overlooking the whole. A center bed of Roman hyacinths bordered with pansies; an end bed of fine cyclamens and another of various primulas, among them the dainty *obconica*. Neat little gravel walks pass around the beds, and the whole has a look of formality in miniature.

Of course "Mrs. Alpheus Hardy" was winning admiration at this show; it is the first flower people ask for at every exhibition. Nepenthes were hung about wherever they added completeness, and there were some queer *sarracenias*. Big *latanias* outside gave promise of the beauty inside.

It was a fine show—there was no question of that—and doubly admirable at this season. A benefit to the trade too, and every visitor will hope to see it repeated.

EMILY LOUISE TAPLIN.

Cleveland.

Harry Jaynes has moved across the street on Euclid avenue, his window looks very attractive. Our Cleveland stores do look well these days.

The best selling early chrysanthemums as they come into our markets appear to be *Gloriosum* for yellow, *Elaine* for white and *Elise* for pink.

Robert Kegg has taken unto himself a better half. Robert says it's cheaper than having boarders.

One of our florists bewails the loss of an employee and \$200, which mysteriously disappeared at the same time.

Herman Hart has the chrysanthemum craze, but says no new French ones for him. Hart's place always looks so orderly it's a pleasure to go through it. Order and system characterize the whole establishment.

Ed. Paddock is reported to have made some extensive improvements lately out at his place in Newburg.

Mrs. E. G. Campbell had the prettiest and most tasteful turnout in the late Re-

publican Industrial Parade, so say the local papers. On the top of the wagon (which by the way is one of the handsomest wagons for the purpose in the country), was a floral motto, on which was inscribed "We sympathize," on the reverse side "Hurrah!" It attracted considerable attention.

At a recent funeral of a well known actor a new floral design was well brought out. It represented the proscenium of a theater with the curtain down. The richly decorated arch, the arc of footlights, the white stage and the maroon curtains were all reproduced in flowers of appropriate colors. The piece was at least five feet in height and four feet wide, and just in front of the curtain on the floor of the stage were the significant words, "The last act."

Another design I heard of the other day was for a railroad man; it represented a limited coupon ticket. The ticket which was five or six feet in length rested against a column, on which was placed a ticket stamp and behind stood the Angel of Death in the act of stamping in the date of limit. The first coupon bore the inscription, Pan Handle 69-82; the next N. Y. C. & St. L. 82-83; the next N. Y. West Shore & B. 83-87; the next N. Y. C. & H. R. 87-88. At the top were the words, "Limited to October 9th, '88."

Miss Rose Beatrice, only daughter of Florist J. M. Gasser, was married to J. R. Knisely at St. John's Church on the evening of October 30. The interior was very beautifully decorated for this occasion. Conspicuous among the floral features was the conventional bell, which was in this case some five feet in height and perhaps three feet in diameter. It was filled inside and out with white chrysanthemums, suspended on the lower edge like a fringe was a row of Mermet roses, while a large spray or cluster was arranged on the front in relief. Strings of smilax radiated to the point of suspension from the ceiling of the chancel. On either end of the altar were placed blue vases filled with large bunches of white chrysanthemums while a mass of Mermet roses occupied the center behind which rose a silver crucifix. One of the prettiest features was a wicker gate of smilax over the rail of which was carelessly placed a graceful spray of pink roses tied with pink ribbon. White roses and chrysanthemums crested the chancel rail on either side, while large tropical plants harmonized the different floral features of the decoration. Two arches of white chrysanthemums midway up either aisle divided off the portion reserved for invited guests. The bride carried a bouquet of white orchids, lily of the valley and Bride roses. The bridesmaids carried Perle and Mermet roses respectively. The reception which followed was held at the future home of the newly married pair. The house had been thoroughly renovated and almost rebuilt by Mr. Gasser and it and the beautiful furnishings were a present from the father and mother of the bride. The decorations at the house were in keeping with the interior. The mantels were banked with ferns, palms, etc. Large masses of loose roses in vases occupied different points of vantage. The reception stand was hung with straw colored silk upon which were fastened in a careless graceful fashion clusters and sprays of Gontier roses and *Asparagus tenuissimus*, while the mantel adjoining was banked with white chrysanthemums and pink bouvardia. The beautiful stairway of English oak was also heightened by its

smilax decoration. The supper table also contained floral features; a wreath of *Mermet* and *Bride* roses enclosing a cluster of ribbon of the same shade of each, surmounted, or was laid flat on the bride and groom's cake, while a large plateau of roses occupied the center of the table. The smaller tables were adorned with vases filled with other varieties of flowers. The wedding presents were numerous and elegant. C.

Floral Mat.

This is six feet long. Large bunches of *Lilium longiflorum*, lily of the valley compose the corners, while *La France*, *Brides*, *Perles*, *Bennetts*, *Beauties* and *carnations* are massed in between center panels of *American Beauty* roses. There are violets at each end of the panels. The lettering is done in violets, among white carnations. The mat is fringed with *Adiantum cuneatum*. Mrs. Irwin made this for the Depew reception.

New York.

F. A. B.

Long Island Plant Notes.

BY WM. FALCONER.

CACTUS DEVOTION.—Rightly handled there is money in cactuses and satisfaction too. I don't mean that people hanker after building up collections of them as they do of orchids, but amateurs want them. They want *Phyllocactus latifrons*, *Cereus grandiflorus*, *Cereus flagelliformis*, *epiphyllums*, *Echinocactus multiplex*, and some *mammillarias* and "old man" cactuses as window plants. With the exception of the last two all are free and showy bloomers. And they make the best kind of house plants. They will bear an immense amount of ill treatment with apparent impunity provided you don't drown them. In mosaic and other artificial flower garden decorations cactuses of all sorts, large and small, are in demand. A marked case of cactus-fancy was told me by a responsible florist the other day: A butcher who knew nothing at all about plants happened to see a few nice cactuses on exhibition. Their "funny" forms arrested his attention, and he bought a few dollars' worth. He became so interested in them that he bought a good many more. These only whetted his appetite. His house fronted to the north, and now he wishes to sell his house that he may buy a house that faces south so as to give him an opportunity to build a south-facing greenhouse for cactuses. But a south-facing greenhouse is not at all necessary for the good cultivation of cactuses.

THE VARIEGATED-LEAVED COLISEUM IVY (*Linaria cymbalaria*) is another pretty little plant not unlike the ground ivy in general appearance but the variegation is whiter and the foliage smoother. It may also be used in the same way. It is not common around New York. I think it was Peter Henderson who told me how carefully he imported it from Europe a few years ago—brought it over with him on returning from one of his visits there and nursed it in his state-room. But he might not have bothered with it for we then had plenty of it in America. I remember seeing a lot of it, seven years ago, at the Cincinnati Floral Co's. greenhouses.

THE VARIEGATED-LEAVED GROUND IVY (*Nepeta glechoma*).—A good deal of this pretty little plant is now grown around New York, and it has even found its way to our auction rooms. Used for small baskets or brackets it is quite ap-

propriate, and it makes a comely sod, selaginella-fashion on the surface of the ground in pots around fuchsias, rubber plants, palms or other house plants. In moist half-shady places out of doors it is quite hardy, but less so than is the green-leaved form which has become naturalized among the grass by the roadside in the vicinity of old gardens. It is readily multiplied, and is being increased vigorously by some of our florists for the spring trade.

MR. W. J. DAVISON has been engaged to assist Mr. Peter Henderson in the compilation of a new edition of his *Handbook of Plants*. It is generally conceded that Billy Davison is one of the most intelligent horticulturists in America. He has an excellent knowledge of plants, hardy and tender, and is intimately familiar with the seed, florist, and practical plant-growing business in their several ramifications. And Billy loves flowers. When

FLORAL MAT.

I go to New York I most always bring him a bunch of flowers, anything new, rare or old-fashioned that I have got. To see his big heart open up in love for them, and share the joy they bring him, is pleasure that mutual tastes alone appreciate.

COSMOS BIPINNATUS.—What a pity it is that this splendid Mexican annual blooms so late in the fall as to be subject to be destroyed by frost before it comes well into blossom. We can get it into bloom at any time of year by growing it in pots and confining its roots, but when planted out, after vigorous growth begins flowering stops till well into September when it again begins in earnest and continues till destroyed by frost. We have it now Oct. 29 in extreme profusion, for, on account of our proximity to the salt water we have not had any frost. As cut flowers these cosmos blossoms are splendid, large, showy, beautiful, pure white, rose or purple, and they last a long time when cut. Some plants I raised from seed last June although not so wide spread as those raised in March are just as well furnished with flowers. Would it pay florists to grow it in pots for blooming from September till Christmas?

"WHAT DO YOU WANT?" "Manettia bicolor." "Why, haven't you got it?" "Yes, we have a few plants but not nearly enough to get up enough stock for our spring sales. It has been laying around our place for some years but we never did anything with it till last summer when I planted out a few on a bench in a greenhouse and trained them up on stakes and strings, and they grew and flowered beautifully. When customers came through the houses they admired it so much and asked for it that the boss right away saw money in it and is now going to push it." Said a florist's foreman who came to see me the other day. I took him out into the garden to a fence trellis on which I had the manettia growing, and stripped off half a bushel of

viues, packed them into a bundle for him and sent him home happy. Now here are two points to consider: First, The manettia grows better, keeps cleaner, appears handsomer and yields a vast deal more wood for cuttings when planted out of doors in summer than when grown in a greenhouse, no matter under what conditions. Second: The "boss" never appreciated this plant till his customers wanted it, and the customers never wanted the plant till it was presented to them in an attractive form. And it is just the same with a hundred other kinds of plants that we keep kicking around our greenhouses.

ORCHIDS, yes the people do want them. Among my correspondents are a large number of amateurs throughout the country who write to enquire about one thing or another. Many of these particularly wish to know about orchids. They have read about them, heard about them and seen pictures of them, but many of these people have never seen an orchid and are very curious not only to see one but to possess and try to grow one. And we all know there are lots of orchids that can be grown successfully as window plants. Now wouldn't it pay some florist who issues a handsomely illustrated catalogue to offer a \$5 collection of orchids and devote a page or half a page to illustrating and describing them? Three or four plants could be given for this price. And instead of raising this stock himself he could contract with Mathews, Brackenridge, Saul or other orchid grower to furnish the plants.

Cytisus Racemosus.

This old greenhouse shrub has experienced a revival within the last few years and if ever a thing merited to be brought out again and be pushed to the front, *Cytisus racemosus* is surely one of the most deserving, on account of its free flowering habit and the neat and graceful appearance of the whole plant. Whether grown as a standard or in bush form everybody must be pleased with it when in bloom, barely showing the fine, small, but dense foliage of a glaucous green color, so entirely is it covered then, with the golden yellow racemes of flowers.

As we may have them in bloom a month or six weeks before or the same time after Easter, or even later, we have here a valuable decorative plant, which bears the hardship of transportation well and can endure the dry air in dwelling houses as well as any plant I know of. The flowers hold on firm to the stems, are not easily bruised or spoiled and last a very long time. If you have a large plant of it you may expect to see it full of flowers for three months, providing you do not keep it in a very warm house; but there are not a great many large old plants in the country, although plenty of younger plants in pretty good shape are offered in many places, and as they are very free growers we shall have an abundance of good sized specimens of every shape in a short time. For Easter decoration it rivals the azalea, but is much less difficult to handle in transportation and also giving us a color, entirely missing in the latter.

We do not need to give them much heat, nor even the best site in a cold house; they are contented in most any place and don't require a great deal of attention. After flowering (usually after Easter with me) I set them in a shed and trim in the tops and give just enough water to keep life in them. Here they

remain until middle of May when they are repotted and set outdoors for the summer, the pots plunged to the rims and far enough apart to allow plenty of room for the new growth to expand. At the end of September or first of October the younger plants may require a second repotting before they go in the houses, but the older stock in larger pots will not need it. Nothing more is wanted and you may give them a warmer or a cooler place according to the time you want them to flower. Plants just kept free from frost in a pit or cold house will force like any of the hardy shrubs in about six to eight weeks without any difficulty.

Their propagation is an easy matter. Cuttings put in during winter or spring will root like willows, with or without bottom heat, and if potted off in rich sandy loam will make good salable little plants in one year. But the better way is to turn them out in the open ground for the first year, pinching in as they grow, and if dry weather sets in give them an occasional watering to help them along and by fall they will be nice bushy plants. Should you want some standards with straight stems and nice heads select the strongest of the lot and as they grow trim off all side branches until you have the required height, then let the remaining eyes at the top come out to form a head and treat these heads the same as you would a short bushy plant. Heads ten to twelve inches in diameter are no unfrequent occurrence for one year olds if the plants received good care. In lifting we should try to get up all the roots, even if the ball is unproportionately large; instead of cutting off any roots I prefer to wash them out in order to reduce the ball and be able to get the plants into a given sized pot. Cutting in the roots will cause many plants to shed their foliage and this would seriously interfere with the sale of them afterwards.

As I have had several inquiries lately relative to the management of this cythus I may as well give the answer in these columns as by letter. Although many readers may be perfectly familiar with the culture and treatment, others may not know much about it and these few hints will possibly help to advance a long neglected plant, also in other sections of the country. In the larger cities of the east it has had a good run for the last few years and will, by all appearances, stay permanently.

Rochester, N. Y. JOHN B. KELLER.

Rose Forcing in England.

I arrived in England March 15 last and found that with one of the largest growers of cut roses in England, growing for the Covent Garden market trade, roses were a scarce article. About twenty houses were devoted to roses some over 250 feet in length and their cut then averaged seven or eight dozen buds a day. The cause of this small cut was simply lack of heat, the temperature rarely rising above 50° in the day time and at night it must have been considerably less. I remarked to the foreman that an American florist would be for putting legs on the pots so the plants could walk up and down to keep warm.

The result of this treatment is that during the winter when flowers bring good prices but few are produced while in spring when the sun heats up the houses enormous crops are cut and sold at ridiculously low prices. After this crop is cut they are nearly as scarce as in winter. I visited Covent Garden market July 15

and on that day I believe it would have been impossible to buy 200 *Perle des Jardins* buds, and I doubt if a thousand blooms could have been scared up in all England. I believe there is a fine opening there for some of our American rose-growers as good prices are realized except in spring.

They graft nearly all their roses on the *Manetti* stock and use most any kind of soil, the deficiency being made up by guano or artificial fertilizers. A number of growers to whom I explained the American system seemed to understand its advantages but found it very difficult to acknowledge that their American cousins could teach them anything.

FRED MOORE.

Cattleya Bowringiana.

This is one of the tall growing varieties attaining a height of about a foot and a half. It is a very striking plant, and is a free bloomer. I think it will be found quite an acquisition to florists when better known. The pseudo-bulbs are erect, supporting two or three stiff smooth glaucous green leaves and are covered by three or four loose glaucous sheaths when young, they are much swollen (cormoid) at the base from which the roots are freely produced. The flower spikes issue from the tops of the pseudo-bulbs bearing from five to a dozen or more flowers measuring two and one half inches across, sepals and petals broad, deep rose color, lip somewhat cupped, bright crimson with a rich dark stain at the base extending along over the column, which is partially exposed and pure white, throat white, prettily penciled inside and rose outside. It is a late fall bloomer and lasts a long time in good condition.

The plant does best in a pot three parts filled with potsherds in a mixture of roughly chopped fibrous peat and sphagnum, care being taken to press the compost firmly in around the roots. A day temperature of 75° and 65° at night suits it best.

R. M. GREY.

Pittsburg, Pa.

CHRYSANTHEMUM NYMPHÆA.—H. W. Hales, Ridgewood, N. J. sends us flowers of his new sweet scented *chrysanthemum Nymphæa*. The blooms are shaped something like a water lily, rather small in size and fragrant. The fragrance however savors more strongly of the *chrysanthemum* than of the water lily, though more attractive than that the first named flower usually favors us with. Mr. Hales states that the plants are dwarf and very free flowering, the individual flowers being borne on long stems making them desirable for cut flowers.

CARNATIONS.—Mr. Theo. Bock, Hamilton, O., sends us specimen blooms of carnations of standard new sorts, showing evidence of good culture.

GARDEN AND FOREST and the **AMERICAN FLORIST** one year to one address for \$4.75.

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

III.

Softly, softly, young man, you'll burst that rubber hose in a minute unless you work that force pump more gently. That's it, come to a rest and let me hear what the matter is. Old Scrubbs is a rascal, is he? Possibly, but give us the facts. You say you were in your nursery the other day filling an order for six dozen fruit trees when Old Scrubbs' son presented a bill for compost amounting to \$1.75, you paid it, he receipted it with a pencil, went off and spent the money for liquor and now the old man says it was no payment because the bill was not receipted in ink. Pretty mean business this; but take it coolly. The receipt is perfectly good. But let me say to you right here, that in general the law looks upon signatures and memoranda written in pencil with some suspicion. Therefore, unless absolutely impossible, make use of ink in all books and papers relating to your business. It doesn't look well to see a bill written in ink with the receipt in pencil. But I am glad you called my attention to the subject for if you have no objection, I'll talk to you about the execution of instruments, documents, contracts, etc.

If you sell a firm a bill of cut flowers you may think your work is done and that you have only to go to their place of business and collect the bill on the first of the month. A great mistake. You or some one for you must make out the bill properly and send it with the goods. Now suppose this firm is composed of Rough & Bluff. Through some carelessness the bill is made out to Mr. Rough personally. That very week the firm fails. Rough hasn't a cent in the world; Bluff is the moneyed man. Here you find yourself with a *personal* claim instead of a *firm* one; for make sure that Bluff will claim that the cut flowers were sold to his partner personally and not to the firm and the bill rendered will prove it.

Again, suppose it so happens that you are called upon to accept some document under seal from a firm, say a lease, a general release bill of sale or bond. Now it might occur to you that if one of the firm should sign the firm-name to the instrument, it would be all that the law required. Not so. See to it that each partner signs his name and that the fact that they are partners constituting such and such a firm is set forth in the body of the instrument. Bear in mind that in all these matters an ounce of prevention is worth a hundred weight of cure!

If you have dealings with a married woman take care that she doesn't sign as a great many of them do: Mrs. Doe, instead of Susan B. Doe. It is matter of proof to show that she is the wife of John Doe. Now suppose you hold a power of attorney from some friend to sell or lease a greenhouse property. When it comes to signing, *first* write out the name of the giver of the power, *then* your own, preceded by the word "By" and followed by the words: "Attorney in fact."

If you should be called upon to execute any instrument as executor, administrator, guardian, etc., never fail to add the descriptive word to your name. This gives notice to the world that you are executing in a representative and not in a personal capacity.

There is a vicious custom among business men to hold themselves out to the world as having partners, when in reality

they have none, and to use the sign "Co" when there is no "Company," or to call themselves a corporation when there is no legal incorporation. My advice is in all these matters not to try to count for more than you really are. Nothing hurts a business man so much as to be obliged to go into court and confess that his partner is a myth. It prejudices a jury against a business man at once.

Right here let me call your attention to something before I forget it. Be particular in paying the wages of your helpers of all kinds and no matter how small the account, insist upon a receipt. If you make these payments every week keep a regular pay roll. Suppose they can't write? Then let them make a cross and have a witness to it. Nothing is more vexatious than to be sued by one of your hired men. They are often shiftless and improvident and when they recover from a Saturday night off they feel chagrined to find their purse depleted and at times insist that they were not paid in full.

In full! On account! These are important words in the execution of all commercial documents, such as bills, receipts, releases, etc., and so too are "Cr. by cash," and "Cr. by merchandise."

Get yourself once in the habit of executing these memoranda in a careful and business-like manner and you'll not easily be turned aside by such assurances as "Oh, never mind the receipt! Don't take the trouble to write that down; I'll not ask for it again! That's all right, I'll remember it. I'll send you a receipted bill," etc., etc.

Now another thing; if your wife runs the business, or is a partner in the business, let that fact appear on your circulars, bill-heads, etc. Don't masquerade behind your wife's name, get *personal* credit on the score of the business and then when an account is presented for payment say: "This bill should be made out to me, E. E. Doe; M. E. Doe is my wife." How much more honest it would be to have your wife sign: "Mary E. Doe." It pays to be honest in the long run, no matter how much you may realize from a single crooked transaction.

Strange as it may sound to you, very few business men know how to sign their names in a legal manner. Assuming a man's name to be Richard Brown Roe, the chances are he'll sign himself R. B. Roe, or R. Brown Roe. Either way would not be the strictly legal manner to sign that name. The law expects a man to spell out two of his names—the first of his given names and his family name; that is, the above named individual should sign his name Richard B. Roe.

I once knew a man whose name was Thomas a' Becket Burns. He always insisted upon signing commercial documents and legal papers "Thomas a' B. Burns." Of course those who knew of the existence of the name "a' Becket" knew what he was trying to do; but the large majority voted him a crank. And he was. Another thing which the world is entitled to get from a man is a clearly and legally written signature or firm name.

I've sat here half intoxicated with sweet smells while I have been talking and cannot withhold a word of praise for the splendid condition of your rose houses. Those Marechal Niels; those Bon Silenes; those Jacqueminots are superb. How clean the leaves; how healthy the plants; how large the yield. Everything is well ordered, neat, trim, exact. It proves your skill and your patience. Now, pray tell me if you can,

why there should be such attention to detail at this end of the line and confusion and disorder at the other?

Don't scowl. I'm not personal in my remark. I have no time to reform *one* individual. I'm speaking of young business men as a class.

In conclusion let me impress this fact upon your mind that when a man sets his name to a letter, contract, petition, statement, etc., the law presumes that he thereby gives his unqualified and unconditional consent and approval to everything set forth in the written or printed matter or in both. Now if there be a single word, line or paragraph which you wish to *except* from your approval, note the condition of your signing over your signature, and above all, never sign a paper of any kind until you have read it from end to end.

UNCLE BLACKSTONE.

Youngstown, Ohio.

The unusually mild weather makes everything in the greenhouses look strong and healthy. With the exception of our roses we have not had occasion to use much fire heat. Our Catherine Paul carnations are fine and producing an abundance of bloom, but none going to waste, as the demand for cut flowers for the last two months has been extra good.

Chrysanthemums are in their prime and the demand for plants and cut flowers ahead of any season so far. I had a large number of Lady Selborne, which coming in early were in great demand and brought good prices. No! No!! the interest and demand for the chrysanthemum does not abate any, nor is it likely to do so long as good flowers and good plants can be raised and put on the market. Plants of the early kinds with us left in the open ground have flowered well, an unusual thing for this locality. We have begun to cut our first Romans, being about two weeks earlier than usual, they are good and shall come in well for funeral work.

Our local retail bulb trade has this season increased considerably. Only a few years ago but a very few bulbs were needed to meet the demands. This party, that one and the next one, however, began to set out a tulip and hyacinth bed, their neighbors seeing them also wanted one, and so it has grown that soon a tulip bed will be considered as much a necessity as a geranium bed.

Considerable increase has taken place in the demand for flowering and ornamental shrubs, and it is going to keep on increasing. Why should it not? What is more attractive than a good collection of hardy shrubs for the decoration of our homes? Every florist should keep a supply of the best always on hand; it will certainly pay him, and instead of decreasing a demand for greenhouse plants shall increase it. M. MILTON.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—In florist store; 8 years' experience. Can come well recommended. Address D. L. cure American Florist, Chicago.

SITUATION WANTED—By a young man as florist; 6 years' experience; well recommended. Address H. OLSON, 501 W. North Ave., Chicago, Ill.

SITUATION WANTED—By young Englishman with 12 years practical experience in all branches. S. BATSON, 11 St. Monique St., Montreal, Canada.

SITUATION WANTED—By a first-class gardener, single, German, competent in all its branches, as foreman in a commercial or private place. Best of references. GARDENER, 146 Vine St., Philadelphia.

SITUATION WANTED By young man with 3½ years' experience with English florist. Aged 31; single; sober. W K H A, box 26, Litchfield, Minn.

SITUATION WANTED—As foreman or assistant in commercial place by young man thoroughly familiar with general greenhouse work; understands propagating, etc. Good reference. S. G. BENJAMIN, Fishkill, N. Y.

WANTED—Nursery trade flats. Address Brighton Nurseries, J. A. DE MAIR, Proprietor, Brighton District, Boston, Mass.

WANTED—A practical gardener and florist, single. One who can take charge of and do careful work with vegetables, fruit and flowers. GEO. C. BUTZ, State College, Centre Co., Pa.

WANTED—Practical florist. Must understand the raising of greenhouse stock and forcing of vegetables. Single; give references and state wages expected including board. Address FLORIST, box 753, Fort Dodge, Iowa.

WANTED—A partner to engage in horticultural business in Guatemala, Cent. America. Climate healthy, soil very fertile. A splendid chance for an enterprising man with some capital. Address at once MARTIN BENSON, Cutler, Dude Co., Florida.

WANTED—A practical florist who understands the plant business and growing of cut flowers generally. Must be competent to take charge of a large business; be first class, sober and industrious. German preferred. Address A. A. care Am. Florist.

NURSERYMEN AND FLORISTS.

Advertiser is desirous of locating with an established firm of seedsmen or florists for the introduction to the public of a class of plants destined to become as popular as the rose or chrysanthemum, has the finest stock in America, and is an expert in the production of same. An extraordinary opportunity to a thorough, genuine firm only, on very advantageous terms. L. B., care American Florist, Chicago.

FISHER BROS. & CO.,
NEW ENGLAND NURSERIES, MONTVALE, MASS.

December Floral Fashions.

A great deal of the attention of our florists is given to the rich ornamentation of modern mantel pieces and to corridors in house decoration. There is always one large effect in the latter, it sometimes being the hall fireplace, and again it is the settee where there is usually an oval mirror suspended above. Peter Bogart, who served a long apprenticeship with A. S. Burns, has distinguished himself by elegantly embellishing the Brokaw mansion, where a daughter of the house was married the past week. In the corridor, where there is a settee and mirror above, an exquisite bit of floral business was done in greenery. The settee was formed into a bank of palms, the choicest specimens being used. The mirror was framed in a garland of *Lygodium scandens* which, by the way, is grown very handsomely by Wm. C. Wilson, who makes a specialty of cultivating it. An elegant feature in the drawing-rooms was the designs of passion flowers in straw which were filled with Beauty roses, and the foliage, covered with asparagus, which were placed over the pier glasses. The mantels were festooned with pink chrysanthemums, roses and *Lygodium scandens*.

Fancy chrysanthemums of late varieties are much used for large effects. Mrs. Wheeler and Mr. Moseman, the stayers in old gold and crimson, are arranged with ivies in immense careless bunches over pictures, easels and on cabinets. Clusters of growing vines, such as *Tradescantia*, are quite the vogue placed on mantel shelves and left to trail down. Growing plants in drawing-rooms are considered necessary to their beauty. In the best houses here the parlors are light; the shades are lifted and there are growing plants, vines on the mantels, ferns here and there on tripods, and a few specimen palms on a pedestal wherever there is room for one.

Many of these plants are hired for the season and taken care of by the owners. Mr. Siebrecht has specimens all over the city in mausons where he looks after them, and if they begin to show signs of weakening they are at once replaced and the invalids carried out to the plant hospital at his Rose Hill greenhouses.

Wedding bouquets are of immense size, and also those of bridesmaids. The bouquet holder appears once more and this time with a clasp to fasten it to the glove, I suppose for the reason that it is too heavy to carry. Eleven hundred white violets were put in one bridal bunch this week. Miss Brady's wedding bouquet contained 600 sprays of lily of the valley, and her bridesmaids carried bouquets with 100 *Mermets* in each. Klunder makes a superb bridal bunch of white orchids, with a fringing center of

jasmine. It is about as lovely as anything can be, and his assistant, Wm. Irving Brown, can arrange the most aesthetic corsage bouquet or boutonniere of any floral artist in this city. He makes one of the former of lily of the valley, with the stems turned upward and protruding among white and purple violets, with a bit of lacy fern, *Adiantum gracillimum*, pushing out from every point.

Boutonnieres are a fashionable gift from ladies to gentlemen. They are made up with great care and finish and cost from \$2 to \$3. Roman hyacinths with a center of white violets is among the choicest boutonnieres for full dress; they are quite large. For street wear a single chrysanthemum is considered elegant. Violets are in great demand for corsage bunches to be worn in the street. They are pinned outside the wrap if the weather permits, and inside on the dress if there is danger of their being frost bitten. Women will always take care of their violets. They are the sweetest and choicest blossom a flower lover knows. Hanft Bros. have had a run on Neapolitan violets.

A great many brides are carrying richly bound prayer books instead of bouquets. A prayer book bound in white plush and gold was this week ornamented with Scotch heather. It was so elegantly embellished that the arrangement cost as much as a bouquet. The heather sprays covered one side and a rich sash crossed one side the cover. It was certainly very tasteful and beautiful.

New York. FANNIE A. BENSON.

News Notes.

BALTIMORE.—Mrs. R. J. Halliday died suddenly October 29.

COLUMBUS, O.—Florist Jno. R. Hellen-thal lost his wife Oct. 5.

ZANESVILLE, O.—E. L. Koethen, the florist, was married Nov. 13.

MANCHESTER, PA.—Augustus Doll has built a new rose house 80 x 20.

HASTINGS, NEB.—David H. Holmes has built a new house 100 x 12, heated by hot water. Also an office 12 x 12.

NEVADA, MO.—The thirty-first annual meeting of the Missouri State Hort. Society will be held here Dec. 5 to 7.

ALMA, MICH.—Charles Long, formerly of Rochester, this state, will start in the plant and vegetable business here. He is building three greenhouses, one 22 x 100 and two 12 x 100 each. He would like wholesale price lists from which to select stock.

LAWRENCE, KAN.—F. Barteldes & Co. have added to the rear of their store a warehouse with three floors 117 x 50 each,

containing machinery for cleaning grass seed, etc. They report that Kansas crops are much shorter than last year owing to the drought.

CINCINNATI.—W. Siedel has opened a floral store at 497 Vine street. The initiatory steps are being taken to form a florists' club. Secretaries of other clubs will confer a favor by forwarding copies of their by-laws to R. Witterstaetter, Sedamsville, Cincinnati, O.

DENVER, COLO.—Braun & Satterthwaite have purchased four acres of additional land and are building two houses 100 x 20 each, heated by steam. Thos. Chapman has built three new houses, 40 x 18, 40 x 22 and 60 x 29 respectively. J. L. Russell is building a new house 75 x 20 and has just completed an eight-room dwelling in connection.

ALBANY, N. Y.—The store 21 d attached conservatory of H. G. Eyres & Co., 36 North Pearl street, was completely destroyed by fire on the morning of Nov. 24. Nothing was saved but the books. The conservatory contained a very fine stock of decorative palms, etc., recently bought in for winter work. The insurance is about one fourth of the damage. The firm opened store the same day at 11 North Pearl street, where they will remain until their old stand is rebuilt. The building was owned by Col. James Hendrick.

MILWAUKEE.—E. Elliot has given up business for the present on account of poor health and has leased his greenhouses to Herman Schwoetke, who will conduct the business in connection with Patterson Bros. as usual. Mr. James Currie will on May 1 resign his position as superintendent of Forest Home cemetery. He will again take an active part in the firm of Currie Bros. Mr. Wm. Martin, who has been Mr. Currie's assistant, will succeed him as superintendent at the cemetery. Frank Whitnall will leave for California in January to enjoy a milder climate, in the meantime growing callas and palms for the Milwaukee market.

SAN FRANCISCO, CAL.—At the regular monthly meeting of the State Floral Society November 9, an interesting paper on the chrysanthemum was read by Mr. John H. Sievers. The paper was followed by a general discussion on the culture and treatment of the plant. A large number of new members were admitted to the society and the membership roll now bears over fifty names representing fifteen counties of the state. The subjects for discussion at the next meeting will be spring flowering bulbs and rose growing. Exhibits of chrysanthemums, roses and dahlias were made by Miss Blanche Platt, Mrs. C. Ware, A. D. Pryor, John H. Sievers and Charles V. Parker.

THE PRINTED REPORT of the Proceedings of the second annual convention of the Association of American Cemetery Superintendents held at Brooklyn, N. Y., Sept. 5-6 last, has been received from Secretary A. H. Sargent, Akron, O. It is neatly printed, contains the many practical and interesting essays read at the last convention and should be of great value to any one connected with or interested in cemeteries. The essays upon "Landscape Gardening in Cemeteries" by R. D. Cleveland, "An Ideal Cemetery" by F. Furich, "Lawns" by Wm. Salway, "Greenhouses and Flowers" by Jno. G. Barker and "Evergreens in the Northwest" are of interest to the general horticulturist as well.

The Seed Trade.

SEED TRADE ASSOCIATION.—Geo. S. Haskell, Rockford, Ill., president; Albert M. McCullough, Cincinnati, secretary.

The Wanamaker stores in Philadelphia and The Fair, Chicago, are in the seed business with retail packets at two cents each.

Of newspapers in the seed trade for 1889 we hear of but two, one in Chicago and one in Minneapolis. Small country journals running the advs. of Everitt & Co. are not included.

Reports are current concerning a new organization of seedsmen. Does the present association need reform? And if so, can it not reform itself? We should think so.

H. W. Buckbee, of Rockford, is making great preparations for his 1889 seed trade. He will have a colored cover.

L. H. Read, of Cabot, Vt., is now at Rutland, Vt., and the new firm is Giddings & Read.

The following seedsmen passed through Chicago during the last week of November: S. Y. Haines, Mr. Vanderbilt, of A. B. Cleveland Co., T. N. Griswold, Geo. S. Haskell, H. W. Buckbee, J. M. Kimberlin & Son, A. H. Goodwin, C. R. Root.

At Minneapolis, Shuman & Co. have gone out of business; J. E. Northrup, of N., B. & G. Co., has been elected Park Commissioner. At St. Paul, F. N. Long has sold out his seed and wire business and will start for Alaska in the spring.

Flowers in the Cemetery.

[Extracts from a paper read before the American Association of Cemetery Superintendents by John G. Barker, Forest Hills, Boston, Mass.]

Although you have given me a wide range, I will try and keep to the text given, and that you may understand why we place so much dependence upon flowers as an important feature at Forest Hills, allow me to give you a few facts as a basis. This season plants were set out on seven hundred and fifty-eight lots; a few of these lots have one flower bed only, the larger majority, however, have two, several three, and a few four beds on each lot, so that it is quite safe to say that at least fifteen hundred beds of plants were set out on the various lots this season. Some of you, perhaps, are saying, why, that cemetery must be one vast flower garden. By no means, there are now a few over 3,900 lots sold, and 758 only have plants set out upon them; there are very many vacant spaces and bare lots, I assure you. But how about the number alluded to? These are all paid for annually, or by a deposit of money, which provides that plants shall be perpetually set out. Of this number, 312 have this provision, and 456 are paid for annually.

As to their uses: The large plants just referred to are placed in summer, some of the best of them, under the portico of the receiving tomb, which is supported by arches. The taller ones in tubs are set directly under the archways; here they receive an abundance of light, but still protected from the rays of the sun. Here they do well and look well, and add very materially to the appearance of this particular place, being opposite the large fountain, the surroundings of which are always neat and attractive, and where every one drives or walks by; the larger portion, however, of these plants are arranged in groups in a partially shady place, where they get the morning sun only; those in large tubs and boxes are

out of the ground, while those in pots are plunged in the grass, not being removed from the pots. In this peculiarly well adapted place, arranged in this way, they have a natural appearance which should always be studied in order to give the most pleasing effect; this arrangement has proved very satisfactory and certainly is far preferable to scattering them singly all over the grounds, one here and another there, which amounts to nothing at all. In this location is a small lily tank and a good sized rockery, laid out in a diversified manner, with winding walks and bridges and a summer house. This is planted nearly exclusively with shrubs, hardy plants and ferns, and we hope to introduce many more of our rare hardy plants and ferns at this well adapted place for them. It is always kept neat and clean, and with the little fountains and trickling water, you will always find visitors on a hot day seeking the grateful shade of this attractive spot, not on account of any gaudy appearance by any means, but the natural simplicity of the place.

We have on our lots but few set beds; by this I mean masses or groups of color in foliage or flower; these are placed in the more public places. Of course there are some, as we have proprietors who have their preferences and give their orders as to how they wish their lots planted, but the prevailing way, and by far the most satisfactory, is the mixed system of planting, for the reason that there is always something in bloom, and if any one plant becomes shabby or dies out it can be removed and the others will rapidly fill up the space. In this way, when some of the earlier flowering plants give out they can be removed and not missed, and by keeping the dead blooms and leaves all picked off and the taller plants tied neatly to stakes, you always have tidy and attractive flower beds.

Permit me to call your attention to the planting of graves. A great many are planted every season, and very many prefer the mixed style of planting, for the same reason that I have already given in regard to the beds on the lots—there is always something in bloom. In my pamphlet, I make reference there, and reiterate in part what I then said. Very many like pansies in the spring, but you all know that they are of little use after the hot weather sets in, and in many cases after being removed, variegated alyssum is planted in the center of the grave and an edge of alternanthera around it, or Pilea repens in the center surrounded by Alternanthera paronychioides major; these two forms are especially adapted to small graves, and are neat and pretty, or you can use for a center row the Crystal Palace Gem pelargonium, or santolina, next to that alternanthera with an edge of Echeveria secunda glauca, or mexicana. There are a large number of graves planted with the common ground myrtle or periwinkle, and when well cared for it is very satisfactory, the deep green leaves contrasting finely with the delicate blue flowers. It is usually in flower about Decoration Day, a time when we want the graves to look well. The ivy is also used, and when planted in good soil and occasionally top dressed and kept clean always look well. This and the myrtle can be edged with the small hardy Euonymus radicans variegata, and with care will last many seasons without transplanting. Three other hardy plants I have read of as being appropriate for planting on graves, viz.: Campanula pusilla alba is highly recommended and

is said to produce a dense mass of pure white flowers, also Campanula carpathica alba and C. barbata alba, which is described as one of the sweet white flowers that abound in the rich, green meadows of Alpine France and Switzerland, and then there is the well known Iberis gibraltarica and sempervirens, the foliage of each is a handsome evergreen, the flowers of gibraltarica are of a purplish white and sempervirens of a pure white. I am asked to speak of the charges for planting. This I think would be difficult to do and make a rule for any other place, as circumstances are not alike; for lots of 300 feet the rule has been to charge the same for flowers as we receive for the care of the lot, which is \$5, making \$10 for care of lot and plants; this includes watering in dry weather. For larger and smaller lots the charge is in proportion to what is required. For planting graves, \$3 to \$5; for care of myrtle graves, \$2 each season, which includes covering with pine needles and leaves for the winter. All borders and graves are thoroughly prepared before planting by being trenched at least eighteen inches deep and a good supply of well decomposed stable manure thoroughly worked in. This is a great help in retaining moisture in dry weather.

THE AMERICAN GARDEN THE AMERICAN FLORIST

BOTH
\$1.85
Before
JAN. 1.

After Jan. 1st the price of the American Garden will be \$2.00.

The "special numbers" of the AM GARDEN during the past year have been a Rose number, a Water Plant number, and two Chrysanthemum numbers. During the year to come there will be several special issues, very much finer than any yet issued. The December number, ready Dec. 1, will be undoubtedly the finest issue of any gardening magazine ever issued in this country and will be peculiarly rich in fine illustrations and valuable articles. The GARDEN is so greatly improved that its low price is a marvel to many, yet the advance during the year to come will be far greater in every way.

Subscriptions for 1889 are received now (up to Jan. 1) at \$1.00, including numbers of this year from November. After Jan. 1 the price will be \$2.00.

With AMERICAN FLORIST, one year, \$1.85, if sent before Jan. 1st; WITH ANY BOOKS AND PERIODICALS AT REDUCED PRICES. Address, stating your wants,

E. H. LIBBY, Publisher,

751 BROADWAY, N. Y.

ADDRESS, PUBLISHER

127 Strand,

LONDON, ENGLAND

Washington.

The trade in cut flowers has been unusually dull during the past month, the supply especially of choice roses far exceeding the demand. Florists in consequence have been animated to renewed efforts and several novelties in designs have appeared within the last few days. Notably so an artistic representation of the Executive Mansion by the Smalls, on the occasion of their chrysanthemum show which opened to-day. In their largest show window, some twenty feet across, the White House and its approaches are faithfully represented, the foreground of bright yellow, the walks of deep maroon chrysanthemums, and the roadway of natural cement. A well proportioned fountain is playing on the front lawn, then rises the familiar porte-cochere with its column and covered driveway, and back of that the main front of the White House with every window and door jamb, every pediment and frieze accurately given, the whole in white chrysanthemums, etc. A most perfect piece of work in floral designing. Above all, suspended in graceful folds across a staff hung the national flag in flowers of red, white and blue.

Mr. Chas. F. Hale has attractive designs in both of his windows. In one a shaft eight feet high representing the Washington Monument, made up of chrysanthemums. The other window shows "Gates ajar" four feet high with the white columns and arch gracefully entwined with garlands of La France and doves perched on the portals.

W. S. Fisher lately showed a Masonic altar piece three feet high with emblems. The whole made up of immortelles and seemingly giving great satisfaction.

Other florists are also making fine fall displays. Schmid & Sons and also John Saul are doing a good trade in bulbs. Studer I learn is shortly to open a store-room and office in the city.

November 8.

A CALIFORNIA SUBSCRIBER writes: "Tell the Chicago florist who is visiting our state that if he will visit Sonoma county during the seasons for roses and corn he will find them of as good quality here as anywhere."

THE HORTICULTURAL MAGAZINE, Rochester, N. Y., has suspended publication, the last number being the September issue.

VENTILATING.

THE PERFECTION Ventilating Machine

I had on Exhibition at the
NEW YORK FLORISTS' CONVENTION
was pronounced by able judges the
LEAST COMPLICATED, SAFEST,
STRONGEST, EASIEST,
and most rapid working machine ever
offered to the public.

ALBERT M. HERR, Lock Box 338, Lancaster, Pa.

Daily Record of Work Done at the Lincoln Park Greenhouses, Chicago, 1887.

December 1—Tem. morning 30°, noon 38°, evening 37°. Wind SE. Finished potting rooted cuttings of alternantheras. Potted rooted cuttings of matricarias and santolina. Cleaned old geraniums. Commenced propagating Mt. of Snow geraniums.

2—Tem. 37, 41, 40. S. to WSW. Continued propagating Mt. of Snow geraniums. Pricked in boxes rooted echeveria offsets. Repotted alyssums and maura-dias into 3-inch pots.

3—Tem. 41, 41, 44. SE. Same as yesterday.

4—Tem. 53, 40, 30. SW. to W. Sunday.

5—Tem. 20, 31, 32. W. to S. Propagated Thymus argentea. Pricked in boxes echeveria offsets. Tied carnations. Cleaned various plants.

6—Tem. 30, 42, 40. SW. to SE. Same as yesterday and commenced thinning foliage of little geraniums.

7—Tem. 37, 42, 35. SW. to N. Same as yesterday.

8—Tem. 38, 42, 36. NE. to E. Continued propagating Thymus argentea, thinning foliage of little geraniums and cleaning plants in houses.

9—Tem. 38, 41, 40. SE. Finished propagating Thymus argentea. Propagated begonias in variety and crotons. Thinned foliage of little geraniums.

10—Tem. 40, 41, 40. N. Potted rooted cuttings of begonias and some coleus. Cleaned plants. Sowed a box of holly-hocks.

11—Tem. 36, 34, 32. NE. to NW. Sunday.

12—Tem. 26, 24, 27. W. to SW. Cleaned and pinched alternantheras in No. 3. Commenced cleaning cannas. Commenced propagating Achyranthus Lindenii. First lot of primulas now in bloom.

13—Tem. 30, 39, 40. S. Continued propagating Achyranthus Lindenii. Nipped superfluous foliage from little geraniums. Cleaned plants.

14—Tem. 32, 40, 35. SW. to WNW. Same as yesterday.

15—Tem. 30, 34, 30. NW. Same as yesterday.

Print your SPRING TRADE LIST in the AMERICAN FLORIST. It will cost you less money and do you more good than to print and mail your list yourself. We will print and mail your list, in the columns of this paper, to 5,000 buyers for much less than the postage alone would cost you. A full page in the FLORIST costs only \$42 for one insertion. It would cost you twice that sum to get up a list of your own and mail it to 5,000 addresses. Think it over! We can save you money and secure you better results at the same time, for the FLORIST is preserved while your trade list otherwise mailed would rarely be kept on file. We will print extra copies for you—from the type after being set—at a nominal rate if you wish extra ones to mail in response to requests. If half a page is large enough it will cost you but \$21 for the service.

GARDEN AND FOREST

An Illustrated Weekly Journal of
HORTICULTURE, LANDSCAPE ART AND FORESTRY.

Edited by Professor C. S. SARGENT, of Harvard.

Every progressive florist should read this new journal. Its pages contain from week to week articles on flowers, their cultivation and the most artistic methods of using them for purposes of decoration. Subjects bearing on the work of florists and the influence of their work upon the public taste, receive special attention. The paper is read regularly by many of the most intelligent florists in the country, who find in it information (especially about new flowers and plants) and suggestions not to be found in any other publication. Now is the time to subscribe.

\$4 00 a year. Club Rate, 5 Subscriptions for \$16.00.

GARDEN AND FOREST, Tribune Building, N. Y.

If you wish to make a Christmas present to your friend, send him GARDEN AND FOREST for a year. Every week will increase his appreciation of the gift.

CURRIE BROTHERS, SEEDSMEN AND FLORISTS,
MILWAUKEE, WIS.

HUGHES' SOLUBLE FIR TREE OIL.

FLORISTS AND NURSERYMEN SHOULD
NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectually all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants: such as ferns, etc., if used as directed. Used as a WASH it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

Dog faciers should not be without it! It makes a silky coat and produces healthy skin action; kills fleas, and is excellent for washing dogs.

Housewives should not be without it! Used with ordinary household soap it is an effectual DISINFECTANT, BLEACHER and CLEANER OF FABRICS. It kills insect life on man, animal, or plant, without injury to the skin, wherever parasites may appear.

Put up in 1 gallon tins, \$3.25; Full directions & trade Put up in 1 quart tins, \$1.00; mark on each package.

Our Circulation.

For the benefit of our advertisers we submit the following statement of the issues of the AMERICAN FLORIST for the past year:

December 1, 1887	4,750 copies
" 15, 1887	8,000 "
January 1, 1888	5,000 "
" 15, "	5,000 "
February 1, "	5,000 "
" 15, "	5,000 "
March 1, "	5,000 "
" 15, "	5,000 "
April 1, "	5,000 "
" 15, "	7,000 "
May 1, "	5,000 "
" 15, "	5,000 "
June 1, "	5,000 "
" 15, "	5,000 "
July 1, "	5,000 "
" 15, "	5,000 "
August 1, "	6,100 "
" 15, "	6,000 "
September 1, "	6,000 "
" 15, "	5,250 "
October 1, "	5,500 "
" 15, "	5,500 "
November 1, "	5,200 "
" 15, "	5,200 "
Total	129,500 copies
Average per issue	5,395

The above figures are taken from our bills for press-work and represent the actual number of copies issued.

While we do not believe that the value of a paper as an advertising medium is governed entirely by its circulation—depending much upon whether it reaches those who are interested in and want your goods—still it is an important factor, and in these days of magnificent claims by most publishers we believe our advertisers will duly appreciate the figures above submitted. As to their correctness we stand ready to offer conclusive proof if desired.

"WE LIKE THE FLORIST." "Each number is better than the last." "We couldn't get along without the FLORIST." "Can we help you in any way?" These are some of the words of encouragement we find in letters from subscribers when renewing their subscriptions, and which are duly appreciated. Yes, there is a way that you can help us and that is by making all your purchases from those who advertise in this paper and by making special mention of the fact that you saw their adv. in the FLORIST when ordering. We doubt if there is anything that a florist uses in his business that is not advertised in our columns, and we believe that every one of our advertisers deals on the square. As quick as one does otherwise he can not advertise in these columns. Some of the "shady" men in the trade have ascertained this fact. Are we not doing a good work in this way? Is not this a benefit to the honest wholesalers as well as protection to the buyers? Let us say here that should any goods purchased from our advertisers prove to be other than as represented and the seller fail to properly adjust the matter we want you to report the matter to us. If we fail to secure an equitable adjustment and are convinced that a swindle was perpetrated that advertiser will in future be excluded from our columns. But please don't write us until you have corresponded fully with the shippers and failed to secure a satisfactory adjustment from them.

THE HELP FOR CUT FLOWER WORKERS AND FLORISTS, FLORAL DESIGNS,

PUBLISHED BY A. BLANC AND J. HORACE McFARLAND,

Has been kindly received, although out but a few weeks. It hits a weak spot, and helps those who sell floral work in many ways. 162 royal octavo pages, including 50 plates of designs, printed in soft tints and rich tones, and a complete treatise on floral work. Send for it, or send for a prospectus if you want to know more about it first. The extracts below show how it has impressed subscribers:

"Cheap at \$5 per copy; to florists in small towns must be very valuable." H. H. HUNTRESS, N. H.

"A book that no local florist ought to be without. * * * Will save me time in selling set pieces." J. FULLER, Mass.

"Well pleased; * * * admire plain English hints upon design work." HUNTS, Pa.

"I find it most satisfactory to show my customers to select from. It is the proper thing in the proper place." J. G. EISELE, Phila.

"Highly creditable to the floral art." J. BREITMEYER & SONS, Detroit.

"For the florist doing a retail cut flower business is almost indispensable, since it illustrates that which cannot well be described. It will help to improve the taste, and give the average florist a source for ideas." E. A. SEIDELWITZ, Maryland.

PRICE, substantially bound in cloth, \$3.50, on receipt of which it will be mailed promptly by

J. HORACE McFARLAND, Harrisburg, Pa.

Price list of Surplus Stock mailed free.

I. N. KRAMER & SON,

MARION, IOWA.

Elmira, N. Y.

Grove P. Rawson built a large house—especially to exhibit his chrysanthemums—15 feet high with three gables, 24 x 30 inch glass, ventilators and corners of colored glass; an admirable house for exhibition purposes.

His collection of five hundred choice selected varieties are hard to beat any where, attracting crowds of visitors and favorable comments of the press. The center of the house is a huge pyramid of yellow sorts, with blocks of pink, white red, bronze shades, etc. on either side. Around the whole front are iron vases filled with compact growing kinds. The plants are grown in all shapes, with and without stakes. He regards Rollin Thacher, an '86 seedling of his own growing, as the best golden yellow Chinese in existence, perfect in shape, color, size, free growth and bloom. His Advertiser of 1887 is a lemon yellow Mrs. C. H. Wheeler, and even handsomer than its parent. He expresses disappointment in the imported novelties, but few equaling present kinds, and far inferior to American seedlings.

BULLETINS 11, 12 and 13 from the New York Agricultural Experiment Station at Geneva, N. Y., have been received from Mr. Peter Collier, Director in charge. They are devoted entirely to agricultural matters.

"15 YEARS' EXPERIENCE. THE GURNEY SAVES 33% PER CENT IN FUEL."

Letter from Thomas Gray, of Fitchburg, Mass.,
In reference to

GURNEY HOT-WATER HEATER.

FITCHBURG, MASS., April 13, 1888.
Dear Sirs:—In answer to yours, asking my opinion of the Gurney Hot Water Heater which you sold me, would say that I have had fifteen years' experience in heating hot houses by water, and must say the Gurney Heater purchased of you has proved itself a wonder, both in power and economy, using one-third less fuel to get same results than any heater I have ever used. The brick-lined pot I consider a special feature, as it renders combustion equal throughout the entire pot.

Yours truly,
THOMAS GRAY, Florist.

COLUMBUS, O.—The State Hort. Society met for the last time this season on Oct. 4.

IRVINGTON, N. J.—E. Jacobi has built four new houses—three 16x60 each and one 11x60. Also a potting and work shed 13x63. He has put in apparatus to heat by steam.

EASTON, PA.—The exhibition of the Lehigh Valley Hort. Association which opened November 5, was a very handsome display. E. P. Wilbur, of South Bethlehem, shipped a car load of plants and flowers for the occasion, in care of his gardener, John Cullen.

COUNCIL BLUFFS, IOWA.—On the occasion of the opening of the Omaha bridge features of the procession were the displays of the local florists and seedsmen. L. A. Casper, W. H. Foster, J. R. McPherson, E. C. Erfing, Hess & Swoboda and the Emerson Seed Co. each made excellent displays.

WORCESTER, MASS.—The Worcester County Horticultural Society held its annual meeting Nov. 7 and elected the following officers: Henry L. Parker, president; Stephen Salisbury, H. F. A. Lange and George E. Francis, vice-presidents; Edward Winslow Lincoln, secretary; Chas. F. Brooks, librarian and treasurer.

SEED OF EVENING GLORY.

(White seeded var.), i. e. Moonflower. Pink Moonflower is a novelty not yet offered the trade. Eulalia, Jap. var. and Zehrina.

SOCIETY OF AMERICAN FLORISTS.

JOHN N. MAY, Summit, N. J., president; W. J. PALMER, Buffalo, N. Y., vice-president; WM. J. STEWART, 67 Bromfield St., Boston, Mass., secretary; M. A. HUNT, Terre Haute, Ind., treasurer. The fifth annual meeting at Buffalo, N. Y., August 20, 21, 22, 1889.

OUR HOLIDAY SUPPLEMENT which every subscriber receives with this issue will we think be appreciated as an extremely useful present. A large number of subscribers have written us that they found the illustrations in the FLORIST of great value to show customers what certain decorations and styles of work were like when complete, and always with benefit to their trade. Knowing that the engravings would be much more convenient for reference and to show customers if together rather than scattered through the volume, we have arranged them as seen and present a copy to each subscriber herewith. We have printed several thousand extra copies of this supplement, omitting a portion of the matter on the title page, so that those of our subscribers who wished to purchase a quantity for presentation to their customers would have abundant space in which to print or stamp their business card. We believe that no better advertisement could be devised for a florist than copies of this supplement, for they would certainly be much appreciated and undoubtedly be preserved by the recipient. We will make low rates on quantities for this purpose. See prices quoted in our adv. on page 209.

REV. S. REYNOLDS HOLE, the author of that charming work, "A Book About Roses," has just celebrated his seventieth birthday at his home in England.

THE CHRYSANTHEMUM SHOWS in England have been as numerous as ever this season and there is apparently no abatement in the popularity of this plant there.

CHRYSANTHEMUM CENTENARY.—The National Chrysanthemum Society of England proposes to commemorate the introduction of the chrysanthemum by a centenary celebration. The form of the celebration has not yet been decided upon.

Notes From Around New York.

A visit made to any of the numerous florists' establishments around New York will always be found profitable, and it is to record some of the impressions received during a trip of this kind that this paper is written.

One of the marvels of the day is the number of greenhouses that may be noticed in every direction within twenty miles of the metropolis. There seems to be no limit to the number of florists, from those who have thousands of dollars invested to those who possess only two or three greenhouses; and as all appear to make a living, many, in fact, doing somewhat more than this, we may be sure that though production increases consumption does so likewise.

The majority of growers are apparently about equal in ability as regards the cultivation of the plants that are usually grown for market purposes. But there is considerable inequality in the business ability of florists. The man who makes the most money is the man who uses the best judgment as to the market at his disposal. For instance, at one place was seen a large number of pot roses that were bought at auction for two cents each. These plants were of the various market kinds sufficiently large to occupy 4 and 5-inch pots. Plants if bought per order would easily average twenty cents each. The man that grew these roses was wrong in his judgment as to the market for them and suffered accordingly. Probably there is not a florist living who does not make mistakes and who will continue to do. But to the man of sound judgment mistakes are a help to increased success.

When we have grown our plants only half our work is accomplished. Next in order is the disposal of them. The most difficult part of our undertaking. To sell these plants or flowers at a profit, and to sell them just at the right time so that successive crops may be grown on the benches and every inch of room made available for all it is worth, is the business part of our daily operations, and one that taxes every man's ability to the utmost. For any man to grow an immense amount of stock without being sure as to his power to dispose of it to advantage, would almost certainly result in much of it being sacrificed. Not every one is so situated as to be able to grow only that stock which he is sure pays the best. Few markets in the country can equal that of New York. Those who have their business located in smaller cities must necessarily occupy their houses with a varied assortment. It is, however, the man that can confine his operations to two or three specialties who succeeds the best in reaping the best return from his labors and investment. He can concentrate his attention and

plan his work much better when only a few objects demand his care than he could if they were more numerous. This fact is becoming more and more generally recognized and needs no argument. Men who once thought that to make their business a success it was necessary to have a little of everything, now discriminate and select. This method will be still more practiced, and perhaps it will not be too much to say that ultimately the various good growers will each be noted for some one or two articles that have become his specialties.

It is a fact worthy of notice that no grower has every class of his plants of equal degree of excellence. In one establishment the Beauties and Mermets may perhaps be as fine as can possibly be grown. In a neighbor's these varieties may not be as good, but possibly the Perles and Niphetos will be of superior merit. Teaching us that causes, very often looked upon as of slight importance, determine the character of our stock for the season. Nothing in the cultivation of plants should be looked upon as of minor moment. Mildew becoming established, the continuance of a cold atmosphere and a wet soil thereby checking growth, a few weeks delay in planting, improper feeding, excessive pruning, all help to deteriorate our roses. Constant attention is required, and how can this always be given in commercial places where a great number of plants is grown? Better plants will be grown and more money made by carefully deciding beforehand what we are likely to sell and then confining our operations to these few things and concentrating our energy and attention upon them in such a manner that we shall be noted for their superiority.

Among the many good growers of roses around New York not one is of higher repute than Mr. Ernest Asmus. His place when seen at the beginning of November was remarkable for the neatness and system everywhere displayed. Though many of his houses are old and, therefore, not so conveniently built for the production of cut flowers, yet the roses in these old houses look equally well with those that are in houses of later erection. But few roses appear to be grown the second year; all varieties of teas being of this year's planting. Perles were looking exceedingly well, with strong and luxuriant growth, not a sign of any malformed flowers. Niphetos, also, were in fine shape. Few rightly appreciate the capabilities of this rose. Grown as it should be, small and even medium sized flowers should be the exception. The finest Niphetos that the writer has ever seen were grown in solid beds, and the plants were three years old. As a rule, because Niphetos flowers freely and the shoots are of moderate length, the rose is relegated to the side benches,

where it is naturally confined for want of room and seldom shows its true character. But no rose repays generous treatment better than this one. Plant it in the center of the house in soil not too deep; allow it to remain several years; feed it freely but judiciously, and the grower will be astonished at the strong stems and large flowers that the bed will produce. Niphetos requires very little, if any, pruning. The dead and exhausted wood should be cut away once or twice each year, and if when the flowers are gathered the shoots are cut to the old wood, no other pruning will be found necessary. Should any one follow this plan with this rose let him not fall into the mistake of supposing that it should be rested through the summer. This would be injudicious treatment for any tea rose, and it is especially so with Niphetos. Get vigorous and clean growth through the summer and abundance of flowers will follow through the winter.

One of the most striking features seen are two beds of American Beauty. These roses are grown in shallow benches in the center of the house, and have produced a great quantity of vigorous canes which are tied down close to the soil. But these canes can hardly be seen on account of the large number of smaller shoots thrown up all over the bed and which evidently were all going to flower. After seeing these beds no one need detract from the merits of this glorious rose. If one man can make such a complete success of it, then those of us who have heretofore met with failure in its cultivation have an incentive to renewed exertions. What one man can do is within the power of another. Whether Mr. Asmus expects to have the rose in as fine a condition all through the winter is not known to the writer. Certainly if he does he is to be envied, not only for his skill but also for the pecuniary returns that he will receive. Several houses of hybrids also promise well.

In a large house in which lilacs, later in the season are grown, was a magnificent bench of yellow chrysanthemums. It would not be possible by a written description to convey an adequate idea of this magnificent bed. Obviously, the plants must have been growing there all summer, they being about six or seven feet high and covered with as large flowers as can be seen anywhere. Many other chrysanthemums are grown and all show evidence of superior cultivation. Mr. Asmus confines his operations to roses, chrysanthemums, lilacs and bulbs.

At the establishment of Kretschmar Bros., Flatbush, L. I., may be seen the finest Perles and Bon Silenes that have come under my observation. One peculiarity in their cultivation is the extraordinarily heavy mulch that is used. Apparently from three to four inches in depth. It is commonly supposed that heavy mulching for winter work is contrary to sound principles; but here is direct evidence in favor of the practice. The roses are entirely free from mildew and spider and cannot be surpassed for luxuriance of growth and quantity of bloom. Though the mulching system works to such advantage with these gentlemen, yet it cannot be advised as the best for every one. With many men, manure used so freely would only result in ruin to the roses. These gentlemen, to judge by their stock, certainly know how and when to use it. Houses in which there is the maximum of sunlight may perhaps be better adapted for this system than those not so favored.

A fact related by one of the firm is worthy of remark. He stated that at one time everybody in Flatbush grew cyclamens. But now nearly all have given up their cultivation owing to disease that makes its appearance after the plants have been grown two or three years. Bouvardias can be seen here in all their old time glory. Large plants and covered with flowers. A novel plan was also observed. The growing of the white Dahlia *Camelliaeflora* under glass for the purpose of cutting the flowers during the late summer and fall months. The plants were past their prime, but had evidently been covered with fine flowers.

Mr. Messeburg of the same neighborhood, takes rank with the best florists for a well arranged and skillfully conducted place. The houses are noticeable for their great neatness. Cemented walks, brick pits, clean houses and clean plants combine to make a perfect picture of cleanliness. The credit is his of having the tidiest commercial place of this section. Why should not this end be more striven for than it is? There needn't be much more expense attached to a right system than to a wrong one. And it is the right system that brings such pleasant results. What a contrast between this place and others with muddy walks, weedy benches and insect eaten plants.

Much has been said about the greater profit to be derived from roses grown in shallow benches in preference to solid beds. Mr. Messeburg can show a house of Perles that have been in solid bed for six years. Such wood and such flowers; no plants grown in shallow benches could ever equal them. As they are now beginning to get rather thin this is probably their last season. Yet it must be remembered that rose plants retained for so many years must have every attention, both summer and winter, in order to produce satisfactory returns. With all these growers La France was not up to standard. Proving that the best growers do not have all their plants in equal ratio of excellence. Carnations with Mr. M. were in perfection. Fine plants and full of buds. The older varieties of white carnations are still grown. One house of Snowdon is particularly well done. Hinze's White are in good shape and so are the colored varieties grown. Smilax though extensively and easily grown is but seldom seen in the best condition. Here it presents a fine appearance. Thick strings of a deep green color; free from the ravages of thrip and without any young growth mixed with that which is now ready for cutting.

The growing of plants for the sale of cut flowers is the distinguishing feature of these places; always, though in limited variety. At Mr. Keller's, Bay Ridge, L. I., palms and ferns together with cut flowers are grown in large quantities for the market. Dealers soon find out what species of plants are best for their trade and growers must choose their stock accordingly. At one time *Seaforthia elegans* was quite in demand, but some of the arecas and kentias have quite superseded it. How the prices of small plants of many of these palms have been reduced. Good medium sized specimens are always sought after, and are sure to bring remunerative prices. *Pandanus Veitchii* can always be sold, but it was surprising to hear that *Dracena terminalis* has somewhat lost its hold on popular favor. Mr. Keller's stock is healthy and well selected for the purpose for which it is grown—for sale to the trade. A great number of ferns in the market

varieties are on the benches and all are looking well. A very fine bed of Niphetos of this summer's planting—stocky plants producing large shapely flowers. Bennetts also are good, especially a bed planted this year. A house of *Cypripedium insigne* looks very well, for the plants are healthy and covered with flowers. But few orchid flowers sell as well as this old favorite, or pay as well. If stocks of *barbatum* and *Spicerianum* were as easily procured, it is doubtful if *insigne* could hold its own. There are also several houses of carnations; plants healthy and well budded.

Mr. Keller has but lately returned from Europe and there is no food for our vanity in hearing him speak in glowing terms of the English and Continental growers. Some way or another we have assumed, on this side of the ocean, that in the growing of roses and other cut flowers we are away ahead. But Mr. Keller has a different impression. If he would write an account of his experience to the FLORIST its readers could not fail of being very much interested.

Mr. Dean, also of Bay Ridge, has a number of houses and he makes a specialty of stock for Easter sales. It would be difficult to find a larger and better assortment of hydrangeas, azaleas and cytisus all to be used for this purpose. To the unprofessional visitor these plants would look anything but prepossessing now, but no display of plants can possibly be more attractive than these will be two weeks before Easter. A very large collection of *Lilium Harrisii* is also grown. Mr. Dean states, that in his opinion, there is likely to be some trouble with the bulbs that, in the future, will be imported from the Bermudas. With his last fall importation a number can now be noticed that are not *Harrisii*; they are somewhat alike in foliage, but the false is dwarfish at present compared with the true and blooms much later, thus making it of no value for Easter work. Before planting all the bulbs are similar in appearance. If Bermuda growers do not exercise care and their stock gets mixed in this way a serious loss may ensue to American florists, and it is well that all should be on their guard against being imposed upon in this way. Mr. Dean has also a large stock of carnations.

Among the growers visited no new carnation of value was seen. We had three new white varieties sent out last spring with boastful advertisements describing them as better than any in cultivation. The writer bought 100 plants of one of these peerless(?) varieties and which was raised in the New England States. It was represented by a friend as first class; but so far it has proved utterly valueless; poor in habit; weak in growth; shy in blooming. Another gentleman stated that he had a scarlet carnation much better than Portia. One hundred of these were obtained from him and the price paid for them just double the price of Portia. Planted on the bench for winter blooming, they have proved themselves identical with Portia in every respect. In fact, it is Portia sent out under the name of "Glowing Coal." No doubt the gentleman from whom it was purchased was also victimized. There is no scarlet carnation yet sent out that is better than Portia—no white better than Hinze's White, Peerless and Snowdon. Anna Webb deserves to be more generally known. It will eventually supersede both Seawan and Crimson King.

ALFRED E. WHITTLE.

Albany, N. Y.

BED OF HARDY HYDRANGEAS.

Bed of Hardy Hydrangeas.

Our illustration shows a bed of hardy hydrangeas (*Hydrangea paniculata grandiflora*) as seen the past season on the grounds of Mr. John White, Waverly Place, Elizabeth, N. J.

The bed was twenty-five feet in diameter and contained thirty plants, the center plants reaching to a height of eight feet. The plants will be seven years old next spring. They were in bloom August 1 and made a handsome show for two months. When at their best there were two or three thousand panicles of bloom, the largest measuring fourteen inches in length and ten inches in diameter at the base.

Visitors came from miles around to see this bed and all pronounced it the finest bed of the kind they had ever seen.

New York Notes and Comments.

In addition to the Horticultural Society's show there was quite a creditable display of chrysanthemums at the American Institute Fair, Mr. Thorpe in particular making a fine show. "Mrs. Alpheus Hardy" was there and received its usual honors; it is hard to name any other plant of recent introduction which has received so much notice. Partly, no doubt, because it appeals to so large a class; many novelties are attractive only to scientific or professional plant lovers. Judging from the extent to which it is already purchased by the trade, it is expected to hold high rank among cut flowers. Nearest it in beauty one would be inclined to put "Mrs. Wm. Barr,"

another white which is full of promise for the florist.

Chrysanthemums brought pretty good prices on the whole—cut flowers are referred to—especially as they became scarcer. J. H. Taylor says his two houses of Comte de Germiny and Gloriosum paid very handsomely, of course they were fine flowers, and these are decidedly popular varieties. Big, showy flowers are the most salable. Small doubt that Mrs. Andrew Carnegie will take a prominent place for cutting, also Mrs. Fottler and Kioto. Mrs. Fottler is an uncommon tint for a chrysanthemum, and it just happens to be one of the colors women greatly admire.

In addition to the regular shows in and around the city a great many guests visited the United States Nurseries at Short Hills in the latter part of November, when the entire place was thrown open for exhibition. It was quite a new departure to have the exhibition take place at the greenhouses and additionally interesting on that account. It was a display especially interesting to orchid fanciers, particularly those devoted to cypripedes. Over fifty species and varieties of this class were in bloom at the time of the exhibition, among them many rare and unique. *C. Arthurianum* was one of the rarities noticed, showing distinctly the character of its parent, *C. Faircanum*. *C. leucorhodum* was another rare form, and also *C. Hyeaenum*, with characteristic green-striped dorsal sepal. *Harrisianum*, *Spicerianum* and *insigne* are to be seen in great variety; these seem likely to be the general utility sorts for cutting, as they are easily grown,

durable and prolific. We hear a good deal about cypripediums in cut flower work, and there can be no doubt of their usefulness, though they could never be used alone. Their stiff habit makes them ungraceful without other flowers; mingled with others they are charming.

Another interesting group at these nurseries is a collection of new anthuriums from Switzerland, chiefly of the Rothschildianum section. Many novelties are promised among them, said to be unique. A good many were specially attracted by the opportunity of seeing the stock of the wonderful new chrysanthemum. It was certainly at a disadvantage this year, having been forced on into bloom, but a sight of the plants gives no doubt of its robust habit. A tremendous lot of *Primula obconica* is here in bloom; very dainty it is, too, though not yet fully established in public favor.

There is a very strong determination in many quarters to bring out a lot of these simple spring-like flowers about Easter. It is a question whether they take greatly earlier in the season, but at Easter every florist is asked to provide something suggestive of spring. Bulbs have been done to death; they are needed, of course, but they are no longer novelties. It seems very likely that some of the pretty spring-like herbaceous plants will sell well if forced for the right season. Hellebores have not been a success here so far. It seems as if something might be done with a lot of the showy anemones; a number of them are specially associated with Easter. All the bulbs or spring flowers are liked when grown in flats; in that case they can be

sold as they grow, to be cut when desired.

The orchid houses which Mr. Foster-mann is building at Summit for F. Sander's American branch all have concrete walls. This is considered a great advantage; it collects moisture to a greater degree than brick, is warmer and soon becomes covered with moss, all working together to produce the atmosphere orchids love.

Ethel Brownlow is a rose our English friends praise very highly, but Mr. May has rooted it out with deep disgust. It is addicted to mildew and every other disorder a well conducted rose should avoid. It is a well grounded fact that a rose which does well in England very often does the reverse here. But then their usual test is out of doors; ours under glass.

Comtesse de Frigneuse does not seem to become very popular, while Sunset is certainly increased in favor. Perhaps the Comtesse has not yet received the exact treatment it demands. Madame de Watteville which, for a time, seemed to meet with little favor, is now coming forward. The flowers exhibited at the recent New York show were larger and better colored than any previously seen; it seemed a formidable rival to Mme. Cusin. There should be a tremendous crop of Beauties this winter; so many growers have enlarged their supply, declaring that it paid better than any other rose.

As for chemical fertilizers under glass, Mr. Taylor, who has been carefully experimenting with them, says that in most cases one is quite safe to leave them alone and stick to good barn yard manure if procurable. They can only be used with extreme caution and in a dilute state, as they are very apt to destroy the delicate feeding roots of such plants as roses and carnations. What are called high grade fertilizers could hardly be used at all with safety, and they all need such careful manipulation that it really seems the wisest plan to leave them alone. We can't treat roses like prize potatoes.

One of the annual revelations of the autumn shows is the number of amateurs who grow chrysanthemums under canvas, and in many cases beat the professionals at it. This was the case at a small show held at the little suburban hamlet of Englewood, N. J. All amateurs, but a good many plants would make professionals tremble for their laurels. One of the most successful exhibitors was the sexton of a neighboring church, whose only glass is a few small frames.

It is likely that next year will see a good many chrysanthemum shows in the small places about New York. The success of this show at Englewood has emboldened its directors to project a local horticultural society, an enterprise which deserves every encouragement.

EMILY LOUISE TAPLIN.

Long Island Plant Notes.

BY WM. FALCONER.

ANEMONE JAPONICA—Don't forget that this isn't any too hardy, but under a good mulching with a shutter over it to keep it dry, you may expect to find it all right next spring.

FROM A CHOICE strain of seed of garden varieties of pentstemons we get most as good sorts as we already have under names.

LILY BEDS—I had these forked over three inches deep last week, and all

bulbs, large or small, that were turned up were picked up and saved and planted over again. A lily bulb should not be nearer the surface of the ground than at least four inches, this is to avoid the heat and drought of summer, the freezing and thawing of winter and being heaved out of the ground by frost. After forking I mulched the ground with rotted manure and added a coating of dry leaves over longiflorum, Krameri and other somewhat tender or uncertain kinds.

CYTISUS RACEMOSUS.—I am glad Mr. Keller called attention to it, page 183. I grow a lot of it and think a great deal of it. One year old plants make beautiful little specimens in 5 or 6-inch pots and they always look so clean and thrifty. When in bloom they are so full and so bright and yellow that they arrest attention and admiration at once. A slight frost won't hurt the plants.

ETHEL is the best conditioned late white chrysanthemum that I have got.

IF YOU HAVE some choice retinosporas, arborvitae, yews, junipers or other dense growing evergreens, don't let the snow destroy them by weighting down the branches and spreading them apart. Just take a piece of marlin or stout string and run it in among the branches to tie them together and prevent their being spread apart by the snow.

SERICOGRAPHIS (Jacobinia) **GHIES-BRECHTIANA** is a name big and ugly enough to kill any flower no matter how handsome it may be, but this pretty little plant is really worth growing. Raised from cuttings in spring, planted out over summer, lifted and potted in September and protected from frost it blooms beautifully in November and December. In 4, 5 or 6-inch pots it forms nice stocky plants that are now laden with graceful panicles of narrow tubular scarlet blossoms.

LIBONIA PENRHOSIENSIS is another very pretty little plant now perfect bunches of bright crimson and yellow blossoms. As a showy plant for either greenhouse or window decoration it is very becoming, but for cut flowers not of much avail as the blossoms soon wilt after being cut. I treat it exactly as I do the sericographis. It is a cross between the above sericographis and *Libonia floribunda*. Although hybrids between species are frequent enough, crosses between genera are not common.

LIBONIA FLORIBUNDA, a Brazilian little plant and near relative of the last two is treated in exactly the same manner. But it does not bloom till *L. Penrhosiensis* is about over. It is the least showy of the three, but it blooms as copiously and is a bigger and bushier plant than either of them.

CACTUSES A-BOOMING.—"What do you think of the boom in cactuses now? I have sold \$10,000 worth this year! and I am only 'small fry,' you know." This is what a prominent specialist writes me under date of Nov. 27. It has set other florists a-working too. One firm is propagating and collecting cactuses with all its might, and another firm knowing the facts would rush into the prickly business too if they could only get some one to grow the plants for them. Careful, brethren, careful! Castuses are most uncivil chaps, not one workman in twenty knows them or loves them, and while they will bear a vast amount of ill usage with apparent impunity, there is a limit even to that, and as a florist should be continually propagating and increasing his stock, he can only do this from vig-

orous thrifty plants, and not from ill-conditioned scrubs. You can't strike a cutting in a few days as you can a coleus, nor can you multiply a variety *ad infinitum* in a year as you can a chrysanthemum.

PRIMULA OBCONICA.—We usually raise it from seed, but sometimes seed is scarce. Some three months ago I divided a lot of old plants into as many pieces as I could get with good crowns, and inserted each piece into a 2 inch pot filled with sharp sand and chopped live sphagnum and kept them near the glass in a close, shaded pit and watered them well. Every bit has now made a nice well rooted plant.

CHRISTMAS ROSES at Christmas are all right by way of variety and oddity, and no doubt a limited number of them will sell well by way of being a novelty and "English, you know." I have a lot of them (*Helleborus niger maximus*) in bloom now in a cold frame and they are quite attractive. In a place where they are sheltered at all times, slightly shaded in summer and in fairly moist soil. I planted them a couple of years ago. They have grown into good strong crowns with leaves nearly two feet long, and now from every crown bunches of large white buds and flowers have arisen. So that I can get the full use of the flowers in winter I have placed a frame with sash over the plants and shall protect them a little from severe frost. There are several species and varieties and between them their blooming period extends from now till May, but all are not pretty or showy. Woolson has a fine collection well established under the trees beside his residence.

BERBERIS THUNBERGII is the prettiest ornamental berried shrub that we have got at Christmas. It is better than the winterberry of our swamps because of its far more brilliant scarlet berries and the certainty with which all native plants bear fruit. Now, if florists will get a lot of these berries now and sow them in boxes they will come up in spring and make nice little plants a few inches high by next fall, then if planted out in a year's time they will be capital stock for sending out.

IT IS SELDOM that a propagator takes to raising plants from seeds with the same enthusiasm that he does from cuttings, but now is a good time to go into the seed raising business. We are more likely to be less pressed for time and room just now than we will be in a few weeks later on, and can better take care of delicate seedlings like gloxinias and begonias. And there is a host of things we can now raise from seeds for our spring sales. Take, for instance, snapdragons, foxgloves, hollyhocks, annual asclepias, perennial coreopsis, pentstemons, larkspurs, anemones, irises and a host more. And among bedding plants especially, there is *Vinca rosea*.

I WAS AT Jobstown, N. J., the other day to see Mr. Gardner. He had a lot of large plants of gardenias. But he says, "what's the use of growing them, the dealers won't take the flowers. They can sell a few, but nothing like as many as I could raise." Why is this? In the London market the gardenia is one of the choicest and most sought for of winter flowers.

IN A ROSE HOUSE he called my attention to a plant of *Perle* that had also produced a branch bearing a true *Sunset*, and another branch bearing a large, full double, flat like a *Malmaison*, bright

ORCHID ARRANGEMENT AT THE RECENT EXHIBITION OF MESSRS. SIEBRECHT & WADLEY, NEW YORK.

yellow rose. I hope he can secure a stock of this last freak.

EUCHARIS MITE.—He showed me some eucharis plants that were affected by the root mite. These plants were perfectly clean a few years ago and he couldn't understand how the mite came there. "Do you grow Roman hyacinths?" I asked. "Yes, thousands of them," he replied. "Well," I remarked, "most likely the mite was introduced by them." It is a fact that Roman hyacinths when imported are often infested with what we know as eucharis mite, which soon finds its way to most every other bulbous plant upon the place, notably amaryllises, crinum and encharis, but it preys more upon eucharis than upon anything else.

HEATHS.—Mr. Gardner has a good word for Cape heaths and grows them very well. Erica Wilmoreana is his favorite. It is an easily cultivated, free growing, sure blooming species. He has a large number of plants in 5 inch pots and which are two years old and eighteen to twenty-four inches high and correspondingly bushy. They are growing in cool, light airy greenhouses. The soil used for them is a dark colored peat found in the neighborhood and a sprinkling of sharp white sand; and so that the young roots inside the pots may not get dried

up or injuriously affected by changes of temperature and drying conditions, the pots are plunged in sphagnum moss inside larger pots. During the summer months he plunges them out of doors in an airy place not sheltered from the winds on any side. Here we can water them as liberally as we please with impunity, whereas were they in sheltered places where the wind would not reach them on every side they would soon become unhealthy.

MR. HUGHES' CALADIUMS were the chief attraction at the exhibition connected with the last meeting of the Florists' Convention in New York. I was at Bryn Mawr the other day and found these beautiful specimen caladiums at rest under a greenhouse bench. The varieties consisted of Boieldieu, Calypso, Candidum, Chantini, Clio, Mad. Alfred Bleu, Mad. Marjolin Scheffer, Mons. A. Hardy, Meyerbeer, Pearl of Brazil, Prince Albert Edward and Triomphe de l'Exposition. The little Argyles is one of the prettiest and most useful of all caladiums, and a good deal grown for table and bracket plants, and in small pots for mixing with ferns and other plants in furnishing.

LACHENALIAS as basket plants. Mr. Hughes had wire baskets lined with moss

and filled inside with earth and studded all over with lachenalias, suspended from the roof in a greenhouse. Used in this way these little Cape of Good Hope bulbs grow admirable and bloom well, and their multitudinous duplicity every year always affords abundance and to spare. They are kept dry and rested during the summer months, started into growth in fall and had in perfection of bloom from midwinter till midspring.

HARDY PERENNIALS.—There is an increasing demand for these and a proportionate increase of supply. Landscape gardeners use them in quantity to plant about the front of shrubbery beds and belts, to furnish rockwork for effect in their natural landscapes and for the margins of ornamental ponds and streamlets. Hallock tells me he is going to import full sets of all good things as feverfews, pæonias; Woolson tells me he has stock enough to plant twenty-five acres, and has bought another farm adjoining his present nursery and is building more greenhouses; Manda writes me he has seven acres under hardy plants; Josiah Hooper told me his firm is going into them heavier than they used to; and at Mr. Meehan's I found that hardy perennials were quite a feature of the nurseries.

Grafting Azaleas.

In a former communication I gave you my views on growing azaleas from cuttings, but as many varieties are of slow growth on their own roots and of too branching a habit to form good plants of convenient height, grafting is resorted to and thereby we are enabled to give the weaker growers more vigor and in fact a better constitution in general. For a stock we may select any strong, robust grower, usually the old *Phœnicea* and *indica alba* are preferred, because they root easy and make a growth in a very short time.

The stock should be at least six inches high, in a thrifty condition and may be worked at any time in the year, either by side or top grafting. The side grafting should be done with a scion of half-ripened wood and the incision made into the stock at a place where the wood has not turned dark yet. Older scions and grafts into older wood will take a much longer time to unite and therefore should not be practiced. No wax is used, but the plants are placed in a close frame, shaded from the direct rays of the sun and in a few weeks will be united so that air may be admitted, and finally the glass taken off entirely. After that the stocks may be cut off above the graft.

The better way in my opinion, but to a beginner far more difficult, is the soft top grafting, which also may be performed anytime in the year, or whenever soft tips for scions are available. We do it here any time between January and June. Cut out the top of the stock, where it is still very soft, cleft it down about half an inch and insert a scion as young and tender as we can handle conveniently; the younger the better, for in this soft state it will unite with the callus forming on the cleft of the stock in a few days. The beginner may find it rather difficult at first to shave off both sides of so soft and small a scion, also the cleft into the top of the stock may not be a very easy task to perform for a new hand, but a little practice will bring everything straight and after a dozen or two have been worked, anyone will get used to it. The tying also may bother him, but practice will overcome this in the same way. I prefer to tie with bassmatting, for it will

generally decay soon after the graft has fairly taken and this saves the trouble of untying, which would be required if we used any other material for the purpose. As fast as we graft the stocks they are placed in a close sash frame on a bench in the propagating house and shaded a little. We lay them in a slanting position, rather close together, half burying the pots in the sand, but they may be set up erect if there is head room enough for the plants without touching the glass.

Anyone not familiar with the working of azaleas in soft tips may think that many grafts would wilt and die, but the close, moist atmosphere in the frame will prevent them from wilting and as the young and tender parts operated on will callus in a few days, the moisture rising from the sandbed under the little plants will keep them fresh, and in ten or twelve days a little air may be admitted and on examination we will find that the grafts have practically united. If the atmosphere in the frame was not constantly kept moist and close, the frame not being tight, then we may have poor success, but taking every precaution to avoid their getting dry, we are sure of 99 out of 100, even if we did not make a very good fit of bark to bark in some of the grafts. Azaleas are now almost universally so grafted in the large establishments of Belgium, but the Belgians were not the first to practice soft-wood grafting in azaleas, I believe.

The originator of Herzog Adolph and Herzogin Adelhaide von Nassau (our Duke and Duchess of Nassau of today), Bernhard Andre, A. Borsig, Deutsche Perle, etc., etc. Jos Mardner, who is still among the living, high in the eighties, in Germany, although for fifteen years or more retired from business, lays claim to that point. Guided by the observation in sidegrafting, that by using softer wood and working higher up into the softer part of the stock the grafts would take much less time in uniting, with a much smaller percentage of loss, therefore he worked higher up until he came to the tips and the softest wood. He kept his secret only a few years, for by selling young plants of his renowned seedlings any observing plantsman would soon find out that they were grafted in a different way. He also was a very shrewd business man and most of us could learn from him in that respect. He raised large numbers of azalea seedlings annually and when he had decided on half a dozen varieties, he would grow a large stock of them and then send circulars to all the leading establishments in Europe, stating his price for the set, shipment to begin not before he had secured 200 subscribers. As his seedlings had the highest reputation, the leading firms would order a number of sets and catalogue them in their next issue, before they could get even the plants generally, and invariably they had a large number of orders before they were able to get up a stock, consequently they had to buy more of him to satisfy their customers. In this manner the old gentleman made more out of his seedlings than he would in the ordinary way, by sending the plants as the orders come in, but he was always honorable, and to his credit we must say, that he never sent out a poor variety; even now, after so many years' improvement, if we look back at any of his varieties, we must admit that the poorest of them are still among the best.

Rochester, N. Y. J. B. KELLER.

Chrysanthemum Snowball.

Our illustration shows a single bloom of this excellent variety, cut from a plant

CHRYSANthemum SNOWBALL.

grown by Superintendent Kanst at the South Park greenhouses, Chicago. It certainly presents great attractions to the commercial grower as the plants are very robust, remarkably free from mildew and other disfigurements and the flowers are not only very freely produced, but are very desirable when cut. They are double to the very center and in shape almost a perfect ball about three inches in diameter. We believe that this variety will take place with the florist as a valuable white.

We understand that it was imported from Japan as No. 27 by Mr. M. A. Hunt, Terre Haute, Ind., and by him named Suowball. The name is certainly a very appropriate one, but as we note that Mr. W. K. Harris has given one of his seedlings the same name it would be wise for these gentlemen to correspond and decide which plant was first given the name, and rechristen the other one. Even then the name may by some be considered synonymous with Boule de Nieve as noted by Mr. Lonsdale in last issue. Truly that committee on nomenclature has abundance of work before it.

Chrysanthemum Elksborn.

In response to our comment on this variety in last issue Mr. Blanc sends us a specimen bloom which is certainly handsome and fully realizes the expectations raised by the engraving executed by him and which we published in Sept.

15 issue. The flower is of exactly the size of the illustration and the peculiarity which gave it its name is strongly marked, almost as much so as in the engraving.

Is It a Theory.

Mr. Herr, on page 154, speaks of exchanging cuttings as a necessary proceeding to keep stocks of roses, carnations, geraniums, etc. healthy. While it will do no harm to select good healthy cuttings of any of the above from your neighbors, or even renew old sorts by fresh importations from careful growers in Europe, we do not consider it at all important. First get the best stock you can find and from a reliable source, grown in a proper temperature and proper soil, neither pushed by a high temperature or stimulating manure. Select only the best for propagation and only from the strongest and healthiest plants. Persist in doing this and a weakling will be the exception and that too without going outside of one's own stock.

We have found by persisting in this line we have kept old sorts up to their original standard of health and vigor, but in many cases—as roses—when they were first introduced, being compelled to take small and sometimes weak plants or none, by continuing to only propagate from the best wood and not driving the plants by excessive heat and fertilizers, most sorts are quite sure to improve in

CHRYSANTHEMUM MRS. ALPHEUS HARDY

vigor. Very true the Perle will outgrow the Niphetos, but the latter with a little more time will invariably make strong healthy plants, and in the long run will well repay for the extra time required to bring it along in a moderate heat and soil not over stimulated. I. C. WOOD.

Fishkill, N. Y.

Rex Begonias as House Plants.

Mr. Fred Kanst has some splendid specimens of Rex begonias in the conservatories at South Park, Chicago. Many of them are three feet through and in handsome proportion. He has them placed on piers of bricks in the basin of a fountain, the top brick rising about half an inch above the surface of the water.

They thrive splendidly in this position and Mr. Kanst says they can be grown nearly as well in the dwelling by placing the pot on a brick in a pan of water, keeping the water about half an inch below the upper surface of the brick. In this way the plant absorbs the water as

it requires it and moisture is supplied to the under surface of the leaves, which is necessary to the best development of the plant. Florists would do well to advise buyers of Rex begonias to try Mr. Kanst's method.

Chrysanthemum Mrs. Alpheus Hardy.

The illustration shows a flower of this remarkable novelty which has attracted so much attention wherever shown. It has been so many times described in these columns that any further description is unnecessary. We may add that we are indebted to Messrs. Pitcher & Manda, Short Hills, N. J.—the owners of the stock—for the use of the cut.

London Notes.

During the past week the public attention has been drawn to the chrysanthemums. On Wednesday and Thursday November 7 and 8, the National Chrysanthemum Society held its grand show

at the Royal Aquarium, Westminster. The show was well attended and a very good display of blooms and plants were made by many of the best growers. We do not think the blooms were as large and fully expanded as in former years, but suppose this must be attributed to the wet cold summer we have had.

On November 9 and 10 the annual chrysanthemum show was held at the Crystal Palace. The leading growers also took part in this, but many of the blooms looked as though they had done duty at the Aquarium show. The first prize for 18 Japanese varieties, distinct colors, was won by Mr. W. Packman, of Fooks Cray, Kent. This was a grand show, the blooms being very large and well grown. Mr. Packman also received three certificates as follows: One for a new white chrysanthemum called "Avalanche," which was a splendid bloom, some 10 inches in diameter, pure white and very thick; also a certificate for a bloom called "Marsa," a deep rose color with silver reverse, which looked to us like a sport from Mons. Freeman; the

third certificate was for a creamy white bloom with corkscrew petals called "Florence Percy." Mr. T. Skinner, gardener at Sutton Park, also won a first prize for 12 distinct varieties of Japanese chrysanthemums. One of the best in his exhibit was that of a bloom of Edwin Molyneux; in fact he had the finest flower of this variety in the show. Mr. J. Doughty obtained a certificate for his new chrysanthemum "Violet Tomlin." This is a sport of the chrysanthemum "Princess of Wales."

The growing plants in bloom shown in groups were very fine. That of Messrs. Davis & Jones, of Camberwell was superb. These plants were arranged in banks of 100 feet square. Messrs. Davis & Jones won the gold medal at the Aquarium on the 7th and 8th. This is the highest prize ever offered by the National Chrysanthemum Society.

Mrs. Smouth, of Hastings, had a dinner table decorated with dried sea weed which was very pretty. This article is coming into use here for yacht decoration. These seaweeds, Sertularias and Corallines, are prepared in such a way that they retain all the characteristics of the zoophytes, from which they are made; they have the beauty of natural flowers and are practically everlasting. As we stated they are used a good deal for yacht decoration and also for drawing rooms, table and electric light decoration. In the latter they can be placed over the shade or directly on the lamp and produce a very pretty and novel effect.

The West End florists report that business is looking up; many of the occupants of the large houses have returned from the continent or the country, and cut flowers and plants for decoration are again in demand. Orchids will again be largely used this winter for table decorations and basket work. This is the worst season of the year for orchids here, but the supply of late autumn flowering orchids has been very good.

November 10.

Cyrtanthus McKenii.

Cyrtanthi may be described as miniature amaryllis; they have lovely drooping crimson, white and yellow flowers and are very well adapted for greenhouse cultivation. We have several species in Natal: *breviflorus*, yellow; *angustifolius*, crimson; *obliquis*, orange, green, etc. *C. McKenii* I consider the most useful and only wants to be known for growers to use it largely, blooming as it does through midwinter. The stem is about a foot long and bears six to eight snow white tubular flowers about two and a half inches long and one-half inch across tip, hanging in clusters, with a delicate jonquil like perfume. Unlike the above named cyrtanthi *C. McKenii* increases rapidly by offsets, like a tuberose. The blooms last for a week after cutting and are freely produced when white flowers are most needed. With rather a moist soil and temperature 60° to 70° Fah. I find it does well in winter. In summer the bulbs should not be allowed to dry off too much, as naturally they do not quite lose their long narrow leaves. Ordinary light rich loam will be found the best soil for its successful culture. It has been largely propagated and bulbs can now be had at a very moderate figure.

Freesia refracta alba is now—August, our spring—just coming into bloom. Few flowers I know have a more delicious perfume. The color, as is well known, is snow white with sometimes a pale

lemon yellow throat. Several nurserymen hold large stocks and the price within the last year has come down 50 per cent.

R. W. ADLAM.

Maritzburg, Natal, S. Africa.

New Zonal Pelargoniums.

The illustration serves to give an idea of the march of improvement that continues to be made in this old-fashioned, and, at the same time, most popular class of plants. Those who have seen the under-mentioned varieties, or some of them, at recent exhibitions, will have no doubt as to the correctness of the representations, both with regard to the size, regularity, and general disposition of the petals; but, at the same time, they give no idea of the substance, nor the delicate, yet charming and brilliant hues of all shades possessed by the flowers themselves, which have been wonderfully improved in recent

PELARGONIUM PIP SHOWING SIZE A FEW YEARS AGO.

years, thanks in a great measure to the encouragement given to raisers by such firms as Messrs. H. Cannell & Sons.

On the upper left-hand corner of the illustration, the first figure represents Lady Frances Russell, having soft rose-colored flowers, with a white eye, and dwarf, short-jointed stems. The second to the right is Lady Roseberry, with petals of the richest salmon, and white at the base. Countess of Derby follows with suffused salmon flowers, deepening to a fiery tint in the center, and white at the margin. The fourth figure represents Brilliant, one of the richest and finest scarlet flowers existing in this class of plants. Lily, which follows, produces the largest flowers of any white variety, but is generally faintly tinted with pink at the base of the petals. Succeeding this is H. Cannell, Jr., which produces large flowers of perfect form in huge trusses; the color may be described as a deep crimson, heavily suffused with purple, and white at the very base only. No. 7 on the lower left-hand side represents the variety, Rev. H. Harries, with large, soft rosy red flowers, produced in bold trusses of great size. To the right of this is a pink variety, shaded with purple, and named Mrs. David Saunders. It flowers freely and is dwarf in habit, carrying the flower-stems well above the foliage. The small figure above is that of one of the zonal pelargoniums so popular a few years ago, and which, by comparison, serves to show the advance that has been made with the modern varieties, such as those above mentioned. Even this type is a vast improvement upon the original wild species.—*Gardening World*.

A National Flower.

While it is certainly gratifying to note the patriotism evoked by the few notes on this question, the flood of communications we have recently received on the subject necessitates doubling the size of the paper or declining to give further space to them. As we can't afford to do the former we are compelled to accept the alternative. Hereafter please mail your ideas on this matter to the committee of the S. A. F., who are to report a flower for the consideration of the society at the Buffalo meeting.

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

IV.

You look worried this morning, what's the matter? By the way, what a superb display of chrysanthemums. My favorite flower. What's that your muttering? Would have been finer if you had not been cheated? Calm yourself and let me hear how it all happened. You say, some one told you that Spriggins, your business rival, had secured a thousand plants of beautiful varieties, not only in white and yellow, but in several rare shades of pink and also in deep red, a very rare color. You at once offered to take one half the invoice off his hands, offering a low price but a cash one. He accepts and sends you all the white and yellow ones. You've not been cheated. Really there was no sale at all. There was only a bargain for a sale, a very different thing. What you should have done was to return the 500 plants at once and say that you would call and specify which colors you wanted. Had he refused to accede to this that would have been the end of it.

Bear in mind that there can be no sale unless first of all, the property to be sold shall have been so accurately described as to render it certain that purchaser and seller are thinking of the same property. In this case they were not. You must always distinguish between a sale and an agreement for a sale. To constitute a sale there must be: First, ownership; next, a meeting of both minds as to the identity of the property; then unconditional offer and unconditional acceptance. That instant the sale is complete, no matter where the goods may be, no matter how they may increase in value or how worthless they may become.

You will perceive that the reason why the law insists upon offer and acceptance is that otherwise a wide door to fraud would be opened. In fact a business man would need be pretty wide awake or he would find himself a buyer against his own will. I mean enterprising dealers would take the risk of your returning an invoice of goods and then try to hold you on the plea that you did not repudiate and hence approved the sale, as they would call it. A man can't be made a buyer in spite of himself.

Let me say a word here as to contracts for future sales upon the happening of some event. You may say to Spriggins: If I get \$100 for the contents of my cold frames on the first of the month I'll buy five dozen fuchsias, six dozen azaleas and one dozen camellias for such and such a price per dozen. Spriggins accepts. The general idea among business men is, that should you on the first day of the month tender the exact sum due for the merchandise specified it would be a sale and would give you such absolute rights in the property that you could seize it by

NEW ZONAL PELARGONIUMS

legal process. Nothing of the kind. You confound two things. It would be simply a breach of a contract for a sale and not of a sale itself. You might, if you wished, make a tender of the sum agreed upon and then sue for damages.

Another thing you must bear in mind. You must not mix up exchanges or "barter" and sales proper. A sale becomes absolute the instant the offer is made and accepted, but that instant too there must either be cash payment or specific agreement as to credit. Not so with an exchange of property. An offer to exchange is not binding until contract signed or until the delivery of the property. The two articles must change places and the new owners must come into actual possession of them.

No, you are wrong. Spriggins committed no fraud upon you. Quite right, any sale brought about by fraud may be and should be at once rescinded. A slight delay would do no harm, but my advice is, in such case, don't let a leaflet grow on the plants until you have returned them with a plain statement of the grounds for so doing. Had Spriggins shipped you five hundred plants of his

own growing there would have been a fraud. That's a good point. I'll answer it.

You say: Suppose you are induced by fraudulent representations to make a sale of merchandise. You do so and give the buyer the usual thirty days credit. Now before the credit has half elapsed you learn of the fraud practiced upon you. Would it be right, you ask, to bring suit at once for the amount of the invoice? No, it would be fatal. You would simply confirm the sale and rob yourself of the right to seize the goods if possible, and arrest the buyer for fraud.

You ask: How is it when merchandise is sold by sample? The general rule is that you warrant the merchandise to conform to sample. But mind you, no more! You don't, as a rule, warrant that the sample is anything more than it seems to be. The buyer buys with his eyes open. The only question is: Does the article conform to sample. I would say to you: Be careful how you give warranties. Your business is a peculiar one. Varieties in colors, tints, shades, shapes of leaves and sizes of blossoms are so endless that the same pair of eyes may readily see differently every time they

look! Hence it behooves you to be careful how you give warranties as to these delicate variations.

You may have heard of the old Latin maxim which is always the rule when a purchaser buys with his eyes open. I refer to *caveat emptor*. "Let the buyer be on his guard." But even this rule doesn't apply to sales accomplished through fraud.

If you affirm that a rare species of chrysanthemum is your own importation and not to be found at any other dealer's you will be bound by your declaration; but you can't be held for a "mere opinion." That is no warranty.

Oh, don't mention it. I knew you would feel better after a quiet talk. The blood has left your brain and gone back to its right channel. Thank you. I'll take a glass with pleasure. I'm very fond of home made wine.

UNCLE BLACKSTONE.

THE AMERICAN GARDEN will raise its subscription price to \$2 a year on January 1. Our club rate of \$1.85 for the FLORIST and AM. GARDEN together for a year holds good till Jan. 1, however.

Rose Mme. Andre Duron.

Respecting the rose which has had some notice in your columns pro and con, I beg herewith to quote from the *London Garden* again (Nov. 10), which is from the pen of Canon Girdlestone, who, by the bye, has scored our American Beauty so unmercifully from time to time.

Mme. Andre Duron (Bonnaire). This rose has much the character of the old Bourbon Sir Joseph Paxton in foliage, habit and type of indorcescence; the flowers are said to sometimes attain to the size of those of Paul Neron, but it is to be feared that its common color will be against it.

With me it does not promise very well. The half dozen plants which I have on trial are anything but satisfactory. It may be that the treatment it is receiving does not suit it. Though when anything succeeds well with other florists and does not do so with me I usually blame the soil. In the same house where the variety in question is a failure, Perles, Sunsets, The Bride, Mme. Cusin, Niphetos and La France are doing well, in comparison. Fully realizing that we should not be too hasty in our condemnation, yet I must record the fact that up to date I have not cut one marketable bud from the six plants on trial. It is not desirable in either form, size or color.

Philadelphia. EDWIN LONSDALE.

Seedling From Paul Neron.

We have received from Mr. Isaac A. Pool, Escanaba, Mich., a photograph of a new rose which he states is a seedling from Paul Neron, but superior to that variety in vigor of growth, size and color of flower. He also states that the flowers are much more persistent and the plants freer in blooming than its parent. It is a chance cross and its male parent is unknown.

NEW ROSE FRANCES CLEVELAND.—This is reported to be a sport from Souvenir d'un Ami, originating with W. H. Ryan, Chatham, N. J. It is described as a beautiful pink in color, plant a strong grower and very prolific.

Holiday Prices.

Baltimore florists are, generally speaking, highly pleased with the prospects for "right smart" of trade during the coming season, although one florist "feels confident" that it won't be as good a season as last, and another assured me that the bottom had most completely fallen out of business and the outlook was exceedingly poor. Be that as it may, it is certain that we are all—above gentlemen included—making ample preparations for a brisk season.

Apropos of all this I would like to say a word regarding the retail prices that frequently prevail during the holidays, particularly in the cities. I am satisfied that many of us do material injury to our trade by too high prices. A love for plants and flowers is common to all sorts and conditions of men, yet at certain times it is well nigh impossible for people of even moderate means to do more than covet their neighbor's flowers, inasmuch as flowers, for the time being at least, are expensive luxuries in which only those possessing plethora pocket-books can hope to indulge. We ourselves are perfectly cognizant of this latter fact and the knowledge inclines some of us to be rather independent in our bearing towards humbler patrons whose quarters and half dollars would be thankfully received at other times. I have no reference whatever to the cranks who want twenty-five cents worth of

flowers at Christmas, to consist of "a few lilies of the valley, three or four American Beauty roses and some smilax." On the contrary, I have no words to waste on such people, I like to sit down on them, and I enjoy seeing them sat upon, but there are hundreds and hundreds among the masses in every city who would be delighted to brighten their homes on Christmas morning—if at no other time in the whole year—with a few of even the commonest flowers, were it possible to obtain them at a reasonable cost.

I am not to be understood as suggesting that we ought to sell flowers at the same prices in December as in July; we all anticipate increase of business and better prices during the holidays, and in fact at any time when supplies are sorely taxed to meet an unusual demand. A legitimate advance in prices is nothing more than business, but what I do mean to say is this: that some of us are altogether too avaricious. We are not content with moderate profits, and in our anxiety to reap all possible gain from a business freshet we pile on prices to such an extent that we virtually confine our patrons to a certain class, excluding many others whose mites, in the aggregate, would considerably increase our profits. All is fish that comes to the net, and whether a customer be rich or poor, whatever the extent of his order, we should do our utmost to give him satisfaction. I believe in every florist deriving a fair, just profit from the sale of his goods, and I am satisfied that if in many things we should sell at closer figures, thus placing plants and flowers within the reach of a greater number we would be able to report a more satisfactory holiday trade.

A. W. M.
Baltimore.

[Since values were first recognized they have been based upon supply and demand. If the article to be valued was plentiful and easily obtained the valuation placed upon it was small, while if the supply was limited and many desired the same the value was placed proportionately high. This has come to be known as the law of supply and demand and has been the base of all values since man first recognized their necessity. Another factor in determining prices is the cost of production. Common sense teaches all that the selling price must exceed the cost of production. The prices of flowers at any season of the year must be governed by this same law of supply and demand in conjunction with cost of production. If the supply is large and demand slow prices must consequently be low, while if the supply be short and the demand brisk prices must be higher. At the holidays the supply is short and the demand generally the best of any time of the year, it also costs more to produce flowers at that time, they are consequently worth more and an article should bring what it is worth. If prices were not advanced to a profitable figure at the holidays the supply would not be as large as it now is, as there would not then be a sufficient incentive to surmount the numerous difficulties and develop the necessary skill to produce the flowers at that time. As to avariciousness there can be no sentimentality in business matters. Sometimes business men give away thousands of dollars worth of goods—not from pure love of humanity by considerable, but because they expect to receive it back with heavy interest through business channels. This is merely a question of policy. Will it be to the best interests of

the florist to sell his goods at less than cost during one season that he may reap an increased benefit during the balance of the year? We are inclined to think that any interference with the accepted order of things will be futile and that the highest price at which *all* the supply can be sold is the correct one for the florist to charge. But if the stock can not be sold out clean at the prices asked a failure to at once make a reduction would certainly be poor policy. Flowers are not the only luxury which is within the reach of the rich only at certain seasons. Strawberries at \$1 a box in February will not be found on the poor man's table, but this does not limit the consumption of the same berries in June at 10 cents a box.—ED.]

News Notes.

LAKE FOREST, ILL.—Hild Bros. are building another rose house.

NEWPORT, R. I.—Florist Brandt made an exhibition of chrysanthemums which brought much praise from the local press.

INDIANAPOLIS, IND.—The twenty-eighth annual meeting of the Indiana Hort. Society was held at the State House December 4, 5 and 6.

MILWAUKEE.—It is rumored that Mr. Peters, foreman at Forest Home cemetery, is about to build and conduct some greenhouses for himself.

UTICA, N. Y.—Chas. F. Seitzer sustained a considerable damage to his stock through sewer gas coming through the ground into his greenhouses.

DENVER, COLO.—C. R. Gallup & Co. have built two new houses 100 x 12 each. Mr. and Mrs. Gallup have returned from a five months European trip.

BELLEVIEW, ILL.—E. W. Guy has added two new houses, 100 x 16 and 100 x 11 respectively. A. G. Fehr Las also added two, one 60 x 18 and the other 60 x 12.

VICKSBURG, MISS.—Mrs. E. D. Wright has remodeled a rose house 80 x 20. Noah Vandenburg claims to have cleared \$1,200 from his three-quarter acre garden patch this year.

DALTON, MASS.—F. B. B. Sears who has heretofore grown vegetables only has just completed a new greenhouse and is preparing to grow plants and flowers. He will use steam for heating.

WASHINGTON, D. C.—A portion of the land on which the Botanical Gardens are located is involved in a law suit. A suit in ejectment has been brought against Supt. Smith as agent of the United States by an heir of a former owner.

SALINA, KANS.—The wife of Mr. John C. Nolan, head of the Salina Floral Co., died on the 4th inst. of heart disease. Mr. Nolan was formerly an eastern man and has many friends in both the east and west who will be grieved to hear of his affliction.

SCRANTON, PA.—Florists G. R. Clark & Co. gave a very successful chrysanthemum show in the Armory building commencing Nov. 7. About 1,500 plants were exhibited. Visitors stated that it compared favorably with the shows in the larger cities.

CHATHAM, N. Y.—A severe snowstorm with high wind the latter part of last month has made this a very trying fall for the cut flower grower. So much dark

weather has made it very difficult to get any flowers out. English violets are doing the best of anything.

SANDUSKY, O.—Florist Wm. Dilger gave a chrysanthemum show at Fisher's hall beginning November 22, which was very well attended and was a successful exhibition. On the opening night Mr. Dilger read a paper on the chrysanthemum to an audience of nearly 400.

MILWAUKEE.—It is reported that G. W. Ringrose will retire from the florist business next spring. It is doubtful if ever before has there been so many orders for Thanksgiving day refused as this year. The supply was a trifle short and the demand much larger. Roses were in special demand.

SAN FRANCISCO.—State Inspector of Fruit Pests G. W. Klee has prohibited the receipt of cut flowers from San Mateo county on the ground that many shipments are infested with the cottony cushion scale which is thereby transmitted to and established in districts hitherto free from its ravages.

DETROIT, MICH.—Arrangements are being made for a flower show in the spring to be given by the local florists under the auspices of the daily *Journal* and local charitable organizations; the latter to receive any surplus after expenses are paid, the *Journal* guaranteeing that there shall be no deficiency.

LITTLE ROCK, ARK.—Joseph Vestal has built six new houses this season, one 125x20, one 168x22, three 125x12, and one 78x12. Also a packing and plant cellar 60x18, and an elevated iron water tank holding 84,000 gallons. Tipton & Hurst have added two houses, one 100x18 and the other 100x6. M. W. Heron's new houses are two 56x22 and one 25x12.

PORTLAND, OREGON.—A bill prepared by the State Horticultural Association to create a State Board of Horticulture to consist of six members will be introduced in the next legislature. The board is to look after the fruit interests of the state with power to enforce certain restrictions, appoint an "inspector of fruit pests, etc." The passage of the bill would undoubtedly be of great benefit to horticulturists generally throughout the state. The *Oregonian* of Nov. 15 gives the bill in full.

NEW ORLEANS.—Twenty members of the New Orleans Hort. Society attended the funeral of Edward F. Nelson, late superintendent of Audubon Park and one of the active members of the society. Among the floral designs sent by the members of the society was a floral banner, the emblem of the society, which was very handsomely made. Mr. Nelson was formerly superintendent in the horticultural department at the World's Exposition. His age was 37 years. Chas. Schultz has been appointed superintendent of Metairie Cemetery, considered to be the largest cemetery in the south. Chas. Eble has removed from 4 Camp street to 165 Canal street where he has a handsomely fitted store.

COLUMBUS, O.—The annual meeting of the Columbus Horticultural Society was held on the afternoon of the 1st inst. Valuable reports were received from the standing committees and officers. The society has not a large membership, but at the meetings there are many interesting papers and discussions. The chief fault of the society is its lack of the social feature, so essential to the best development of a first class horticultural

society. The following officers were elected for the ensuing year: President, O. W. Aldrich; Vice-President, Prof. Wm. R. Lazenby; Secretary, W. S. Devol; Treasurer, Geo. W. Sinks. Executive committee, W. J. Green, Mrs. N. E. Lovejoy, Clarence M. Weed. Chairman of standing committees—on botany, A. D. Selby; entomology, Clarence M. Weed; meteorology, Moses Craig; library, J. J. Janney; fruits, W. J. Green; plants and flowers, Mrs. N. E. Lovejoy; vegetables, R. J. Tussing. The next meeting will occur Dec. 29—subject of paper "Genesis of the Vegetable Garden," by J. J. Janney.

Philadelphia.

The supper given by the Florists' Club during the recent chrysanthemum show was a most enjoyable affair, and was participated in by many visiting florists who were present at the exhibition, as well as a large number of members of the club. Among the guests were Messrs. John N. May, Summit, N. J., President S. A. F.; John H. Taylor, Bay Side, N. Y.; Chas. Anderson, Flushing, N. Y.; W. S. Allen, A. D. Cowan, D. A. Munro, of *Garden and Forest*, and Wm. Elliott, New York city; F. R. Pierson, Tarrytown, N. Y.; Alex. Murdoch, Pittsburg, Pa.; John Thorpe, Pearl River, N. Y.; Dan'l B. Long and Wm. Scott, Buffalo, N. Y.; and several others whose names I can not now recall. Vice President W. J. Palmer, of Buffalo, did not make his appearance until the following day. L.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advts. not admitted under this head.

Winter Floral Styles.

Fashion dictates that for the trimming of evening gowns for all occasions, excepting weddings, foliage shall be used. The reason is probably that green, with its numerous shadings into olive, and almost into yellow, is the most stylish color for costumes of all sorts. White, in light and rich fabrics, is the vogue for full dress entertainments, if worn by young people, and even the dowagers dress in white satin brocades and velvets. Low necked and short sleeve, or sleeveless robes are trimmed with vines or grasses in the following manner: They are attached to a green ribbon, which is fastened to the left shoulder and are trimmed off narrower as they cross the bodice; the sash extends around the skirt, the grasses widening at the side where they are at their greatest depth. The sash is then gracefully draped across the back and up to the left side where it is finished with a cluster of grass. Knots of grass fall from each shoulder down the arm. This is a lovely and easily applied trimming. A few frosted grasses are sometimes introduced among the fresh ones. Bridal gowns made in the Directoire style have the corselet entirely massed with double white *bouvardia* with a cluster of orange blossoms at the breast. The corselet is trimmed with flowers when it appears at receptions; it is a most elegant garniture and not at all perplexing to adjust. Floral garniture on gowns would grow in popularity much faster were it not discouraged more or less by florists who have not the taste or deft fingers to apply it. This is the style of ornamentation, however, that brings in a round profit. There is a demand for it and many determined to have it employ women out of the profession who make a good living in this city by trimming gowns with natural flowers, and becomingly and gracefully arranging blossoms in the hair and on the dress of those going to entertainments.

Fashionable dinners are now in full blast and table novelties in floral designs are every day appearing. A great deal of glass for flower holders is favorite. Glass baskets for favors, glass gondolas for holding roses, and glass swans for filling with lilies are much used. Center banks of living palms, ferns and mosses are made very large, in fact, so large as to entirely cover the table to the line of the covers. The foliage must, of course, be selected to have the arrangement choice. Sometimes just a line of foliage is placed at the top of the cover; *smilax* or *asparagus* is used. In this line a corsage bunch is laid. A colored candle in a glass candlestick finishes each end of the line. The flowers in the center piece are the color of those in the corsage and the candles are also of the same tint. For dinners in a large hall a circular

table within a circle made by a large table is the most elegant style of the season. The smaller circle, where the representative guests are to be seated is elaborately embellished with pink and red roses; the outer table has a wide band in its center filling to the covers, of *asparagus*, *mignonette* and *cypripediums*.

Green bouquets made up with the loose centers are carried when the gowns worn are trimmed with vines or grasses. *Cypripediums* and ferns form the outer band and *mignonette* and *asparagus* the center fringing.

New York. FANNIE A. BENSON.

New York.

C. L. Allen has started for Europe.

Siebrecht & Wadley's show at the Eden Musee was financially damaged by the chrysanthemum exhibition which preceded it. Too many shows within a fortnight.

John Thorpe evidently won the hearts of Andrew Carnegie and wife at the chrysanthemum exhibition, the same as he always captures the good graces of those who appreciate his work. Mrs. Carnegie invited him to luncheon at the close of the show.

Mr. Henning, who was so long with Klunder, is now with Lee, of Union Square.

Mrs. Irwin has opened a very pretty floral shop on Waverly Place near Sixth avenue.

Silver and gold filigree bouquet holders are again coming in fashion.

Rose and bulb sales at auction during the fall and so far this month have been unprecedentedly large.

Isaac Young, Esq., is seriously sick.

Henry Siebrecht will make a trip to Trinidad immediately after the holidays.

Samuel Henshaw, of Staten Island, who was for twenty years gardener to Mrs. John Green, has lost his position.

Alex McConnell decorated the casket of a prominent member of the stock board who died this week, very elegantly. There was a band of roses ten inches wide surrounding it, and from that hung a deep fringe of foliage. Over \$100 was paid for this choice arrangement.

Boston.

Trade in Boston has been lively during the past two weeks, but as is generally the case at such times good flowers have been difficult to obtain in any quantity. If the wholesale dealers could have supplied the demand for roses, carnations and violets, they would have good reason to be very happy.

The weather has been as unpropitious as possible for the production of first quality flowers. Should it continue so till Christmas the prospects are for a very limited supply. There are still a few

chrysanthemums left, but not in sufficient quantity to influence prices of, or demand for other kinds of cut flowers.

All signs point to a largely increased demand this season for best varieties of flowering plants, such as cyclamens, primulas, etc. There is also a noticeable revival of the demand for palms and other decorative plants, and this class of goods commands better prices than it has for some years.

Bernard Minton, a well known rose grower of Dorchester, died of consumption on Saturday Dec. 1, 1888. He has been in failing health for some time and his friends had given up all hope of his recovery. His brother, Peter Minton, was carried off by the same disease a few years ago.

The firm of Minton Bros. was well and favorably known, and in the days when Boston was the principal source of supply for the eastern rose market, the *Bon Silenes* and *Yellow Teas* grown at their place had a great reputation and commanded at all times the very highest prices.

"Barney" Minton had many sincere friends, for he was a generous, whole-souled man, and when a brother florist was in distress Barney could always be counted on as a willing and liberal contributor to any measure of relief or charity. His funeral was attended by many representatives of the florist trade.

W. J. S.

Chicago.

M. Klok has opened a floral store at 465 North Clark street.

It is reported that a certain fashionable florist not far from the south side of Washington street filled a ratification order with an alleged design of the national flag. The field of the same which was made in the upper right-hand corner was of white with blue stars dotted in it. The emblem was returned and changed later—but no one knows why the stars were blue that day.

Flowers have been remarkably scarce for the last few weeks. It has been years since such a scarcity existed at this season, and the quality of that to be obtained is not of the best. Prices consequently rule high and every body is grumbling.

Catalogues Received.

Reasoner Bros., Manatee, Fla., plants and nursery stock; F. C. Heineman, Erfurt, Germany, flower seed novelties; Roustan Servan, St. Remy-de-Provence, France, seeds; Carbone & Monti, San Francisco, Cal., plants, seeds and bulbs; R. G. Nicholson, Chestertown, Md., fruit trees, vines, etc.; F. Dubreuil, Monplaisir, Lyon, France, roses; Fred Roemer, Quedlinburgh, Germany, flower seeds.

FROM THE United States Nurseries,
Short Hills, N. J., we have received their
catalogue of cypripediums, and it is cer-
tainly a credit to the establishment. On
the outside cover page appear exceeding-
ly well executed engravings of five kinds
of cypripediums and the list of varieties is
not only very complete but the habitat
of the species or names of its parents
appear opposite each name, which makes
it very convenient for reference to any
one interested in these plants. Typo-
graphically this catalogue is a model and
it is a pleasure to give credit for such
excellent work.

The Seed Trade.

SEED TRADE ASSOCIATION.—Geo. S. Haskell, Rockford, Ill., president; Albert M. McCullough, Cincinnati, secretary.

E. J. BOWEN reports a good seed trade at his Portland, Oregon, branch.

NEW ORLEANS.—Joaquin Rapp, seedsman at 10 and 12 Phillip street, died last week, aged 72 years.

JEROME B. RICE & Co., of Cambridge, N. Y., have purchased the business of the Shaker Seed Co., at Mt. Lebanon, N. Y., who retire.

W. W. BARNARD & Co. succeed to the garden seed and implement business of Hiram Sibley & Co. at 6 and 8 North Clark street, Chicago.

MRS. BELLE REID, widow of Jas Reid, was married Dec. 2 to Col. Robert M. Floyd, of Highland Park, Ill., but now a resident of Philadelphia.

A. D. COWAN & Co., New York, have been appointed agents for distributing the Lorillard tomato, raised by John G. Gardner, Jobstown, N. J., and certificated by the S. A. F. at the New York meeting.

MOREHOUSE & ANNIS is the title of a new seed firm at Rochester, N. Y., composed of Mr. W. A. R. Morehouse, formerly manager for Hiram Sibley & Co., and Mr. T. E. Annis, a seed grower at Livonia Station, N. Y.

A Florists' Club for Buffalo.

A meeting of prominent florists of this vicinity was held on evening of Nov. 23, at Long's store, and preliminaries arranged for forming "The Buffalo Florists' Club," the following officers being elected to serve until March 1 next: President, W. J. Palmer; Vice-President, J. H. Rebstock; Secretary, Dan'l B. Long; Treasurer, R. F. Lawrence.

A second meeting was held at same place on evening of Nov. 30, the sections of a constitution and by-laws approved, and a membership to the number of twenty-two enrolled on the secretary's books. A third meeting to be held Dec. 7 will no doubt advance arrangements toward securing a permanent meeting place. Active interest is manifested by those taking part, and assurances of a successful club are not wanting.

S. A. F. Standard Pots.

At the last convention of the Society of American Florists a pot of certain shape and sizes was adopted by the society as a standard. This action was followed by a request to all potters in the country to manufacture this particular style and sizes so that where a collection of pots from various manufacturers, accumulated in one florist's establishment the pots would set together uniformly on the bench, and nest together perfectly, thus avoiding considerable breakage which almost invariably occurs where a collection of slightly varying sizes are nested together.

The Whilldin Pottery Co. of Philadelphia, are first to the front with pots manufactured according to the models agreed upon by the society. A circular received from them contains engravings showing the exact shape and sizes of the standard pot and should in consequence be of interest to all.

The sizes adopted are 2-inch, 2½-inch, 2½-inch, 3-inch, 3½-inch, 4-inch and

from that on in even inches, all *inside* measurements. The pot has a rather wide rim at the top to give strength, is provided with a projection which keeps the bottom a small fraction of an inch from the bench, and the drainage hole is a trifle larger than usual.

When all potters shall have conformed to this standard a considerable saving will be made to the trade in breakage, and when you order a 3-inch pot you will receive one which measures 3 inches inside, not 2¾ inches, 3½ inches or some other size which will not nest with any other manufacturers' so called 3-inch pots.

We trust that other potters will not be slow in falling into line. We shall be pleased to announce the fact when they do so.

Daily Record of Work Done at the Lincoln Park Greenhouses, Chicago, 1887.

December 16—Tem. 27, 31, 30. WNW. to SW. Finished putting in cuttings of Achyranthes Lindenii (about 6,000). Propagated Achyranthes metallica.

17—Tem. 27, 31, 39. SW. to NW. Continued propagating Achyranthes metallica (total of 3,000). Propagated another lot of Begonia Saundersonii. Cleaned plants.

18—Tem. 29, 38, 37. NW. to SW. Sunday.

19—Tem. 37, 43, 41. S. to SW. Commenced potting rooted cuttings of Thymus argentea, four cuttings in a 2½-inch pot. Cleaned and washed plants in conservatory. Cleaned cannas.

20—Tem. 36, 41, 40. SE. to ENE. Continued potting cuttings of thymus. Sowed in boxes seed of pansies, Cineraria maritima, Verbena hybrida, bellis, vincas and cyclamen.

21—Tem. 10, 9, 7. W. to WSW. Commenced potting rooted cuttings of Mt. of Snow geranium. Cleaned cannas and other plants.

22—Tem. 9, 15, 12. W. to SW. Continued potting rooted cuttings of Mt. of Snow geranium. Laid an additional covering of manure on tulip beds. Cleaned caladiums.

23—Tem. 22, 28, 26. S. to W. Potted rooted cuttings of begonias and Panicum variegatum. Repotted pilogynes into 3 inch pots.

24—Tem. 7, 19, 20. W. Repotted Lophospermum scandens into 3-inch pots.

25—Tem. 20, 28, 24. SW. Sunday.

26—Tem. 28, 28, 24. SW. Celebrated Christmas day.

27—Tem. 30, 33, 35. S. to SE. Propagated second lot of Mt. of Snow geraniums. Commenced potting rooted cuttings of Achyranthes Lindenii—two in a 2½-inch pot.

28—Tem. 1, 3, 3 below zero. NW. Same as yesterday and cleaned plants in general.

29—Tem. below zero 4, 12, 5. NW. Finished propagating Mt. of Snow geraniums and commenced taking cuttings of fuchsias, abutilons and salvias. Continued potting rooted cuttings of Achyranthes Lindenii.

30—Tem. 2, 22, 21. S. to SE. Propagated another lot of Alternanthera aurea nana. Continued potting rooted cuttings of Achyranthes Lindenii and metallica.

31—Tem. 30, 38, 41. SE. to S. Same as yesterday.

PORTLAND, ME.—An enterprising firm here has been buying immense quantities of wild rose leaves, which they use in confectionery.

TO MAKE A HIT,

THE AMERICAN GARDEN

IS NOT an agricultural journal in the sense of reaching the mass of farmers, or dealing with ordinary farm questions.

THE AMERICAN GARDEN

IS an agricultural magazine in the sense that HORTICULTURE IS THE REFINEMENT OF AGRICULTURE, and that the larger portion of the people representing progress, enterprise, wealth and refinement in both city and country in all parts of the land are interested in the topics of which it treats.

IT REACHES THE CREAM OF BUYERS.

Country Gentlemen,
Villa Residents,
Gardeners,
Fruit Growers,
Florists,
Market Gardeners,
Nurserymen,
Landscape Gardeners,
Amateur Gardeners,
Progressive Farmers,
Conservatory Owners,
Orchid Specialists,
Rose Growers,
Orange Growers,
Vineyardists,
Greenhouse-men,
Lady Amateurs,
Progressive Men and Women
in all states and many lands.

3 feet by 4. Special prices for LARGER quantities.

John Gardiner & Co., 21 N. Thirteenth St., Philadelphia, Penna.

GROW VERBENA PLANTS FROM SEED.

A number of leading florists prefer decidedly to grow Verbenas from seed. Seedling plants produce healthier growth and are more easily handled than from cuttings. Our New Crop of

MAMMOTH VERBENA SEED

is now ready, grown from stock seed we saved from named plants pro-
cured in 1886 WHICH WE GUARANTEE TRUE. The flowers are
of mammoth size and of brilliant colors of all shades, from brilliant scar-
let to pure white, showing large contrasting colored eyes.

Choice Mixed Seed . . . trade pkt. 50c.; ¼ cz. \$1.25; ½ cz. \$2; 1 oz. \$4
Smilax Seed, new crop. trade pkt. 50c.; 1 oz. \$1.50
Centaurea Gymnocarpa. 1000 seeds 60c.
Centaurea Candidissima 1000 seeds 75c.
Mignonette Machel, the best for pots trade pkt. 30c.; 1 oz. \$1

SEASONABLE FLOWER SEED LIST of New Crops now ready
and mailed to all applicants in the trade.

HENRY A. DREER,
SEEDSMAN AND FLORIST, PHILADELPHIA.

Moving Decorative Plants in Frosty Weather.

If your wagon has not a tight canvas cover make a strong lath frame-work with the rear end made to hang on hinges like a door, and leave an eighteen inch space in front for the seat. Cover it with canvas or strong cotton cloth which has been repeatedly dipped into boiled linseed oil until it is well saturated and coated with the oil, making it as airtight as possible.

From the same cloth make round bags of different sizes and lengths to suit the plants you usually use for decorating, sew flexible canes to the inside in such a way as to keep the bag inflated like a balloon and arrange a hem at the bottom with a cord which can be drawn tight around the pot, thus securely covering the entire plant. These bags will easily last for years. After the plants are loaded on the wagon place tightly corked cans or jugs of hot water among them, wrapped up well that they may not injure those plants which come in direct contact. By this method comparatively tender plants can be carried considerable distances in very cold weather without appreciable injury. G. M. STRATTAN.

Duluth, Minn.

Make Money Now By WIRING VAUGHAN FOR Xmas Stock.

THE HELP FOR CUT FLOWER WORKERS AND FLORISTS, FLORAL DESIGNS,

PUBLISHED BY A. BLANC AND J. HORACE McFARLAND,

Has been kindly received, although but a few weeks. It hits a weak spot, and helps those who sell floral work in many ways. 162 royal octavo pages, including 50 plates of designs, printed in soft tints and rich tones, and a complete treatise on floral work. Send for it, or send for a prospectus if you want to know more about it first. The extracts below show how it has impressed subscribers:

"Cheap at \$5 per copy; to florists in small towns must be very valuable," H. H. HUNTRESS, N. H.
"A book that no local florist ought to be without. . . . Will save me time in selling set pieces." J. FULLER, Mass.

"Well pleased; . . . admire plain English hints upon design work." HUNTS, Pa.
"I find it most satisfactory to show my customers to select from. It is the proper thing in the proper place." J. G. EISEL, Phila.

"Highly creditable to the floral art." J. BREITMEYER & SONS, Detroit.
"For the florist doing a retail cut flower business is almost indispensable, since it illustrates that which cannot well be described. It will help to improve the taste, and give the average florist a source for ideas." E. A. SEIDENWITZ, Maryland.

PRICE, substantially bound in cloth, \$3.50, on receipt of which it will be mailed promptly by

J. HORACE McFARLAND, Harrisburg, Pa.

Illustrated Catalogue free upon application.

Some Names.

John Thorpe of Pearl River, N. Y., the expert on chrysanthemums, is racking his brain to discover appropriate names for the twenty-two new seedlings exhibited by T. H. Spaulding of Orange, N. J. Mr. Thorpe is a combination of the wag, the scholar and the botanist, and his Latin is as perfect as his chrysanthemums. He proposes to call the biggest bloom, for obvious reasons, the "Mattquayensis Pennsylvanus;" the smallest "Jacobus Cooganus Junior;" a quilled specimen, "Heraldi Scripto;" the prettiest, "Broadwayensis Pulchra;" a brown one, "Castanea Whiskeria," which, he explains, means the American chestnut with whiskers on. He gives that extraordinary name to a flower because he says that for years past he has seen it sent in as a new discovery in the chrysanthemum world. —*New York Herald.*

THE AMERICAN GARDEN THE AMERICAN FLORIST

BOTH
\$1.85
Before
JAN. 1.

After Jan. 1st the price of the American Garden will be \$2.00.

The "special numbers" of the AM. GARDEN during the past year have been a Rose number, a Water Plant number, and two Chrysanthemum numbers. During the year to come there will be several special issues, very much finer than any yet issued.

Hundreds, yes thousands of Florists read it regularly to keep posted on what the Amateurs (their best customers) are doing. The GARDEN is so greatly improved that its low price is a marvel to many, yet the advance during the year to come will be far greater in every way.

Subscriptions for 1889 are received now (up to Jan. 1) at \$1.00, including numbers of this year from November. After Jan. 1 the price will be \$2.00.

With AMERICAN FLORIST, one year, \$1.85, if sent before Jan. 1st; WITH ANY BOOKS AND PERIODICALS AT REDUCED PRICES. Address, stating your wants,

E. H. LIBBY, Publisher,

751 BROADWAY, N. Y.

GARDEN AND FOREST

An Illustrated Weekly Journal of
HORTICULTURE, LANDSCAPE ART AND FORESTRY.

Edited by Professor C. S. SARGENT, of Harvard.

Every progressive florist should read this new journal. Its pages contain from week to week articles on flowers, their cultivation and the most artistic methods of using them for purposes of decoration. Subjects bearing on the work of florists and the influence of their work upon the public taste, receive special mention. The paper is read regularly by many of the most intelligent florists in the country, who find in it information (especially about new flowers and plants) and suggestions not to be found in any other publication. Now is the time to subscribe.

\$4.00 a year. Club Rate, 5 Subscriptions for \$16.00.

GARDEN AND FOREST, Tribune Building, N. Y.

If you wish to make a Christmas present to your friend, send him GARDEN and FOREST for a year. Every week will increase his appreciation of the gift.

HUGHES' SOLUBLE FIR TREE OIL.

FLORISTS AND NURSERYMEN SHOULD
NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectually all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants: such as ferns, etc., if used as directed. Used as a WASH it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

It kills insect life on man, animal, or plant, without injury to the skin, wherever parasites may appear.

Packing Plants.

We hear considerable complaint of careless packing by shippers. "Plants were evidently in fine shape when shipped, but were terribly crushed when we received them." is a common complaint. Wholesalers would do well to devote some thought to this question and supervise more closely the work of their packers. However excellent plants may be when shipped, if they are ruined in transit previous quality counts for little. We have several times heard the remark made "Blank's plants are usually good, but every shipment I get from him is nearly ruined through poor packing, so I buy from Dash whose plants are not quite so good, but they come through in better shape." This goes to show that careful packing is fully as essential as skillful growing, to build up a permanent business. A word to the wise, etc.

Law Suit About Lilac Bushes.

The following which is of interest to the trade we clip from the Jersey City Journal:

TRENTON, N. J., Dec. 3.

Advisory Master Garrelson filed an opinion to-day in the case of Hollinger vs. Asmus, in which he advises a dismissal of complainant's bill. The defendant is a florist and rented some land from one Ernest. Hollinger afterward came in possession of the property under a tax title. At the time of the original renting the premises were in sods and weeds, and he, the defendant, told Ernest that he intended to plant pinks. For two seasons pinks were planted, but afterward the land was used for growing lilac bushes. His purpose was to secure the flowers in advance of the season at which they bloom in the open air. In this way the flowers became valuable in the market, while otherwise they have but little value. To accomplish this early blooming the bushes are planted in the open ground and allowed to grow until they are at an age when they will bloom. In the fall prior to the winter or spring in which they are to be forced, they are dug around, lifted from the ground and removed to the hothouse, and are in bloom shortly after the removal. The lilacs on the premises were all planted for this purpose, and the question in the case is whether the bushes come within the same rules as trade fixtures and removable by the tenant, or whether they belong to the reality. The Advisory Master holds that the tenant may remove the lilac bushes and advises a decree to that effect.

Overhead Heating.

I wrote you last season giving a description of my house and mode of arranging pipes for overhead heating. The results were so gratifying in the healthfulness of my plants, the large number of flowers and size, to the plants, the vigor of growth—especially Crimson King and DeGraw, as well as those of more robust growth, as to fully endorse all that "L. W." stated in article on "Diseases of Plants," on page 350, March 15 number, as to the natural and beneficial influence of overhead heating on the healthfulness of plants.

I find that I do not need so copious waterings nor so often as when I run with under heat. The bottom of soil is moist and cool even when the top is quite dry. I am not troubled at all with red spider, and it is very rare that I have any green fly. I only fumigated five times during last winter and did not use tobacco stems under the benches or in the walks. I filled the same house with carnations Sept, 1 this year, and under the benches are a variety of plants, yet I am not using stems nor fumigating.

I am now just finishing another house for decorative and bedding plants which I shall heat in the same way. Nothing could induce me to use underheat again. If Mr. May would try overhead heating for roses he would, I think, be very much pleased with results. When ventilating the cool air passes the hot pipes and is warmed to a genial temperature by the time it reaches the foliage, giving no "chill" to induce mildew.

Westfield, N. Y.

Ives' Putty Machine.

Patented Jan. 8, 1887.

The best device ever invented for laying putty. With this you can make old leaky sash perfectly tight without removing the glass. It will do the work of five men in bedding glass.

Sent by Express on receipt of price, \$3.00.

J. H. IVES, DANBURY, CONN.

HALES' MOLE TRAP

For destroying ground moles in lawns, parks, gardens and cemeteries. The only PERFECT mole trap in existence. Guaranteed to entice moles where all other traps fail. Sold by seedsmen, Agricultural Implement and Hardware dealers, or sent by express on receipt of \$2.00 by **H. W. HALES, RIDGEWOOD N. J.**

"15 YEARS' EXPERIENCE. THE GURNEY SAVES 33% PER CENT IN FUEL."

Letter from Thomas Gray, of Fitchburg, Mass.,
In reference to

GURNEY HOT-WATER HEATER.

FITCHBURG, MASS., April 13, 1888.
Dear Sirs:—In answer to yours, asking my opinion of the Gurney Hot Water Heater which you sold me, would say that I have had fifteen years' experience in heating hot houses by water, and must say the Gurney Heater purchased of you has proved itself a wonder, both in power and economy, using one-third less fuel to get same results than any heater I have ever used. The brick-lined pot I consider a special feature, as it renders combustion equal throughout the entire pot.

Yours truly,
THOMAS GRAY, Florist.

SYRACUSE POTTERY CO.

We wish to induce all to try our flower pots now before the sale of 1889 opens. Prices of our **READY PACKED CRATES** in 1889 will be for spot cash—

3,150 Thumbs,	\$3.00;	1,800 special 3-in.,	6.00;	600 4-inch,	\$1.75;	160 6-inch	\$3.50
2,625 2 1/4-inch,	8.00;	1,150 3-inch,	5.50;	300 4 1/2-inch,	3.90;	108 7-inch	4.00
1,875 2 1/2-inch,	7.25;	875 3 1/2-inch	5.50;	320 5-inch	4.40;	60 8-inch,	4.00

But to attract new trade we now offer **UNTIL DEC. 31st**

* 5 per cent. Discount on all Sizes. *

This deducted from above crate prices leaves the net price per 1000—**SEE HOW LOW!**—7 inch, \$35.10; 6 inch, \$20.90; 5-inch, \$13.18; 4-inch, \$7.51; special 3-inch, \$4.38; 2 1/4-inch, \$3.69; 2 1/2-inch, \$2.90; thumbs, \$2.42 per 1000, but only for a few days. Send your order by Dec 31st and we will fill it at 5 off, but we allow no discount in 1889. Samples free in first crate. Our freight rates are very low. Try a crate.

J. NEAL PERKINS, Manager, SYRACUSE, N. Y.

THE Whilldin Pottery Co.

JERSEY CITY, N. J., Oct. 11th, 1888.

I have carefully examined the "STANDARD" Pot adopted by the Society of American Florists, and am thoroughly satisfied that it is the best model of a pot I have ever seen. The projection or "foot" at the bottom of the pot insures perfect drainage when placed on a smooth surface, and the deep rim or band at the top gives it strength, where the danger from breakage mostly occurs. I estimate that the loss from breakage by the use of this pot will be at least 25 per cent less than that of the ordinary pot, without the deep band or rim.

PETER HENDERSON.

Cost of Greenhouse Construction.

Can any of your correspondents give the cost of building two greenhouses one hundred feet long by twenty feet wide, side walls three feet high, wooden posts boarded and clap-boarded? And which would be the most economical way to heat the same by steam or hot water? Said houses to be used for forcing roses and general flowering plants for wholesale. Temperature to run not less than fifty-five degrees in zero weather.

Gloucester, Mass. ENQUIRER.

St. Louis.

At the last meeting of the local Florists' Association officers for the ensuing year were elected as follows: Chas. Cannon, president; S. Kehrman, secretary; Alex. Waldbart, treasurer.

J. M. Hudson, formerly with the Jordan Floral Co., has opened a wholesale cut flower store at 1225 Market street.

Chas. Cannon and C. Young & Sons have had fine displays of chrysanthemums. John Young is recovering from injuries received by a fall from a wagon caused by the breaking of a wheel while driving.

Wm. Schray has built two rose houses 20x85 each; Luther Armstrong two 100x17 each; J. W. North one 120x25.

SEED OF EVENING GLORY.

SOCIETY OF AMERICAN FLORISTS.

JOHN N. MAY, Summit, N. J., president; W. J. PALMER, Buffalo, N. Y., vice-president; WM. J. STEWART, 67 Bromfield St., Boston, Mass., secretary; M. A. HUNT, Terre Haute, Ind., treasurer. The fifth annual meeting at Buffalo, N. Y., August 20, 21, 22, 1889.

THE EXECUTIVE COMMITTEE of the Society of American Florists meets at Buffalo, N. Y., on Tuesday the 15th inst. to arrange a programme for the convention of 1889.

THE AMERICAN FLORIST has always been and always will be strictly a *trade* paper. Its subscribers include only florists, nurserymen, seedsmen, gardeners and the employees of those in these lines. It is the *only* strictly trade paper for florists published, in this or any other country. It was started as a *trade* paper and has been maintained as such only. The wholesale prices which appear in our columns are seen only by those *in the trade*. When any one soliciting an adv. from you for some other publication makes any statement regarding the FLORIST contrary to above you may set it down as false.

Pots of Uniform Sizes and Shapes.

At the morning session of the second day of the convention of the S. A. F. held in New York city in August last, the committee appointed (by the executive committee at their meeting in January preceding) to "consider the propriety of recommending the florists of America to adopt uniform sizes and shapes of pots," made a report strongly recommending that the society should adopt a uniform standard of sizes and patterns, and submitted samples of what it conceived to be the best adopted for the uses of florists. Considerable discussion followed, developing the fact that the members were almost unanimously in favor of adopting the idea advanced by the committee; the matter was, however, referred back to the committee for consideration and a further report at a subsequent session.

At the afternoon session of the same day a paper was circulated by the committee among the members for signa-

tures, which was headed as follows: "The undersigned, members of the S. A. F., hereby give notice that in future they propose to buy only standard sizes of pots as adopted by the society;" this was signed by over three hundred firms, or nearly all to whom it was presented. After adjournment of the convention the committee (in accordance with instructions received at the meeting) caused to be made another set of pots somewhat wider at the bottom and with other improvements; these latter samples were submitted during the months of September, October and November to a large number of the leading florists of New York, Philadelphia and other sections and received unanimous approval.

The committee has done all in its power to secure a pot as nearly perfect as possible and has sent to most of the potters in America a copy of an engraving giving the exact sizes and shapes as approved, (those who have been inadvertently omitted will be supplied on application to the chairman, R. Craig, 49th and Market streets, Philadelphia, Pennsylvania).

It is to be hoped that the makers of flower pots throughout the country will cheerfully and quickly respond to the wishes of their patrons and furnish them with what they so much desire.

ROBT. CRAIG, chairman of committee.

[See supplement to this issue with cut showing the exact shape and sizes of the standard pot as adopted by the society. Post it up for reference.]

The Heating of Greenhouses.

The leading question among florists, especially those commercially engaged, is how their greenhouses may be most satisfactorily heated. Economy of fuel is demanded with a persistence born of a conviction that they are not now getting such results as are due to them. They naturally ask: Why is it that with all the advancements made in the science of heating and ventilation, greenhouse heating has to a great extent stood still for twenty-five years?

There are some difficulties encountered in greenhouse heating which have undoubtedly deterred engineers from giving to greenhouse work the same careful study which has been applied to other departments of their calling. We are compelled to acknowledge that the average or typical greenhouse in this country is heated with very little regard to economy of fuel. So long as the florist's greenhouse stock has grown well he has heretofore paid his coal bills ungrudgingly.

What are the requisites to a perfectly heated greenhouse?

First: A system of transmission and radiation which will maintain a uniform

temperature of radiating surface; this radiating surface must be so located that the hot air currents are positive and in the right place, rising up behind the benches under the glass and breaking up the cold counter current which always follows down under the glass, unless forcibly broken up and pushed away by the hot current off the pipes. We have seen many houses in which the direct reverse of this was true, the cold current dropping directly on the plants. The cold or counter current of air should all of it so far as the side benches are concerned, pass close to the floor under the benches till it comes into proximity of the pipes, where it is expanded and forced up behind the bench and under the glass. There must be a sufficient amount of radiating surface to maintain the required temperature and such surface must be so distributed that the house temperature will be practically uniform in all parts of it.

Second: A furnace and generator of simple design and durable material; no complex parts are allowable. A sectional device made up of innumerable joints sure to leak and cause annoyance cannot be tolerated by the greenhouse proprietor. Every part of it must be of easy access to clean and brush out and to make repairs. The furnace must show economy in the combustion of fuel; must be easy to fire. The whole apparatus must be of ample power; under complete control of fireman, and easy to manage. Having all this and a well built house a superior heat is bound to follow.

The two distinctive systems most largely used, the steam and the hot water systems only, will be noticed in this article. Each system is thoroughly practical and capable of showing a very high degree of economy. It is not our purpose to enter into a critical comparison of all the merits of these two systems or to prove by argument and practical data the superiority of one over the other, but to direct attention to a few of the most salient features of the two systems.

It is now quite well understood and acknowledged by engineers, and greenhouse men as well, that steam is a very convenient medium for the transmission of heat long distances. That it does it with little loss from friction in the pipes and when properly piped no diminution or appreciable diminution of pressure, and with no diminution of pressure there can be no diminution of heat in any pipe no matter how remote from the boiler; a fact we cannot absolutely attain in any hot water system. These two points, the low factor of loss from friction and the uniform temperature of all radiating surfaces are strong and incontrovertible facts in favor of the steam system, and can not be claimed by any other system we are acquainted with. The perfect

ease with which every steam pipe is controlled, makes the system very popular with those who have steam plants designed and constructed in accordance with the best practice.

Without going further into the merits of steam we will take up the hot water system and so far as this article is concerned will assume that hot water properly applied to greenhouse heating is in all cases a very superior heat, very economical in its actual results, and that in many situations it is superior to steam, more economical of fuel and attendance than any steam plant is capable of. But we must allow and assume at the start that hot water heat is not quite so uniform as the steam heat, which is invariable or varies only with the pressure. The hot water after being expelled from the boiler is continually and gradually imparting its heat to the surrounding air till it is again returned to the boiler, several degrees colder than when it left it. This feature of loss and lack of uniform temperature of hot water pipes and the friction which must be overcome in forcing this water through long pipes are inherent to the hot water system, and is in an absolute sense beyond the control of the engineer. However, an intelligent use of the means at his command should, and we think does, enable him in a great measure to overcome these difficulties and bring the hot water system to a plane of excellence, even in this particular, nearly equal to steam. It is our experience that in extreme cold weather in our northern climate, there is no system of heat known to the engineering profession, which can show better results than a good steam system of the most approved type, unless we allow the hot water system a much greater radiating surface than is allowed the steam system.

We have little left us now to bolster up our favorite system of hot water from an economical point of view except a lower temperature of radiating surface, and consequently a lower chimney temperature. If we assume a pressure of 15 lbs. in our steam boiler we have a steam temperature of about 250 degrees Fahr. That temperature is constant. To maintain it we must have a high furnace temperature, and when the gases of combustion have passed out from the boiler, having produced all the possible useful effect, there must be in the chimney a temperature many degrees higher than the steam temperature, which we have assumed to be 250 degrees. The chimney temperature will be governed largely by the useful effect or economy accomplished in the boiler. The nearer the chimney temperature approaches the steam temperature the greater and more noticeable will be the economy of fuel in the furnace. Now it must be observed that in the steam system this chimney temperature is nearly constant, no matter how great the fluctuation in temperature of the out door air. We can't raise steam without 212 degrees of heat and without steam we can transmit no heat into the houses. Tersely expressed the steam boiler chimney is always hot, never less than 220 degrees and often 300 degrees and over. Here then is the problem which confronts the steam engineer. How, during a mild night with a steam plant at his command, and this stream of hot gas rushing up the chimney into space out of his reach, to make this plant do the work with a fair showing of economy. Well, the problem is before him but he has not yet solved it.

The hot water apparatus under the

same conditions yields to his wishes beautifully. A slow fire imparts a gentle heat to the water, circulation at once commences, the necessary radiation heat is soon obtained and an examination will show that the temperature in the chimney is not high enough to burn the hand. Under the former conditions, or zero weather there can be little difference of economy in the two systems, for if we allow the hot water system the same amount of radiating surface as the steam system, the radiation temperature must be the same in each system. In raising the radiation temperature our chimney temperature is raised with it, and our hot water economy goes up the chimney along with it. It follows then that hot water apparatus should have a more liberal allowance of radiating surface than steam requires, otherwise we do not derive all the benefit which belongs to it. With an out door temperature of 30° to 40°, a very moderate temperature in the hot water pipes will maintain the required house temperature, and we can produce this low temperature granted a boiler of the best construction, without creating a high temperature in the chimney. It is this saving of heat which makes the constructing engineer, who is striving to meet the demands of his customers for a fuel saving apparatus, look so kindly upon hot water as a medium to receive and carry the heat generated in the furnace to his radiating pipes. The problem of reducing this high smoke stack temperature is solved with hot water as a conveying medium provided the boiler is of a good type and is capable of utilizing a due portion of the heat from the furnace.

Careful investigation and experiment has led the writer somewhat against his will or former ideas to the opinion that for all small plants, and many large ones, hot water will produce, or is capable of producing, results tending toward true economy, that with our present knowledge of steam can not be attained by any system of steam heat.

Assuming this to be true the next inquiry is how we can best perfect and carry out a good hot water system for greenhouses. It is not within the scope of this article to enter into a detailed description of the many different hot water systems in use. The underlying principle which governs them all is essentially the same in each. The heating profession, and the florists as well, are gradually gravitating toward a higher pressure system than the old low tank system involved. Instead of the old cumbersome 4 inch cast iron radiating pipes, wrought iron pipes with screw threads are most in favor. Some engineers have found 1½-inch pipes very successful, 1-inch pipes have also been used. The writer's best success has been achieved by the use of 2½ and 2-inch pipes.

The closed system of hot water heating can be made to do effective work, but it is more or less complicated in some of its features, and deserves little attention from those interested in the promotion of greenhouse heating. An open system under a pressure of ten to twenty pounds without any expansion tanks in the greenhouses, has many desirable features. We have obtained the best results with that system.

We have this year heated the new houses of Mr. Julius Scharff, of Floral Park, Long Island, with that system, with extremely promising results. We hope later on, when the weather is colder,

to make some experimental tests with this apparatus, and if they prove to be of value and interest the result will be furnished to the readers of the FLORIST.

Mr. Scharff's houses are built in rotation with a large roomy shed across the ends of the houses. The boiler pit is located in the shed. The mains rise directly over the boiler and run along the ends of the houses and over the greenhouse doors; from these mains the "feeders" drop down to the radiating pipes under the benches. The return main is in the shed and runs along the ends of the houses under the floor. All the mains and auxiliaries, shut off valves etc. are in the shed. The radiating pipes are 2½ and 2 inch. The outward flow pipe is 2½-inch; at further end of the house turns and branches into two 2-inch pipes on the return. Two of the houses are not separated by inside partitions. In these a 2½-inch feeder branches into two 2-inch pipes which are hung under the gutter between the two benches; the return is duplicate of the outward flow and suspended directly under them.

This arrangement gives a very uniform distribution of heat under both benches and leaves the entire space under them free for any useful purpose. It will be noted by most that this method of hanging pipes is not desirable for more than two houses, for if more than that number were left open without partition the outside wind pressure would certainly press the air inside of houses to leeward, and make the houses of uneven temperature. There could however be no objection to erecting the partition between the two lines of pipe which would effectually stop the evil. Hanging the pipes in this position produces a very natural and desirable circulation of air throughout the houses. The pipes from their position under the gutter compels the hot air current to rise behind the benches and push away the cold current which naturally falls from the glass in close proximity to the plants.

In this plant the water tank which supplies the greenhouses is in the shed. This tank was utilized for the water supply to boiler and is also made to serve as an expansion tank for the whole system. The height of tank is sufficient to create a pressure in the pipes of about fifteen pounds, which allows a hot water temperature of nearly 250 degrees, a heat equal to the usual temperature employed in steam apparatus. The circulation is very strong and rapid and the water returns to the boiler very hot.

In describing this apparatus we have already occupied so much valuable space that the subject of boilers must be left for another article. E. S. TITUS.

Hempstead, Long Island.

Begonia Octopetala Lemoinea.

ED. AM. FLORIST:—I beg to send you a photograph of a new kind of autumn flowering tuberous begonia. This novelty is the result of a crossing between *Begonia octopetala* L'Heritier and some of the finest tuberous rooted begonias. As you may judge from the photograph the result is a magnificent one, and the new race *octopetala Lemoinea* is one of the handsomest that I have ever raised.

The root is somewhat irregular, lengthened, black; the herbaceous stem very short, in such manner that the leaves seem radical, these are broad, undulated, of a glossy green with round hairy stalks. The plant bears six to eight erect flower stalks big and hairy, a foot high loaded with large flowers. The individual blooms attain the size of three inches,

BEGONIA OCTOPETALA LEMOINEA

are composed of six to eight large oval petals, which give them somewhat of the shape of *Anemone japonica* or *Anemone fulgens*. A nearly complete range of colors from the pure white to the scarlet with various shades of pink and carmine, is to be found in this new class which produces a beautiful show of blooms at the time when the brightness of the tuberous begonias is over.

The photograph was taken November 10, 1888, in my nursery from a variety of *Begonia octopetala Lemoinea* with pink flowers and is one sixth natural size.

Nancy, France. V. LEMOINE.

Notes on Building Good Greenhouses.

Florists I think will unanimously agree with me when I say that one of the most important branches of our business is the building of first class greenhouses, thus laying a good foundation from which the natural expectation will be good results.

Those contemplating the erection of such houses will find it to their advantage to visit those recently built by Mr. Chas. S. Price at Lansdowne, Pa., as they are certainly the most complete houses erected in this vicinity and this opinion is the universal one expressed by great numbers of florists who have inspected them.

One of the first things one must look at is the location. In this respect Mr. Price is particularly fortunate as the ground on which he has built has a southern exposure with a gentle slope in that direction the greenhouses facing the same way thus reaping all the benefits of the sun's rays, which are so necessary, especially so to one in his business, that of raising cut roses for the Philadelphia market.

There are six houses and they are all the same size, 100 x 20; the posts are of cedar, very heavy and placed but four feet apart; the walls are of triple thickness, first being rough boards then coming a lining of heavy building paper, which is finally covered by the outside German siding; thus one will see that there are no cracks or crevices through which the cold air can creep in and this means quite a saving in steam, in which system of heating Mr. Price firmly believes. First quality French glass will be found in these houses, large panes 16 x 24, there are eight panes, 24-inch, between the front wall and the ridge, the sash bars 1½ x 3-inch are supported about half way by iron pipe some 1¼-inch, the ridge being strengthened by a like pipe every ten feet.

The ventilating apparatus is the neatest

and strongest I have ever seen being arranged in the following manner: About one foot from the bottom of the ridge there is a cross 1¼ x 1-inch, the inch way being reamed out so as to allow the 1-inch pipe that is used for the shafting to work more easily. It will be noticed that the shafting is directly under the ridge, this may at first thought appear to make it very difficult for the arms on the ventilators to work properly, but it does not have that effect as the ventilators work very easily, in fact more so than any others which have ever come to my attention. Two of the "Evans' Challenge Machines" are placed in each house, they are giving entire satisfaction and Mr. Price endorses them most highly.

Another evidence of the popularity which the locomotive boiler enjoys in our business is here given as Mr. Price has placed two of them in his cellar which has been excavated some ten feet below the surface of the ground and walled up in a most substantial manner by a hard stone which abounds in the locality. The boilers are each of 25-horse power and he has them so arranged that either one or both may be used as required. A good idea and one which I believe is original with Mr. Price, is that in casing the smoke stacks, which is by a galvanized covering, a space of four inches has been allowed so as to let all the dust, etc. have a free and unobstructed passage from the cellar to the open air, and this is something which readily commends itself as a great convenience. The shed or work room is placed very advantageously, there being three houses on either side of same connecting with each and every greenhouse and is 16 x 90 feet.

The water supply is also worthy of mention. Mr. Price, not believing in the efficacy at all times, especially the summer season, of the wind mill, has a steam pump of the Worthington make, which throws a continuous 2-inch stream up to his tank some twenty feet above the ground, said tank having a capacity of 4,500 gallons. In connection with the shed I would state that the roof has a slight slope so as to run off the water, and along the edge the tin which forms the covering is kept up three inches on either side so as to prevent any icicles from forming and dropping on the glass. The space between each house is twelve feet, and consequently none of them are shaded by each other and thereby all the light possible is attained.

The benches are all made of iron and have slate bottoms, the side benches are placed eight inches from the walls so as to make allowance for any drip to fall behind the bench and so not injure in any way the plants on the benches. A strong hook driven in each of the cedar posts serves to keep the benches perfectly firm and steady. The center benches are three feet wide with a passageway between them of twelve inches so as to permit of syringing, etc., and in not having this space eighteen inches instead of twelve inches, Mr. Price thinks he has made a mistake which other florists would do well to avoid, as twelve inches is not room enough for a boy and still less for a man to work in comfortably. These center benches are fastened to the 1½-inch pipe which supports the roof by hooks made of ½-inch iron bent around the angle of the benches.

To account for the rolling of the steam pipes caused by either expansion or contraction as the case may be, the pipes are supported by an inch iron pipe connected to the T iron legs by a set screw,

having on it a lug which fits loosely on the inch pipe.

If Mr. Price's roses are to be taken as a criterion the supposition that slate benches have a tendency to produce club root is to use a slang phrase "away off," as his roses are doing as well if not better than they would have done on wood. Many people who use slate do not consider that the soil dries out on slate more rapidly than on wood and therefore the plants are not kept sufficiently wet, which fact no doubt gives rise to the above mentioned presumption. The La France and Bride roses which he has been sending to the market have been almost universally pronounced the finest in Philadelphia.

Mr. Price is one of the most successful growers of the rose Pierre Guillot around Philadelphia and it has proven itself to be his most profitable production. Strange to say there are three other florists right at Lansdowne who have tried to grow this rose but have failed to make anything out of it.

These houses of Mr. Price are planted as follows: No. 1, Bennett and Pierre Guillot; No. 2, Papa Gontiers and Niphetos; No. 3, The Bride; No. 4, Mermet; No. 5, La France; No. 6, Mrs. John Laing and Magna Charta. The crop in this latter house is expected to be on in the latter part of January. Should any florist wish to have any particular thing given more definitely Mr. Price will be pleased to give him all the information he may desire. WALTER W. COLES.

Lansdowne, Pa.

For Florists.

BY WM. MATHEWS.

The season is at hand when lovers of the beautiful in nature will be asking for something lovely in flowers and many florists will have their energies taxed to get together the desideratum in that line. Fine roses will on some days be a short supply and in consequence very costly; lily of the valley, lilac, freesia, carnations, violets and a host of other good all around flowers will not be just the thing wanted to supply the demands of some customers. The florist who keeps abreast of the times will suggest to such a bouquet of orchids. "Why yes," answers the customer, "but are they not exceedingly costly?" "They are somewhat expensive, so are choice roses just now, and really I think that taking into consideration their lasting qualities, their beauty and loveliness, they are about as cheap as any other flower." A truth that I know many of our florists do not like to admit, and those are the ones that are continually harping against the advent of the orchid flower. They do not take kindly to new ideas, they are angry and jealous of those florists who (fortunately for them) received the orchid with open arms and are in consequence making a clear walk over in the race of choice decorations and rare designs.

The cultivation of orchids has been dubbed by many an English "fad," a

"spasmodic craze," etc. To all such I would venture the question: How is it that for the last forty years their cultivation has been steadily on the increase in England, France, Belgium, the German Empire, Austria and Russia? To-day it would astonish the most skeptical anti-orchidist to see the immense collections in those countries, and the so-called craze is still marching along with the progress and refinement of the age. They (the orchids) have become deeply rooted in the hearts of those who live not to feast alone their stomachs but their finer sensibilities as well.

The American people are the greatest supporters and admirers of everything high in art and nature, their purses are always open to a thing of merit, they want the best and are liberally and openly free to pay for it. The florist, depend upon it, who caters to these tastes will surely profit by it. I don't care how many Charlies and doubting Thomases there are that are ready at every turn to cast a stigma upon orchids and their culture. I am sure that the orchid will take such an upward start as to better the condition of its more humble neighbors and that the stimulation will be so great that ere long we shall have chrysanthemums as large as a soup plate, carnations the size of a policeman's badge on "parade days," and roses as big as the antagonism of some shortsighted florists to the orchid.

Compare the bouquet style of '68 to the style of a bouquet for same purpose to-day; compare the quantity and variety of winter floral productions of that date to the present, what a difference! Customs and styles have changed to an alarmingly large degree. The florist who cultivates and brings to public view flowers of the highest standard of quality will rank above those that are content to move along in the groove that they seem to have been molded in without a single aim to better the taste in floriculture or their condition. The florist who uses his best endeavor to raise the standard of perfection will surely take first rank, a very pleasant thing to take, even if there are not so many dollars in it. He will also have the satisfaction of being cognizant that he has elevated his profession and taken infinite pleasure himself and at the same time received the encomiums of his patrons.

This winter I am sure will alter many florists' views and opinions of the value of orchid flowers. Those that don't use them will lose many good orders that they would have had if they kept a few orchid flowers in stock. We will suppose a grand reception about to take place in one of our large cities. Three fourths of the invited guests are on terms of intimate friendship, each one knows the style and taste of the other. Mrs. B. knows well that Mrs. C. will order the choicest basket of orchids that her florist can put up, Mrs. B. will determine that she can not quite go a basket of orchids, but will go to her florist and order a much more expensive basket of other kinds of flowers than she otherwise would have done if she had not been impressed with the idea that Mrs. B. would order the orchid basket. So in this way the orchid will tend to increase and elevate quality, price and quantity of other flowers instead of rivaling and absorbing the place that other flowers had occupied previous to the advent of the orchid in this country.

I have myself four houses devoted to orchids, and I declare that I am continually adding stock of other flowers such as roses, carnations, violets, etc., and every now and again I have to buy

in all the different sorts and I am getting better prices or I would say putting up much more expensive baskets and other work in the standard kinds of flowers, simply from the fact that at almost every party I have to make from one to five baskets containing more or less orchids. In other baskets containing roses, carnations, etc. I am getting nearly double the prices I formerly obtained, simply from the fact that they have to be made of better quality to compete with those which contain the orchids. My neighbor florists are also doing more and better business every year. There are twelve in this city of 45,000, and every one of them have added this year from one to five houses. There are about eighty-five greenhouses from 75 to 150 feet long in Utica; of course many go off on the five railroads that center here. I think this a pretty good showing for a small city.

I am at present using four houses for orchids and have the roof of the carnation and other houses pretty well occupied, the glass being large, 15 x 18, will of course admit of quite a few orchids overhead without the least damage as far as I can see to the carnations and other stuff, such as poinsettias, bouvardia, etc. The flowers cut from the roofs of those houses are I consider a great gain over a roof without them.

My florist friends do not feel unfriendly to the orchid. If you use them rightly you will find them warm and supporting friends, not given to quarreling with their neighbors but to help them along in their journey through life.

Utica, N. Y.

Black Rust and Black Spot are Contagious Diseases.

The black rust on verbenas, heliotropes, etc., as is now well known, is caused by a minute mite, that can only be distinguished by a powerful microscope and is one of the most difficult pests to contend with in the culture of plants, all remedies seeming to fail.

Last year about this date we picked out one thousand plants of verbenas affected by the black rust, divided them into ten lots of one hundred each, and for thirty days attempted the destruction of the insect with sulphur, tobacco, fir tree oil, Gishurst's compound, pyrethrum, quassia bark, Paris green, Cole's insect destroyer, lime and hot water, using each remedy for each lot. These were systematically and carefully applied without apparently producing the slightest benefit, for the hundred lot to which nothing was applied was no worse at the end of the experiment than those to which the different "remedies" had been applied.

This season we selected with the greatest care only such verbenas cuttings as were in perfect health, and by relentlessly throwing out every plant that became affected we have thus far our stock in better shape than it has been in years, which has made us come to the conclusion that as far as is known to us, there is no remedy against black rust, that the disease is contagious beyond question, and that the only way to keep a stock clean is to throw out every plant having the least taint of the disease, so that it may not affect its neighbor.

We have about come to the same conclusion about the black spot on roses, that it yields to no known remedy and that the best thing to do is to pick the affected leaves off as far as is dared to be done. The season has been unusually wet and cloudy in this section and black spot has troubled us more than usual.

Double White Pansy.

That it too is contagious there is no question. The Hybrid Teas such as the American Beauty are, of course, the first to be affected, but we find in a house in which American Beauties are grown with Perles, Sunsets, Papa Gontiers and Mermets, wherever the American Beauties butt up against any of these varieties for three or four feet they, too, are less or more affected, while away from the Beauties there is not a sign of it; all varieties in the house are in unusually fine vigorous growth and health except the spot on the American Beauties.

PETER HENDERSON.

Jersey City, N. J., Dec. 17.

Talks About Annuals.

Let us discuss the cultivation of the pansy as an annual. The first question that presents itself to our mind is: What strain of seed shall we plant? And this question brings up another: What are the properties of a perfect flower?

Substance of petal is the most important point. However perfect may be the form, however beautiful the color or large the flower, if it is weak and flimsy its beauty is destroyed. The petals must be thick and velvety, a condition which will enable the flowers to keep well after being gathered. The second point is form. The petals must be so disposed as to form almost a perfect circle, yet I think the two upper petals should be a little longer than the others, so as to just break the circle. The margin must be smooth and the petals perfectly flat; not turning up at the edges, which defect

spoils many flowers otherwise perfect. The next requirement which demands our attention relates to color. Whatever the color, it should be clear and pure; with the eye large and distinct. Lastly comes size: Of course it is desirable to have good sized flowers, but size is the least important point of a good pansy.

I believe judges usually adopt the following scale of points: Form, four points; substance, three; color, two, and size, one. If I were to attempt to improve upon this scale, I should say, give to substance four points, or even five; and let us have some good, heavy, velvety pansies.

Referring to my diary I find March 10 has been the average date for planting pansy seed, and May 20 for setting the plants in the open ground. The young plants are treated in the same way as the asters, and are transplanted into beds as soon as the ground becomes dry and warm. The beds are prepared for the reception of these plants as previously described, except that thoroughly rotted cow dung is the only manure used; horse manure should be avoided. Set the plants two feet apart each way, and water thoroughly in dry weather. Almost as soon as the plants have become established in their new position they will begin to bloom; and unless they are closely watched, and all the buds are picked off as they form, the plants will exhaust themselves in producing a few very inferior flowers, and grow very spindlingly.

From the day that the plants are transplanted into the open ground the beds should be examined every morning;

every visible bud should be pinched off and every long shoot shortened; the object in view being to obtain large, stocky plants full of vitality. If this matter is attended to regularly it will only take a few minutes each day, but if neglected even for a day, and the day be a warm one, some of the plants will be sure to flower, which will weaken them and partly undo our previous work. If the plants are thus kept from flowering until cool weather, and then allowed to bloom, the flowers will be of good substance and large size. I do not wish this to be taken as implying that I ever consider the size of the flowers in any different light from that mentioned in my scale of points, but this keeping back process will make large and at the same time heavy and velvety flowers.

After the first of September the flowers of almost all other annuals begin to grow poor, and the first frost practically ends their flowering. But the pansy seems rather to improve than otherwise by any frost that we usually have in September; and it is from the first of that month until the middle of October that a bed of pansies grown as described is in its prime; a time when flowers of all kinds are, I believe, rather scarce. Last fall, after every other flower in my garden had been spoiled by frost, my pansy bed remained for a month in full bloom, covered with an abundance of the most beautiful flowers.

The *Tropæolum*:—Of this extensive genus, including with hardy annuals also greenhouse and herbaceous perennials, three of the annual species chiefly attract our attention; these are:

Tropæolum majus (fall nasturtium).—A well known running species, much used for covering trellises and rustic work.

Tropæolum minus (dwarf nasturtium).—A dwarf species, growing from one foot to fifteen inches in height, and one of the most useful flowers we have; for its compact growth and rich colored blossoms render it an excellent bedding plant.

Tropæolum Lobbianum.—A running species, which may be grown on a trellis, or as a dwarf if the ends of the vines are closely pinched off; otherwise it will cover unnecessary space. The flowers are smaller and more cup-shaped than those of the two preceding species; and are of very brilliant colors.

The *Tropæolum* is easily grown. All that seems necessary is to plant the seed in good soil, see that the plants have plenty of room in which to grow, and keep the soil thoroughly stirred. Sometimes the seed does not germinate very freely and even after it is up the cut-worms destroy many of the young plants; so it is well to sow the seed thickly and thin out when the plants have attained some little size.

Boston, Mass.

M. B. FAXON.

A Double White Pansy.

This addition to our list of useful flowers for florists' use was exhibited at the rooms of the Massachusetts Hort. Society July 21, and was awarded a first class certificate of merit. A large number of the flowers were tastefully arranged with foliage in a basket, forming a novelty in the line of decoration which attracted a great deal of attention.

The flowers are beautiful clear white, of medium size and good substance. They have long stems and are freely produced. It was exhibited by R. & J. Farquhar & Co., Boston. The illustration is from a photograph sent us by the introducers.

Under Glass.

There still appears to be some trouble from diseases afflicting roses under glass, judging from what some of the growers write me. Some have been feeding very liberally, in fact much too liberally, others thought to try a few degrees more heat to kill the mildew, and probably, though unknowingly, have almost cooked the plants; still others gave liberal waterings, because a growing plant ought to need watering at least once a week, the weather of the present season not being taken into consideration apparently; others again started out by giving their plants enough water to make them all intoxicated and then went to the other extreme by holding them without it till the soil at the roots become dust dry, thus choking the plants to death with drought. As far as I can glean from their communications these are a few of the causes of the trouble.

Now to lay down any set rule to follow in any one of these cases would certainly be absurd, as there are so many circumstances to be considered in connection with each and every case quoted above and many others of a similar nature, that I can only give according to my judgment the general principles of plant life and in doing so I trust some items of the same may be found interesting to all who do me the honor to ask my advice on the subject. Many things I shall say will probably be considered repetitions by many of your readers; I can only plead the excuse of necessity in this instance.

Plant life in its wonderfully varied forms is governed by three principal elements: light, heat and moisture. Every climate from the torrid zone to the Arctic regions has a totally distinct class of plant life, suitable to the varied changes of light, heat and moisture contained therein. The rose, according to the best authorities, flourishes best in a climate resembling as nearly as possible our June and September months in the northern states; that being so if we wish to obtain the best results when growing these plants to flower them out of their proper season, we should certainly strive to follow nature's laws as nearly as possible. On going over a record of temperatures for June and September for several years I found the average minimum night temperature was between 54° and 56° and the maximum 76° to 78°. The proportion of light as every one knows during those two months is generally high and of moisture somewhat varied, but I have in my experience always found that the rose, particularly the tea varieties, thrives best in a nicely moistened soil not over wet at any time, nor ever becoming anything like dust dry during the growing season. Nature in all her wonderful storehouse never provides any large doses of fertilizers for the benefit of roses or any other plant, but what it does furnish is done in very minute parcels and under circumstances somewhat different from the usual mode practiced by those who are growing plants under artificial cultivation. And

when we apply fertilizers in any form to plants under glass we can certainly obtain much better results therefrom by giving it in a weak form at intervals as the plants require it than by giving strong doses at once. Again it can be observed by any one who wishes to see it that when the temperatures night and day in the months above named rises much above the figures given, the roses become smaller and if it should continue for any length of time the plants almost invariably stop growing and blooming, and the same law governs them under glass, only in a much more pronounced way, as the plants there cannot get the same atmospheric influence to bear on them *i. e.*, the thorough circulation of air in conjunction with more or less dew at night; on the other hand should a very cool spell occur during these periods, as it sometimes does in conjunction with rain storms, the blooms will not open well and often the plants suffer considerably in health from its effects, first by the sudden check to their growth which stops root action which in its turn produces black spot and other kindred diseases, all of which are caused by the sudden changes from one extreme to another. This certainly ought to teach us that the rose, pliable as it is to our wants, will certainly rebel at any unreasonable treatment we persist in subjecting it to.

In conclusion I would add that after very careful study of this subject, through all my experience in growing roses I have found them always to succeed best where I followed nature's teaching as nearly as possible, consistent with the different conditions of plants in the open air and those under glass, and avoiding as much as possible extremes in either heat, moisture or stimulants, particularly during the fall and winter months, and by giving all the air possible on all favorable opportunities. I do not wish to infer that even under the best possible management a plant or plants will not sometimes become unhealthy, but the chances are certainly much more against them when not properly cared for.

JOHN N. MAY.

Summit, N. J., Dec. 13.

New Roses in England.

Of the roses first generally distributed in this country in the spring of 1887, the majority have of course now been seen very fairly in character, with the result of maintaining the impression made last season that they include some very valuable additions, and constitute 1886-7 a rose year decidedly above the average.

TEAS.

CHATEAU DES BERGERIES (Ledechaux).—A pale yellow tea with a long bud and well-formed flowers; the petals not quite as substantial as might be, but when well grown a pretty addition to the light yellows.

CLAUDINE PERREAU (Lambert) is a seedling from Souvenir d'un Ami with very full globular flowers, somewhat similar in color, but very distinct in form; the plant is very vigorous and bushy and the flower stems very stiff, so that the blooms are carried perfectly erect and well displayed instead of being semi-pendulous like those of the parent.

DR. GRILL (Bonnaire).—This is a very pretty tea which was seen to great advantage in Messrs. Curtis and Sanford's nurseries at Torquay. The plant is vigorous and very free blooming; the flowers

well formed and opening easily, of good size and of a most pleasing coppery yellow color, deeply shaded at the base.

DUCHESS DE BRAGANCE (Dubreuil).—Another pale yellow which at one time appeared promising, but which seems rather near Monsieur Furtado both in habit and flower.

ELIZABETH DE GRAMMONT (C. Levet).—A bushy plant with open-cupped, short-petalled flowers of a somewhat ordinary shade of pale rose; it is not likely to prove at all valuable.

ETHEL BROWNLOW (Dickson).—The great substance of the petals of this charming novelty has enabled the flowers to withstand the rain and consequently to be one of the most conspicuous teas in the garden during the wet season of 1888. The plant is vigorous, exceedingly free blooming and perpetual, of a pleasing rosy shade with yellowish base and perfectly distinct, and the variety is one that all growers may safely plant.

LUCIOLE (Guillot) produces a bud of wonderful length and of still more wonderful color, but, beautiful as it is, there seems no reason to alter the opinion expressed last year, that it will be only a bud rose. To attempt to describe the color is hopeless, for it is a kind of epitome of all the shades existing among tea scented roses, but there seems to be no two opinions about the beauty of the half expanded blooms, which will be in great demand wherever cut flowers are appreciated.

MME ETIENNE (Bernaix).—Fairly vigorous and very free, a pretty fresh rose-colored tea of good size and form, and, though wanting a finer season to prove it thoroughly, distinct and promising.

MME. SCIPION COCHET (Bernaix).—A variety which makes a good branching plant with beautiful glossy, though not large, foliage, very free flowering and thoroughly autumnal; the flowers are of fair size and of a pleasing rosy yellow color with a deeper yellow base, but the margins of the petals are generally wavy or even crimp, which makes the bloom appear to lack quality.

PRINCESS BEATRICE (Bennett).—A very beautiful and refined flower of rich coppery yellow color, invaluable for exhibition and for cutting generally, as it lasts long in water, of good size and perfect form; the plant grows well and is very free, and the variety cannot fail to take a prominent position in collections of teas.

ROSES OTHER THAN TEAS.

COMTE DE PARIS (Leveque).—A fine crimson hybrid perpetual of great promise, vigorous, a free autumnal and with large well-formed flowers.

DR. ANTONIN JOLY (Besson).—A very large flower of distinct salmon-rose color, vigorous and free, and likely in a fine season to be good.

EARL OF DUFFERIN (Dickson).—Unquestionably the best rose of the year, and a rose that is certain to be universally cultivated. The vigor and freedom of the plant, the rich crimson color of the flowers shaded with maroon, their fragrance and the constancy of their fine form combine to render this variety one of the most valuable dark roses that has yet been raised.

GRAND MOGUL (Wm. Paul).—The cold, sunless season does not appear to have suited this dark crimson rose at all well, and it has not been seen in character; it is, however, vigorous and perpetual.

A PARIS FLOWER BASKET

GRANDIFLORA (Bernaix).—The large-flowered single multiflora makes a gigantic climber, and when covered with its great white flowers is most beautiful. First class certificate Royal Horticultural Society.

JOSEPHINE BURLAND (Bernaix).—A hybrid polyantha very distinct from the miniature Mignonette type, having perfectly formed almost white flowers of considerable size, but solitary; dwarf habit and most free.

LADY HELEN STEWART (Dickson).—This beautiful crimson rose appears to have been well suited by the cool season and has been constantly very finely exhibited. In the garden it has been incessantly in flower both during summer and autumn, and from its erect habit and immense freedom has been most effective. The blooms are of good size, with large smooth petals, always expanding well, and the variety is altogether most reliable.

MME. BOIS (C. I. evet).—A most attractive addition of the Victor Verdier race, but quite distinct in color; the flowers are very large, well formed, and of great depth, and of a most telling shade of fresh rose color. The plant is vigorous and free and the flowers most constant.

MME. DESIR (Pernet pere).—A large, very full, distinct salmon-rose flower, which in a hot season will probably prove valuable.

MME. DE WIERRE (Leveque).—It is impracticable to continue trailing about

this rose's interminable original appellation, and it will therefore be best at once to employ the above shortened form. The variety is a promising dark rose of good size and form, very fragrant, free blooming, perpetual and a vigorous grower.

MME. HENRI PEREIRE (Vilin).—One of the very dark roses and an exceedingly fine flower; the plant free and very vigorous. It has frequently been very finely exhibited during the past season, and is certainly not a variety to be lost sight of.

MME. JOSEPH DESBOIS (Guillot).—A very beautiful rose of first-rate quality. The habit is sturdy and erect, as in Captain Christy, from which, however, it is totally distinct; the flowers are large, perfectly formed, almost pure white, with a rich flush of salmon-rose in the center, and are most freely produced, the variety constituting an invaluable addition to the light hybrid perpetuals.

MME. TREYVE-MARIE (Liabaud) may be described as a cherry-colored Marie Baumann, not quite so good in quality, but of similar form and more erect, and of so taking a shade as to be well worth growing.

MAT. BARON (Veuve Schwartz) has been a good deal exhibited this year, but is of a deplorably gloomy color.

MRS. JOHN LAING (Bennett) has proved the most constant rose of its color. Every bloom comes perfect and the plant is most vigorous and free. The only

possible objection that can be urged against it is that its color is rather an ordinary shade of rose, but in the autumn when abundant flowers are produced, even this objection does not hold good, for late in the year the color becomes more clear and pure.

SILVER QUEEN (Wm. Paul).—A good light rose very much in the way of Queen of Queens, but more pleasing in color.

THE PURITAN (Bennett) has caused little surprise by being out of doors this year a complete failure. The flowers are of such immense substance that it seemed impossible that they could ever expand without very great heat, and the absence of sunshine this year settled the question. As a rose for forcing at a high temperature it will probably be valuable.

Of the 1886 roses the most prominent by far has been the exquisitely beautiful Viscountess Folkestone (Bennett), which seemed to defy the unpropitious season, and developed bloom after bloom in the greatest perfection. Charles Dickens, Clara Cochet, Florence Paul and Her Majesty were well exhibited from time to time, and in the autumn Miss House, which may be described as a greatly improved Bessie Johnson, has been very pretty in its delicate blush color. Mme. Musset and Raoul Guillard are two similar and fairly good reds of Marie Baumann race; Rosieriste Chauvry and Souvenir de Victor Hugo, two very free deep reds of Victor Verdier family; Max Singer, the hybrid multiflora, has proved a most useful red climber; and Princesse Amedee de Broglie makes a striking pillar rose, its immense growth being clothed with large flowers of a distinct shade of telling rosy carmine. Mention should also be made of Mme. Villy, that all growers may avoid it, for it is without doubt one of the most worthless roses that has been sent out for years; worse, if possible, than the similar Joseph Metral distributed by the same raiser two years earlier. Among the teas The Bride has been far in advance of all contemporaries and is already a very general favorite; Ye Primrose Dame, Reine Nathalie de Serbie, Comtesse de Frigneuse and Claudius Levet have been fairly good, while the pretty colored bud varieties Marquise de Vivens and Souvenir de Victor Hugo have been very charming in their way. Edmond de Biazat makes a handsome plant with glossy and abundant foliage, and the flowers are of a very fresh rose color, but they are not large and are too irregular.

Thus it will be seen that among the novelties of each year there are some that can already be confidently recommended, and it is only to be hoped that there will be found as many varieties above the average of interest among the Continental hybrids distributed here last spring as among those sent out the year before.—*T. W. G., in London Garden.*

A Paris Flower Basket.

Nothing is more striking to the commercial observer in foreign countries than the wide difference in the classes of plants and flowers sold, from the cheapest to the dearest, while at the same time equally large business is done in the finest stores in one country with plants never so used in another.

The handsome flower basket here shown which was photographed for us in Paris, is an instance of this kind. Four polyantha roses in bloom in 4-inch pots covered with moss filled the basket, which was fifteen inches across at the

bottom and twenty-eight inches high. Very dwarf dahlias and other plants are used in same manner. The basket retailed at 30 francs (\$7.50).

Influence of Wood Ripening on Buds and Blooms.

Paper read by Mr. E. Molyneux at the Chrysanthemum Conference, Sheffield, England.

The ripening of the wood of chrysanthemums is a very important matter in the production of high-class blooms; indeed, without perfectly ripened wood it is impossible to have blooms of the finest quality. What I mean by perfectly ripened wood is wood that is ripened sufficiently by natural means as the result of correct treatment throughout. Sun is essential for the maturation of the wood in all stages of the plant's growth; but in some seasons and districts there may be too much of it and in others not enough, and we must make the best of both circumstances. Wood-ripening does not consist in merely hardening the wood, but storing it with nutriment for the blooms. Forcing the ripening, so to say, by drought or in other ways, contracts the sap-vessels unduly, and impedes the free flow of nourishment for the blooms at a critical time. Those persons who practice such methods in cultivation act erroneously and fail to produce the best blooms.

Seasons vary so much, that the locality in which growers reside is a very important factor in the production of good or bad blooms. Circumstances very often occur over which cultivators have no control. They cannot, for instance, excel during a cold, wet summer in a low, damp district. The higher and drier the locality the harder the wood, and the greater the disposition of the plants to set buds prematurely. This is a difficulty some have to contend with, myself among the number. Where buds are persistently formed long before the time we wish to see them, much valuable time is lost in the growth of the plants in their various stages during the time the buds are forming. Moreover, high and dry localities result in narrow petals and rather small, but solid blooms; while reverse conditions promote broader petals and larger blooms. Where the locality is high, the air, although much rain may be registered, is drier than in the lowlands, and it is this dry air that hastens bud-formation which gives so much trouble to some growers. The proper time to "take" buds of some varieties is upset altogether under such conditions. They form either too early or too late for producing the finest blooms.

The question of dew is important. During a hot and dry summer, as in 1887, the absence of dews in high lying districts is much felt. Dew invigorates, and its scarcity or absence has been the cause of many small blooms. We can regulate and control moisture in the soil, but have practically no power over it in the atmosphere. We may do our best and may do some good, but after all the most we can do is but little in providing compensation for what we may consider the shortcomings of nature.

When the growth of plants is soft and gross, the latter particularly, and the wood pale green instead of brown in color, a want of ripeness is evident. Such plants produce blooms large in diameter, but they are usually lacking in depth and solidity of the petals. This is more noticeable in the incurved section than in the Japanese family. Blooms which are composed of extra broad florets are seldom if ever as solid as medium-sized blooms having narrower petals; neither can the former be considered of such high quality as those deeper in build, and consequently more firm and more likely to stand fresh a longer time. Blooms having unusually broad florets often show decided roughness and irregularity, and the grower is not able to present such blooms in the same highly finished condition as when the petals are narrower and the flowers more solid.

The present season is considered to have been a bad one for the growth of large high class blooms, especially those of the incurved section. This is borne out by the examples which have been staged at various exhibitions. It cannot be said they have been of the highest quality, or as they have been shown in some past seasons. Some stands have been extra heavy in the size of the blooms, owing to the immense breadth of the florets, but many of the blooms lacked depth in proportion with diameter consequently they were not so solid as they would have been had the blooms been deeper in proportion to their breadth. After a summer like the past we expect to see large blooms which lack solidity and closeness of the petals—a condition which is mainly owing to the unripened state of the wood. I am not in favor of extra large blooms of the incurved section, which are only large in one way—diameter—as they lack depth and solidity. My idea of an incurved bloom is one not great in diameter alone, but deep and firm in build, consequently of a better shape. Such blooms are never seen with extra broad petals, but they carry what is known as a good "shoulder." Such blooms as I have described are the result of perfectly ripened wood and are seldom met with after a season like the past. Where prizes are offered for the premier incurved bloom in a show, this honor generally falls to a specimen of the character indicated, and not to a flower which has merely two points in its favor—extra width of bloom and broadness of florets. Blooms which are generally chosen for this honor are usually remarkable for solidity and high finish, which qualities cannot be obtained from blooms which have extra broad and thin florets. The ripened character of the wood is the all-important factor in the production of blooms of the highest possible standard of excellence, and the complete maturation we seek is obtained, as far as seasons allow, by careful treatment from the beginning.

The method of culture I advise as the most likely to obtain the desired end is that of growing the plants in a regular steady manner, not by fits and starts, such as applying water regularly for a time, then neglecting the plants for a few days. Regular attention to potting is important, as if the plants are allowed to become root-bound many roots must be broken in the process, causing a check to the steady progressive growth that is so desirable in plants for producing the finest blooms. Crowding the plants in their younger stages of growth is most hurtful, and antagonistic to the development of vigorous wood and foliage.

Sufficient space should always be allowed the plants. When in their summer quarters they should be arranged in an open position where the sun can shine directly on them, but the position should be protected from north, east and south-westerly winds, which are often so destructive early in the season when the plants are first placed out of doors. Many plants have been so injured by a loss of their lower leaves during May that they have never recovered the desired strength. South-westerly winds, which are prevalent during the end of August and the early part of September, often do much damage to the buds and leaves where the plants are much exposed. The flower buds and their peduncles are at that time so tender that they are apt to be whipped about and so cause a check to the development of the blooms.

Some growers set too much store on plants with extra thick stems and gross green leaves. These are perhaps pleasant to look upon during the summer by the uninitiated, but when the test of good culture comes to be looked for, blooms possessing the desirable characteristics are generally missing. Very vigorous plants, as a rule, produce blooms devoid of solidity and other essentials.

It is possible to have the plants in some seasons ripened too much in dry localities. The summer of 1887 was a most trying one to contend with in high and dry districts, where not a drop of rain fell for eleven weeks, and scarcely any dew during a greater part of that time. The remedy in this case is that of shading the pots from the sun during the hottest parts of the day, by boards set on edge in front of them, fern, cocoa-nut fibre, or mats. Such means keep the roots in a cooler state than they otherwise would be with the sun shining directly on the pots most of the day. In the absence of shade to the pots the roots on the sunny side are almost sure to be killed, and we all know what that means. Plants in low-lying districts invariably produce the broadest florets and the largest, but not the most lasting blooms. The advantage of those which are more solid in character is often exemplified when the two kinds have stood two days at a show and borne the heat of crowded rooms. Those which are firm remain so longer than those which are more or less loose. The latter quickly show an "eye," which proves their weakness and non-sustaining form.

Flower-buds are generally produced upon plants at a more regular time in the various stages of growth when the plants are steadily, hence properly, ripened than when they are not, except in very high and dry localities, where they ripen their growth too early, causing premature bud-formation, which must be counteracted as much as possible, though it cannot always be prevented. Growers in the extreme southern counties often experience too early bud-formation, caused by a too early ripening of the wood, which their northern brethren are strangers too. This generally occurs with the whole of the Queen family, the plants forming flower-buds at times between the end of March and the end of April. This causes a serious interruption in their future growth, and prevents the formation of buds at the time most desirable for the district in which the grower resides.

AMERICAN POMOLOGICAL SOCIETY.—The twenty-second biennial session of this society will be held at Ocala, Fla., February 20, 21, 22, 1889.

ROCK WORK, WITH WATER-FALL AND SMALL LAKE IN THE CONSERVATORY AT FOREST HILL CEMETERY, UTICA, N. Y.

An American Chrysanthemum Society.

The chrysanthemum continues to grow in popularity, and with the rapid increase in the number of varieties, large numbers originating here, in addition to those imported, some organized action must be taken to avoid a hopeless muddle in their nomenclature, and means taken to eliminate the duplicates and poor varieties which are too frequently found in lengthy lists. In England this is in the hands of a society entitled the "National Chrysanthemum Society," and America is now in need of a similar organization. The American Society should work in harmony with other similar societies, but should be a separate organization, composed entirely of Americans who understand the requirements of the American grower.

Conservatory Decoration.

This is a matter to which insufficient attention is paid by the commercial florist. Every florist who does a general trade has a "show house" which is too frequently anything but a credit to him. There is room for great improvement in this direction. He cannot expect to have all his houses as carefully arranged for effect as a private or park conservatory, but he should use more effort to make his show house an exposition of his skill in both the growing and arranging of

plants. Our illustration of a rock work in the conservatory at Forest Hill Cemetery, Utica, N. Y., is presented to stimulate ideas on this matter. Can you not arrange some nook in your show house to be equally attractive?

New York Notes and Comments.

The Florists' Club will give a dinner on or about January 10, on which occasion they expect to welcome brethren from Philadelphia and Boston. A general good time is anticipated, and it will doubtless do something towards reducing that troublesome surplus. In future the meetings of the club are to be held in the evening instead of the afternoon, as heretofore. This gives opportunity for attendance to those confined to business during the day. But it is an inconvenient change to many out of town members, who, after an evening session, will be compelled to go home on the owl train. One member said he would prefer an evening session, because in that case he could get a night off once a month to attend the club, but this is a point of view which will present itself to few married men. At the next meeting Mr. Samuel Henshaw will give a paper entitled "A Plea for the Old-Fashioned Herbaceous Border," which, it is hoped, will be followed by a discussion. So far there has not been so much discussion as

one would wish; the members seem a little bashful about getting up and speaking their minds. It is a pity, too; so many of them are able to give much valuable information, and exchange of ideas should be a marked feature at such meetings. Let every man come prepared to have his little say on any topic that comes up, and we are not likely to hear that the society is losing its grip.

Quite a little excitement was caused recently by the rumor that a great magnate of the seed trade had opened a milliner's establishment. Two large windows in his Cortlandt street store were filled with fine artificial flowers, but there were no visible bonnets, and closer examination showed that the silk and muslin blossoms were arranged in baskets, or on plaques and easels. They were arranged with strands of Florida moss, and most women would call them just lovely. This seems to be opening hitherto unknown channels to the flower trade. Since the florists deal so largely in ribbons, and the seedsmen in artificial flowers the only thing left for the growers to do is to raise heavy crops of Paris bonnets.

All through December the growers have been complaining of poor crops, the result of bad weather. This has been the case especially with roses; they suffer both in quantity and quality. Very good American Beauties were in;

Mr. Nash, of Lake View, N. J.; has been sending in very fine ones. The Nyack growers still seem to be keeping up their reputation, but New Jersey roses are never far behind.

Joseph Towell, of Paterson, has a house full of *Alegatiere* carnations, forming a fine sight. This seems a very prolific variety, and it throws up such clean stems. A very satisfactory grower; it seems likely to take a prominent rank among scarlet carnations. There is very little to choose between Orient and Clifton among crimsons; both are very satisfactory in growth. Clifton is the deeper color and seems a trifle larger.

Silver Spray, a white carnation of comparatively recent introduction, was seen to great advantage as grown by H. E. Chitty, of Paterson. Mr. Chitty, who is rather a specialist in carnations, intends to depend on this sort for his main supply of white ones next season. It is vastly superior to Hinz's White in floriferousness, and the color is remarkably clear and pure; habit good. And her very good sort shown by the same grower is Frederick Johnson, clear deep rose pink, flower round and shapely. Florence is a good cerise. Some large and handsome pansies at the same nurseries were from Herr's strain; they showed a lot of very good dark ones, as well as mottled forms.

Dark colored chrysanthemums are not nearly so much in demand as the lighter ones, say some of the florists. White, yellow and pink are most called for, and the pink people demand (and have failed to get in this flower) is that of a La France rose. Evidently Mr. Fewkes is about to fill a long felt want with Mrs. Fottler.

Towell of Fifth avenue and 47th street, recently arranged a fine decoration for a reception at the house of Col. Brice, of campaign fame. The work consisted chiefly of flowers and was very elaborate.

Mr. George Such, of South Amboy, who at one time had the finest collection of stove and decorative plants in the trade, has now retired entirely from commercial horticulture, though growing a few orchids for pleasure. A good many fine plants formerly in his nurseries have found their way abroad, especially some fine *nepenthes*, of which the collection was unique and valuable. Some of these plants are now at Rose Hill Nurseries; others, including some seedlings of great merit, were purchased by English firms, who named and introduced them. It seems a pity that such a fine collection should have been dispersed. Mr. Siebrecht, who has a weakness for the *nepenthes*, says that his admiration for them had its origin in a visit to Mr. Such's collection.

English holly is very plentiful and very fine; small trees, three or four feet high, are imported by leading florists and make a very good show.

EMILY LOUISE TAPLIN.

Long Island Plant Notes.

BY WM. FALCONER.

GLONINIAS.—Pot up a few tubers for flowers in March and April. They like warm quarters and near the light, but always shaded from sunshine.

CALCEOLARIAS.—Don't let greenfly get a foothold on these plants so long as you can get lots of fresh tobacco stems for \$10 a ton. I take a lot of fresh stems, chop them up moderately small, say three or four inches long, with a hatchet, and lay

these in between the pots on the benches. The vapor from some fresh stems laid on the hot water pipes and sprinkled with water now and again is very destructive to greenfly and thrips. *Calceolarias* will stand a good deal of smoke without hurt, but *cinerarias* are most as tender as *heliotropes*. Rose geraniums and show *pelargoniums* are also peculiarly subject to greenfly.

POLYPODIUM AUREUM as a window plant. When it comes to grafting rhododendrons and propagating the rarest and choicest of trees, friend Trumpey of Cassino, ranks first among men, but when it comes to growing ferns as window plants we must give precedence to Mrs. Trumpey. In her parlor near the window and in a large, deep pan is growing a very fine old specimen of this handsome fern, with arching fronds ten to fourteen inches wide and two and a half to four feet long. She has had it for years; and during all this time as a window plant in winter and a piazza plant in summer.

MY *LAPAGERIAS* are now throwing up fresh shoots from the root. I had some ferns and moss growing around the roots but as soon as I expected *lapageria* sprouts I plucked away everything else so that slugs should have no quarter there, and in order to still further frustrate the voracious little fellows I placed a collar of cotton wool on the ground around the neck of the shoots. Slugs won't cross cotton wool.

SLUGS ARE very fond of an orchid flower spike, and they usually gnaw it off near the base. But as it won't pay to take pains to grow a nice lot of *odontoglossums* or *phalaenopsis* and feed the flower spikes to the slugs we had better put small rings of cotton wool around the base of these spikes.

"THE TONE of this correspondence, and the intimations which it contains, should make those persons who know something about their own gardens congratulate themselves that they are not entirely in the hands of their gardeners." This from an editorial note in *Garden and Forest*, Dec. 19, and referring to a case in which a gardener in England had probably been squeezing Sander the orchid man for commission. Brother Stiles, it is unfair to punish the innocent with the guilty. We repudiate the stigma. Please remember you will catch more flies with honey than with vinegar.

Dracænas.

After hearing or reading the very able essay delivered by Mr. Chas. Ball, at the last convention in N. Y., many of our florists will want to go into *dracæna* growing and a few hints may not come amiss.

Nearly all varieties of *dracænas* are propagated by cuttings, a few from seeds. To get up a stock in the shortest possible time, old stems or canes should be laid on a bench or bed with brisk bottom heat on the sand, and for covering I have always found sphagnum moss to be the best material; the canes are not so liable to decay, and the little cuttings, sprouting from the eyes, grow up faster than in sand covering, and are also less liable to damping off. Another advantage of the sphagnum is, that it seems to keep the life in the canes for a longer time compared with those bedded in sand and we are enabled to get cuttings as long as there are any dormant eyes on the canes.

As soon as large enough the young

sprouts are cut off close to the stem and treated as any other cutting. Many of them will have formed little roots into the moss and all those may be potted at once. It is not a very unusual occurrence that about one-half of the cuttings, or even a larger percentage will decay in the sand-bed before rooting, if the propagating bench is not just right, and I know a number of florists who had rather buy young plants of *dracænas* than to be bothered with their propagation. But it is a very simple matter to root every cutting, however tender it may be, by inserting them into water instead of sand. There is nothing new about the idea, but I have not seen it anywhere in print, and I know there are not many florists aware of the fact that you never lose a *dracæna* cutting inserted in water, be it a large fleshy top of *D. draco* or the very smallest of the *terminalis* tribe. Whether small bottles are used or large pans, covered with wire screens with half inch or inch meshes, the same result will be obtained. Leave them in the water until roots are well developed and an inch or over long, then pot them, being careful not to break any of the brittle roots and set in a warm place, where they will grow right ahead and do far better than plants rooted at the same time in sand. The propagation may go on anytime in the year with the same success, but in spring and summer months, roots will form in a shorter time than in midwinter, unless you have a very warm house to place your cuttings in.

After the plants have had their first repotting, more light and air should be admitted, especially for colored varieties, which should be grown in full light in order to get the variegation and color out distinctly. Rich sandy loam with a little peat or leaf mould and perfect drainage is essential to the welfare of these plants and I would rather grow them in an outdoor frame during the summer months, than in a close house, unless I wanted some tall plants of the green varieties, which could be hardened off later in the season.

JOHN B. KELLER.

Rochester, N. Y.

Growing Tulip Bulbs.

Mr. Geo. Klehm, Arlington Heights, Ill., a grower of cut flowers for the Chicago market is growing his own tulip bulbs with success, and he thinks he is making a considerable saving over importing them.

GARDENIAS AND ROSES.—Would be pleased to have some of your readers give through the *FLORIST* the requirements necessary for the successful flowering of the gardenia, and the treatment given imported hybrid roses just received, the wood being somewhat shriveled. By so doing you will oblige me and perhaps many other readers of your valuable journal.

R. F. M.

FUCHSIAS.—I have a fine lot of fuchsias in 4 and 5-inch pots that for the past two months have brightened my houses and proved very useful for decorative work. They were struck late last spring, potted into 2½ inch pots and subsequently planted outdoors in a well manured border. We kept the buds picked off until September, when the plants were lifted, potted as above and started to growing for all they were worth. I didn't have over one hundred and fifty this season, next year I hope to have 500 grown in the same way for fall use.

Baltimore.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By a gardener fully competent in propagating and all greenhouse work. Address C. care American Florist, Chicago.

SITUATION WANTED—By a first-class florist as foreman and propagator in commercial place. Address E. E. PARSONS, care Cottage Hotel Kansas City, Mo.

SITUATION WANTED—Any person who is in want of a seedsman or florist, can find one who knows his business, by addressing (stating wages given) ENERGY, care American Florist, Chicago.

SITUATION WANTED As gardener and florist, as first or second man in private place preferred; aged 23; experienced; disengaged Feb. 23. Address H. F. P., American Florist, Chicago.

SITUATION WANTED—As gardener; thoroughly experienced in forcing all kinds of vegetables; capable of taking charge of the best gardens, temperate and willing. Box 3, care American Florist.

SITUATION WANTED—By a first-class gardener (private or commercial); 19 years' experience in all branches of gardening (orchids and roses especially. German, married, no children. Address HANS VON OERTZEN Mont Clair, N.J.

SITUATION WANTED—Commercial establishment or private place in want of competent and acting manager practically posted on all matters pertaining to the business. Address for all particulars A. B., American Florist, Chicago.

SITUATION WANTED—As gardener, private or commercial place. Aged 26; 12 years' experience; German; single; capable of taking charge of first-class greenhouses. Best of references. Address CARL WAGONER, 494 Chestnut St., Harrisburg, Pa.

SITUATION WANTED—By a practical florist gardener; German; single; 7 years in United States. Good propagator; good taste for floral work. Seed trade experience in New York houses. State terms and wages. ERNEST, City Pump House, Cheyenne, Wyoming Ter.

SITUATION WANTED—By a gardener and florist with 22 years' experience in the United States—growing plants and cut flowers. The growing, treatment and propagation of roses a specialty for 8 yrs. in several states. Commercial place preferred. Single; age 42 years. Good references. Address A. GERGEN, florist, care American Employment Co. 79 Beville Street, New Orleans, La.

WANTED—Salesmen. By the oldest, largest and best-known nurseries in the West. Permanent positions; good pay. Outfit free. STARK NURSERIES, Louisiana, Mo.

WANTED—A young man who has had good practical experience in the cut flower business. Must have first class references. Address W. C. Beckert, 47 Federal St., Allegheny City, Pa.

WANTED—To correspond with a young man of good character, that can furnish at least \$1,000, and that knows how to successfully manage the flower and plant business, and is not afraid of work. No others need write. Address OSCAR WRIGHT, Moundsville, W. Va.

WANTED—Practical florist who understands the propagation and growing of bedding plants and roses; who has also had some experience in carpet bedding, and is fully capable of taking charge of three greenhouses. Single man preferred. References required and given. To such an one a permanent situation will be given. Address, stating compensation required. S. S. COHN, Supt Mountain Home Cemetery, Kalamazoo, Mich.

FOR SALE—Floral store. Trade 3 yrs. established, or will accept partner with little capital. Call or address F. W. LOCKYER, 320 31st St., Chicago.

FOR SALE—Two beautiful places in the fruit belt of Northern Texas. One place of 11 acres, with 2000 bearing grape vines, fine house of 6 rooms, wine-house, poultry house, orchard. Price, \$3,500, \$1,500 cash, balance in four annual payments, 6 per cent. The other of 8 acres, 2 squares from court house, house of 6 rooms, up and down stairs, fine peach, apple and plum orchard, with rich black loamy soil; good for florist or nursery business. Never failing water. Price, \$4,000. For more particulars, address P. O. Box 23 Denton, Texas.

FOR SALE.

Florist business in a large and growing city in New York State—Paying and increasing business, valuable real estate—10,000 square feet of glass, thoroughly heated; large stock palms, roses, etc., etc. Satisfactory reasons for selling. A fine opportunity for a young man. Advertiser will take interest as silent partner with responsible party. Terms and particulars upon application to ROSES, care American Florist, Chicago.

WANTED.

About 4,000 feet of SECOND HAND 4-inch Greenhouse Pipe. Send net cash price to

MUSHROOM SPAWN.

Best Mill-truck, Of unsurpassed quality
—FRESHLY IMPORTED.—
Can be thoroughly relied on to produce a fine crop of the best Mushrooms. Our stocks are the largest and freshest in the country. Quality guaranteed the BEST IN THE WORLD. Why spend your money on doubtful quality, when you can get the best at a price that will please you? We sell at rock-bottom prices for first quality spawn.

By mail, post-paid, 22 cts. per pound, Five pounds for \$1.00. By express, Ten pounds for \$1.20, Fifty pounds for \$5. One pound of spawn will plant a space 3 feet by 4. Special prices for LARGE quantities.
21 N. Thirteenth St.,
John Gardiner & Co., Philadelphia, Penna.

New Pure White Tea Rose The "QUEEN."

This splendid new Rose originated with us two years ago, and having proved valuable, is now placed on sale. It is

A PURE WHITE SPORT FROM SOUVENIR D'UN AMI.

A vigorous, healthy grower and continuous bloomer, producing a great abundance of Buds and Flowers all through the season. Flowers are PURE WHITE, showing no trace of Pink, makes good finely formed Buds and is moderately full. Petals are thick and of good substance, opens well, is a good keeper and very sweet. We believe it will prove especially VALUABLE FOR EARLY WINTER FORCING AS WELL AS FOR OPEN GROUND PLANTING, and recommend it for extended trial with the belief that it will be found a valuable acquisition to our list of Pure White Tea Roses.

PRICE: Strong well matured plants from 2 1/2-inch pots, \$3.50 per doz.; \$25.00 per hundred. Two year plants from 5-inch pots, \$9.00 per dozen.

ADDRESS:

THE DINGEE & CONARD CO.,

ROSE GROWERS,

WEST GROVE, PA.

We can now furnish in any quantity desired Debit and Credit Tickets of which we give below samples reduced one-half in size.

DEBIT.			
Jan'y 10 1889			
John Smith			
100	Verbenas	3	—
50	Geranium	4	—
		7	—

CREDIT.			
Jan'y 10 1889

500	4-inch pots	5	—
17 1/2	2 1/2 " "	5	—
		10	—

The debits are printed in black and the credits in red, so they can be readily distinguished. They are put up in blocks of 100; 50 of each, placed back to back; thus but one block will have to be carried. By means of these tickets an entry of a sale or receipt of goods can be made anywhere—in the house or in the field—and afterwards filed. Tickets for each transaction in your business will make data from which a book-keeper can readily work. With this simple and easy means of keeping a record of your business can you afford to neglect so important a matter?

Price of Tickets, postpaid, 100, 20c.; 200, 35c.; 300, 50c.; 500, 75c.; 1000, \$1.40.

AMERICAN FLORIST CO.,

54 La Salle Street, CHICAGO.

Boston.

It is many years since flowers have been so scarce for the holidays as they have been this year.

At the present writing it is too early to give a full report of the state of the market, but from present indications the holiday demand will be much in excess of the supply. This is due principally to the unprecedented season of dark sunless weather. The most surprising thing about it is the quality of the roses, carnations, etc., which have been brought in in such unfavorable weather, for much of the stock that is being received is very fine. Smilax is plenty with but little demand. Adiantum ferns are very scarce and will continue so for some time. Lily of the Valley is somewhat inferior, but on the other hand Roman hyacinths and tulips are unusually good.

In roses the drift of popular favor seems to be toward those varieties of recent introduction, such as the Beauty, Gontier and Bride. There are but few Jacqs in this market as yet, no hybrids and but very few Bennetts. Violets are in short supply and seem to be more popular than ever.

The sale of holly increases here every year. That received this season is of better quality than usual. Mistletoe is to be seen in but few stores, most of the florists having become completely disgusted at the useless condition in which it almost always arrives. Improper packing is the cause of all the trouble.

The Gardeners' and Florists' Club will hold its annual supper in latter part of January.

N. F. McCarthy has been elected to the Boston City Council.

M. H. Norton received a unique and comforting Christmas gift.

E. Sheppard, of Lowell, entertained a number of prominent florists at his home recently.

Fred Mathieson did likewise. The potting shed was supplied with all the appointments of a first class hotel.

David Allau wants to know whether Clematis Davidiana is a new species. S.

Holiday Prices.

I read with interest A. W. M.'s article on this subject and your reply in the December 15 FLORIST. I agree with A. W. M. that flowers should be for sale at such prices that people of moderate means can afford to buy them, and with you that flowers should be sold for all they will bring, as profits are small enough already and holiday seasons too short not to make the best of them.

What the trade needs is a supply of flowers that can be sold at low prices, but at good paying profits to the grower and dealer. Why cannot such flowers as calendulas, bouvardia, etc. be grown in large quantities and offered at prices that

will insure sales to the million? My experience is that people (I am speaking now of the general public) do not so much want roses as they do flowers of any sort that are bright, pretty and low in price. A glance at our flower markets will show that roses, carnations, violets and a few other sorts practically make up all holiday flowers offered; and these flowers are within the reach of comparatively few persons.

As the florist says we want this rose trade and have a right to it at the best profit we can obtain for our goods; but do we not want also the trade of those thousands who will buy fifty cents to one dollar's worth of flowers even if they only get what costs twenty-five cents provided their money will buy a bunch; when they could not afford to purchase three roses for two dollars, even if these same three roses cost the dealer fifty cents each.

What is needed are flowers for all at prices within the reach of all; but all flowers must show a good profit.

Boston, Mass.

M. B. FAXON.

Baltimore Odds and Ends.

One of the most notable events of recent occurrence here, was the banquet at Rennert's hotel, Dec. 6, in honor of Gen. Adam E. King. The decorations were very pretty, about two hundred plants, palms, ferns, etc., were tastefully arranged and formed a perfect forest of foliage. The unoccupied side of a long table was arranged with smilax and roses. A mound three and a half feet in diameter and about four feet in height, stood in front of the presiding officer, the national colors in satin ribbon being fastened at regular intervals around the design and drawn to a point above it; the design was composed chiefly of roses and Roman hyacinths. On the same table there were handsome baskets of Papa Gontiers and Brides. The center of another table was adorned with a balloon of roses between three and four feet in height. There were numerous other baskets of roses, and a couple of tables were decked with chrysanthemums. The chandeliers were handsomely festooned with smilax, and upon the napkin ring of each guest there rested an exquisite Gontier bud. As to the menu—"not knowing we cawn't say."

We were the large and attentive audience the other evening at an impromptu discussion on the airing of greenhouses in winter and it recalled a statement made by President Halliday at a meeting of the florist club, to the effect, that he regarded any man as a lazy man who didn't air his houses more or less every day. The subject is one on which florists hold very different opinions, and some of our best growers regard it as absolute folly to air a house, no matter how hot it gets, if there is a cold wind blowing out doors. Nevertheless we believe that the admis-

sion of a little fresh air every day results in healthier stock. When I took charge here last March, I found the roses badly used up with mildew; every ventilator was securely nailed up, the former superintendent having depended for fresh air on what might penetrate between the glass. My first work was to get the ventilators in working order, and they have been used every day up to date. I soon got rid of the mildew and haven't had a touch of it since. My experience in this case only served to strengthen my previous convictions, that the admission of fresh air to rose houses every day—if only for five minutes—is one of the best preventives in the world for mildew.

Amongst a collection of statice seen recently I particularly noted S. Halfordii and S. profusa. They are both good varieties for fall and winter flowering, the former is the strongest grower, but profusa is the most abundant bloomer, and the best for winter use. The average commercial grower might do worse than handle a few plants of it. Like others of its class it likes a rich, light soil, with plenty of water during the growing season; the temperature of an ordinary greenhouse will be sufficient, but to get them at their best all the varieties should be grown in a temperature of 60° to 70°.

A. W. M.

Postage on Flowers.

The question was asked of Mr. Peter Henderson at the convention in New York if the reduction in postage included all flowers. He replied, "Yes, there is no doubt about it, because the law says 'plants and cuttings,' and you can not make any difference between the flowers and the cuttings." The postmaster here demands the old rate of sixteen cents per pound. How is it in other places?

C. F. G.

MR. ALFRED ANDERSON, Portland, Oregon, sends us a bloom of Souvenir de la Malmaison rose which he states was cut December 1 from a plant budded September 15 last. Mr. Anderson worked twenty-one different varieties of roses on to a wild rose last September. The Malmaison was the first to bloom; the other growths show buds of all sizes, the American Beauty standing second in point of advancement toward blooming. This certainly shows a quick growth from the bud.

OWING TO the illness of our correspondent Mrs. F. A. Benson, her usual letter on floral fashions does not appear in this issue.

THE NEW YORK GRAPHIC for December 19 devotes a full page to views in the greenhouses of the United States Nurseries at Short Hills, N. J.

Carnations.

Mr. Whittle in an article in your last
number claims his new carnations pur-
chased last year were not equal to repre-
sentation. May not soil, location, or
something of that sort have something to
do with his failure? We grow Hize's
White and E. G. Hill to perfection, but
can do nothing with Alegatiere and
Scarlet Gem. Why is it? Can Mr.
Whittle explain? JOHN G. ESLER.

Overhead Heating.

Seeing an article on overhead heating in the last number of the FLORIST I will give my experience in that direction. Our place is heated by steam with pipes below, except in two houses, each 20 x 60 feet, which have all the pipes overhead. In piping the house we used 1½-inch pipes along the ridge of each house to the farther end, then branched and returned under glass on both sides, pipes about ten inches below glass on the sides; used 1-inch pipe for returns. In this way all pipes except the one large one in each house are returns, which all connect and enter the bottom of boiler as one pipe.

We can keep the temperature of these houses regulated better than the others. When the temperature above the benches and about the plants is 55° it is always from 3° to 5° lower under the benches. In these houses we have roses, carnations and general greenhouse stock, and find the plants are about as healthy in these two houses as found anywhere. We also find that it requires but three fourths the amount of fuel, because a smaller number of pipes will do the work. On the coldest night we have had this season, from 8° to 10° above with a strong wind, as we had never tried to see what we really could do we turned on all pipes and with four pounds of steam got the houses up to 80° in less than one hour.

In the two houses we have two pipes each 1½ inches in diameter and eight pipes each one inch in diameter, making ten pipes for a glass surface of 40 x 60. I have heated with all systems of hot water and steam, but find this the most economical and satisfactory that I have yet seen.

JNO. C. NOLAN.

Salina, Kans.

INQUIRER.—To obtain pure whale oil soap apply to any florists' supply house. Tell them you want the pure article and that you are willing to pay what it is worth. We know of no brand which may be relied upon as being absolutely pure. You are near the coast, why not go "whaling" yourself.

THE HELP FOR CUT FLOWER WORKERS AND FLORISTS, FLORAL DESIGNS,

PUBLISHED BY A. BLANC AND J. HORACE McFARLAND,

Has been kindly received, although out but a few weeks. It hits a weak spot, and helps those who sell floral work in many ways. 162 royal octavo pages, including 50 plates of designs, printed in soft tints and rich tones, and a complete treatise on floral work. Send for it, or send for a prospectus if you want to know more about it first. The extracts below show how it has impressed subscribers:

"Cheap at \$5 per copy; to florists in small towns must be very valuable," H. H. HUNTRESS, N. H.
"A book that no local florist ought to be without. * * * Will save me time in selling set pieces." J. FULLER, Mass.

"Well pleased; * * * admire plain English hints upon design work." HUNTS, Pa.
"I find it most satisfactory to show my customers to select from. It is the proper thing in the proper place." J. G. EISELE, Phila.

"Highly creditable to the floral art." J. BREITMEYER & SONS, Detroit.
"For the florist doing a retail cut flower business is almost indispensable, since it illustrates that which cannot well be described. It will help to improve the taste, and give the average florist a source for ideas." E. A. SEIDEWITZ, Maryland.

PRICE, substantially bound in cloth, \$3.50, on receipt of which it will be mailed promptly by
J. HORACE McFARLAND, Harrisburg, Pa.

Set down for FACTS

That these Tools were more popular last year than ever before, and are this year than last. Another Fact. Not one in ten, who ought to own them knows it. Such as do not own them, ask those who do;

and examine them at work, they bear it well. Read our catalogue; it is free and reliable. If you have no use for these Tools, our advice is, do not buy them. S. L. ALLEN & CO. Patentees & Manufs. 129 Catharine St. PHILADELPHIA.

MAMMOTH VERBENA.

GROW VERBENA PLANTS FROM SEED.

A number of leading florists prefer decidedly to grow Verbenas from seed. Seedling plants produce healthier growth and are more easily handled than from cuttings. Our New Crop of

MAMMOTH VERBENA SEED

is now ready, grown from stock seed we saved from named plants procured in 1886 WHICH WE GUARANTEE TRUE. The flowers are of mammoth size and of brilliant colors of all shades, from brilliant scarlet to pure white, showing large contrasting colored eyes.

Choice Mixed Seed . . . trade pkt. 50c.; ¼ oz. \$1.25; ½ oz. \$2; 1 oz. \$4
Smilax Seed, new crop. trade pkt. 50c; 1 oz. \$1.50

HUGHES'

SOLUBLE FIR TREE OIL.

FLORISTS AND NURSERYMEN SHOULD
NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectually all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants: such as ferns, etc., if used as directed. Used as a WASH it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

It kills insect life on man, animal, or plant, without injury to the skin, wherever parasites may appear.

J. W. DUDLEY & SON, Parkersburg, W. Va.

Baltimore.

Our recent chrysanthemum show was a success and the success was entirely the result of excellent management. We don't for a moment mean to disparage the excellent display made by our florists, but we feel like giving "to Cæsar the things that are Cæsar's," and the committee entrusted with the administration of affairs on the above occasion can compliment themselves on the fact that their efforts resulted in one of the most satisfactory meetings held by the Maryland Hort. Society for a long time.

Speaking about exhibitions I am reminded that the plant and fruit show held lately in Wilmington was not quite satisfactory to all concerned. Of the judges selected for that occasion three were from this city; of those three, one was prevented from attending by sickness, the other two got to Wilmington, but two or three hours later one of them was recalled to Baltimore to attend his daughter's death bed; the third remained but during his stay he was not very favorably impressed with Wilmington hospitality. He was not offered the most commonplace civilities and had not only to defray his traveling expenses, but in addition had to furnish his own dinner, supper, etc. It is but fair to assume that this lack of courtesy was not intentional, and if the Wilmington brethren desire to get competent judges for future exhibitions they will guard against a repetition of such discourtesy hereafter. I have the honor of being personally acquainted with the gentleman referred to and I know that it was not a matter of dollars and cents with him; it was not the expense incurred that annoyed him, but the lack of hospitality with which he was treated.

November 29.

NEW BEDDING COLEUS "SUNBEAM."

Bright dazzling pinkish scarlet, edged yellow; medium height, stout jointed, and close blanching. Selected from a large collection of seedlings of 1888. A clump of 25 plants the past season grown with all the old bedding varieties and most of the new, arrested the attention of all who saw it; and the universal verdict was the "brightest and most effective bedder of all." Somewhat dull in winter but all summer brighter than "Queen Victoria," and not stiff and coarse like that variety. Every florist should try it. One plant 25c., 3 for 50c., 8 for \$1, free by mail. Rooted Cuttings of Golden Bedder, Verschaffeltii, Firebrand, J. Goode and 25 other varieties—bedding and fancy—\$1.25 per 100 by mail, \$1.00 by express. Calla Lilies, 20 for \$1.00, \$1.50 per 100 by mail, \$4.00 by express. Address with Registered letter.

R. W. HARGADINE, Felton, Delaware.

WE ARE PLEASED TO RECEIVE VISITORS AT ALL TIMES. TRAINS LEAVE FROM FOOT OF CHRISTOPHER OR BARCLAY STREETS. ONLY 17 MILES FROM NEW YORK VIA DELAWARE, LACKAWANNA & WESTERN RAILROAD.

1,076.

The *Rural New-Yorker's* seedling potato No. 2, will be sent to all yearly subscribers without charge. It yielded in the late celebrated "Potato Contest" at the rate of 1,076 bushels to the acre, the report being sworn to by six well-known judges. This seedling is thought to be the nearest approach to a perfect potato yet produced. The price of the *Rural New Yorker* is \$2.00 a year. It will be sent on a trial trip of 10 weeks for 25 cents in order to show progressive farmers, who do not now read it, that it is the best farm weekly in the world. "It has done more to promote the interests of agriculture in its experiment grounds than all the experiment stations put together." So say the editors of the *New York Times*, *Tribune*, *World*, *Farm Journal*, *Inter Ocean*, etc.; so say all who read it and know. It is pure, sparkling and original. Its illustrations are from nature. It commands the best writers in the world. Subscribe at once. Address the *Rural New Yorker*, 34 Park Row, New York.

Catalogues Again.

It seems to me that among the many good articles that have recently appeared in the *FLORIST*, the one entitled "Catalogue Spelling," in the issue of November 15, deserves more than a passing notice.

It is not necessary that a catalogue be large or full of costly plates; let each one have a catalogue suited to the needs of his business, but make a point of having all names of plants, vegetables and fruits spelled correctly, especially botanical names if they are used. One cause of so many mistakes in spelling arises from our copying names and descriptions from our neighbors' catalogues without stopping to see whether they be right or wrong; in turn our books are copied and so the mistakes continue.

As our yearly catalogue is with most of us our only opportunity of showing our customers what knowledge we possess of horticulture, how absolutely necessary it is to make the best possible impression. If full of staring errors our book goes into the waste basket and our chance of a buyer is lost. If on the other hand our catalogue is compiled with care as regards spelling of names, descriptions, etc., it will at least stand as good a chance as any received, other requirements being equal. A thoughtful buyer will in almost every case give his preference to the man who shows himself to possess the best knowledge of his business, and how can we ever reach this knowledge without being at least well enough acquainted with our goods to spell their names correctly.

"15 YEARS' EXPERIENCE. THE GURNEY SAVES 33% PER CENT IN FUEL."

Letter from Thomas Gray, of Fitchburg, Mass.,
in reference toGURNEY HOT-WATER
HEATER.

FITCHBURG, MASS., April 13, 1888.
Dear Sir:—In answer to yours, asking my
opinion of the Gurney Hot Water Heater
which you sold me, would say that I have
had fifteen years' experience in heating hot
houses by water and must say the Gurney
Heater purchased of you has proved itself
a wonder, both in power and economy,
using one-third less fuel to get same results
than any heater I have ever used. The
brick-lined pot I consider a special feature,
as it renders combustion equal throughout
the entire pot.

Yours truly,
THOMAS GRAY, Florist.

SYRACUSE POTTERY CO.

We must double the sales of 1888, and so we open the New Year by a "DRIVE"
on five sizes for January. No discounts, but we cut the prices on 1 1/4-inch to \$2.40
per 1000; 2 1/8-inch \$2.86; 2 1/2-inch \$3.60; 3-inch and Special 3-inch \$4.50 per 1000.
Our READY PACKED CRATES and the prices per crate, free on board, cash with
order, are figured right down.

The sizes of our pots are stated by the inside diameter as ordered by the Society of
American Florists; and our sizes, 2 1/2 in., 3 in., 3 1/2 in., 4 in., 4 1/2 in., 5 in. and 6 in.
are the STANDARD POTS as ordered by the Committee. They are of the best quality,
and when once used, the prices will sell them.

3,150 1 1/4-inch,	\$7.50	1,300 special 3-in.,	\$5.85	600 4-inch,	\$4.75	160 6-inch,	\$3.50
2,625 2 1/8-inch,	7.50	1,150 3-inch,	5.20	340 4 1/2-inch,	3.90	108 7-inch,	4.00
1,875 2 1/2-inch,	6.75	875 3 1/2-inch,	5.50	320 5-inch,	4.40	60 8-inch,	4.00

We sell only on mail orders and ship safely far West and to the Pacific Coast. Our
frt. rates are very low. Large buyers are invited specially to write to us. We give
samples and will satisfy all. Send for price list and frt. rates. Try us at these prices
before January closes.

J. NEAL PERKINS, Manager, SYRACUSE, N. Y.

THE
Whilldin Pottery Co.

SUMMIT, N. J., October 13th, 1888.

THE WHILLDIN POTTERY CO.,
GENTLEMEN:—At the Convention of the Society of
American Florists, held at New York, Aug. 23d, 1888.
A resolution was offered (and unanimously carried)
that the Florists of America should adopt one
UNIFORM STANDARD Size Flower Pots, and a
Committee was appointed to carry out the sugges-
tions there made. The samples just received from
you and made under the instructions of the Com-
mittee, are the best Flower Pots I have ever seen and
I congratulate you on your success. These Pots have
only to be seen once to be used continually after:
they are light, strong, and well made in every par-
ticular. I have been using your Pots for some years,
considering them the best and cheapest in the mar-
ket, but these new samples are certainly far superior
to any you have previously made.

Yours very truly,
JOHN N. MAY.

Building.

There seems to be considerable diversity of opinion as to the proper pitch for the roofs of greenhouses; also as to the most advantageous distance to place the side bench from the glass where it meets the outside wall. I think many would be glad to hear from practical men upon these points and I am sure that I would.

Walkerton, Ont. WM. RUSSELL.

Double Glass.

This saved me during the severe hail storm early in November. I only had ten lights broken in my two houses, each 100 feet long, while an adjoining house of single glass was quite badly damaged. The hail stones were large as walnuts, the largest ever known here.

Peoria, Ill. JAS. C. MURRAY.

BOILERS.—How many horse power capacity is required in a boiler to heat 1,800 feet 1 1/4-inch pipe with a slow fire? Think I am burning too much fuel.

SOCIETY OF AMERICAN FLORISTS.

JOHN N. MAY, Summit, N. J., president; W. J. PALMER, Buffalo, N. Y., vice-president; WM. J. STEWART, 67 Bromfield St., Boston, Mass., secretary; M. A. HUNT, Terre Haute, Ind., treasurer. The fifth annual meeting at Buffalo, N. Y., August 20, 21, 22, 1889.

THE EXECUTIVE COMMITTEE of the Society of American Florists will be in annual session at Buffalo when this number reaches our readers.

OUR HOLIDAY TRADE report in this issue is, we think, very complete and it should be of great value to the trade. In most instances the reports do not represent the observations of one individual only, as in the majority of cases we have had from one to four reports from different persons in the same city, and the reports presented combine the views and average the various estimates sent us by these different ones. While these reports varied as regards minor items, in nearly every case they were practically unanimous as to the main points involved, such as total volume of trade, quality of flowers and prices. The value of such a report based on such data and carefully compiled can not but be considerable to all interested.

Print your SPRING TRADE LIST in the AMERICAN FLORIST. It will cost you less money and do you more good than to print and mail your list yourself. We will print and mail your list, in the columns of this paper, to 5,000 buyers for much less than the postage alone would cost you. A full page in the FLORIST costs only \$42 for one insertion. It would cost you twice that sum to get up a list of your own and mail it to 5,000 addresses. Think it over! We can save you money and secure you better results at the same time, for the FLORIST is preserved while your trade list otherwise mailed would rarely be kept on file. We will print extra copies for you—from the type after being set—at a nominal rate if you wish extra ones to mail in response to requests. If half a page is large enough it will cost you but \$21 for the service.

THE * HOLIDAY * TRADE.

LITTLE ROCK, ARK.—Holiday trade was good. Roses in great demand. Weather mild and cloudy.

HOLYOKE, MASS.—Larger than last year, quality of flowers better, prices about the same, supply sufficient, more demand for loose flowers.

PROVIDENCE, R. I.—Not so large as last year, quality of flowers not so good, prices about the same, supply short. The demand was for loose flowers.

LAWRENCE, KAN.—Larger than last year, quality of flowers better, prices about the same, with supply insufficient for the demand. Largest call was for loose flowers, with an increased demand for roses.

ST. LOUIS.—Trade larger than last year, quality of flowers better and more of them, supply just about equal to demand. An increased demand was noted for Jacqs and Beauties. Seven-eighths of the call was for loose flowers.

PORTLAND, ME.—Trade about double that of last year, quality of flowers much better, prices realized about one-third higher, supply short. More roses were used than ever before. Call was nearly all for loose flowers this year.

WILMINGTON, DEL.—Larger than last year, quality of flowers generally very poor, prices about the same as last year. Supply about equal to demand. Principal call was for loose flowers. Think that the churches used more flowers than formerly.

ALBANY, N. Y.—There was somewhat of an increase over last year, quality of flowers about equal, prices realized were a little lower, supply not sufficient for the demand. There was an increased demand for Am. Beauty roses. There was less demand for baskets.

NEWARK, N. J.—Trade was a marked increase over last year, quality of flowers much better, especially carnations, prices about the same, supply fully equal to demand. Pinks were in strong demand compared with previous years. Sold more loose flowers than ever before.

GRAND RAPIDS, MICH.—Larger than last year, quality of flowers better and prices about the same. Supply was none too large, demand being largely for roses. Call for loose flowers and baskets was in about same proportion as last year, with a little better demand for good baskets.

CINCINNATI.—Smaller by 20 per cent, quality of flowers better, prices about the same. There was a surplus of all flowers except roses. The demand for roses and

violets showed an increase over last year of about 25 per cent. More call for loose flowers and less for baskets by 50 per cent.

KANSAS CITY, MO.—One fourth larger than last year, flowers of much better quality, prices about the same. Roses sold at \$1.50 to \$2 a dozen, some few sold for \$3 a dozen. Had plenty of flowers; can't sell flowers at fancy prices. No call for baskets, trade all in loose flowers.

OMAHA, NEB.—Larger than last year, and quality of flowers better. For good stock prices were better than last year. More choice flowers could have been sold, the bulk of the demand being for roses. There was less demand for made-up work, the largest call being for loose flowers.

DAVENPORT, IOWA.—Larger than last year, quality of flowers better and better prices realized. Supply not sufficient for the demand, the call being more for loose flowers and less for made-up work. Evidence of a vitiated taste was noted in a call for metal and porcelain flowers and immortelles.

CLEVELAND, O.—Larger than last year, quality better, prices about the same, and supply sufficient for demand. There was an increased call for plants, and carnations being cheaper than roses were more liberally called for. Call for baskets and loose flowers was in about the same proportion as last year.

ST. JOSEPH, MO.—Much larger than last year, and owing to the bright clear weather through December flowers were of better quality. Prices were about the same as last year, supply about one-third short. Rather more demand for baskets. Demand from outlying points was nearly equal to city trade.

SALEM, MASS.—A slight increase over last year, quality of flowers about the same, prices a trifle higher, sufficient supply of stock with the exception of violets. An increased demand for choice roses was noted. The call was almost entirely for loose flowers. Holly and green sold better than ever before.

HARRISBURG, PA.—Trade about equal to last year, quality of flowers better, prices realized about the same. Supply was not quite sufficient for the demand. Carnations, bouvardia and Roman hyacinths sold better than in previous years. Demand for baskets and loose flowers in about same proportions as last year.

NASHVILLE, TENN.—Never before was there such a demand as at Christmas, but unfortunately we can't afford to handle buds, especially Mermets at \$25 to \$35 a hundred, with express charges and the loss of a few buds in each lot in shipping. Were it not for the fact that I am cutting a few buds of my own I would have to close up.

PITTSBURG.—Larger by 25 per cent, quality of flowers about same as previous years except first lots received which had been held by growers and were rather stale, prices a little higher than previous years on some varieties. Supply about equal to demand. The demand for loose flowers exceeded everything; but few baskets were made up.

TOLEDO, O.—Much larger than last year, quality of flowers very much better, prices realized about the same, and supply of flowers good. There was an increased demand for fine buds, violets and lily of the valley. Larger call for loose flowers and less for baskets. There was a demand for a better quality of flowers at an advance in price.

TORONTO, ONT.—Trade about equal to last year, quality of flowers much better, owing probably to the open weather, prices about the same as previous years, supply equal to the demand. There was an increased call for roses. Less call for baskets and more for loose flowers. Palms were more used for decorations where flowers would be too expensive.

LOWELL, MASS.—Trade smaller than last year, quality of flowers poorer, prices about the same, supply short. There was more call for long stem pinks and chrysanthemums. Loose flowers were most in demand. We could have sold more roses but could not afford to buy at the wholesale prices asked, as buyers would not pay a sufficient advance at retail.

DANVILLE, ILL.—The holiday trade in this city was good. The demand for holly far exceeded any previous year, owing to the holly being far superior in quality this year. It found ready sale. White roses were scarce. The local florists were enabled to supply the demand, which was greater than last year. The demand for Christmas trees was never better.

NEW BEDFORD, MASS.—Trade about double that of last year, quality of stock not as good, roses being smaller and of poor color. Prices realized were about one-fourth higher. Not more than half enough flowers to supply the demand. There was an increased call for violets. Larger demand for loose flowers. More fault found with the high prices than formerly.

MILWAUKEE, WIS.—Trade larger than last year, quality of flowers better, prices about one-third higher. With the exception of Romans and valley supply was insufficient for Christmas; for New Year's supply and demand were about even. Call for baskets and loose flowers was in about same proportions as last year. There was noted a growing taste for ferns and other choice foliage plants.

MINNEAPOLIS.—Trade larger than last year, quality of flowers fully equal to previous years, prices higher. Supply sufficient; if prices could have been lower the demand would have exceeded the supply. There was an increased demand for the cheaper flowers. Most of the call was for loose flowers. Christmas trade was good but New Year's trade was nothing to speak of.

COLUMBUS, O.—Larger than last year, quality of flowers better, prices not as high, supply insufficient. There was a greater demand for roses, violets and carnations, but hyacinths, valley, narcissus and tulips were not as popular as last year. Demand was almost entirely

for loose flowers. Call for holly increases every year. Christmas trees were used more than formerly and supply was short.

SPRINGFIELD, MASS.—Larger than last year, quality of flowers about the same, prices better, supply sufficient to meet demand at prices asked. An increased demand was noted for roses (Mermets and Brides in particular), violets, carnations and valley. The bulk of the call was for boxes of loose flowers. There was less sale of the commoner greens and more demand for holly and the better greens.

PHILADELPHIA.—Larger than last year, quality about same as usual, with roses possibly a little poorer, prices realized were about the same as last year. We had a sufficient supply because we procured a large stock from other cities. There seemed to be a greater demand for baskets than usual. We believe the extremely high wholesale prices at the holidays are a great detriment to our business.

ST. PAUL.—Trade less than last year, quality of flowers about the same, prices probably in most instances lower. Supply was sufficient, especially at New Year's when some of us had quite a stock left on our hands. Much less demand for baskets, more for loose flowers. It was noted that instead of leaving orders for flowers a few days in advance customers this year waited till the last day before placing them.

WORCESTER, MASS.—Larger than last year, quality of flowers not as good owing to dull weather, prices realized were higher. Supply was sufficient with the exception of fancy roses and violets. There was an increased demand for fancy roses, an increase in the call for loose flowers and a notable decrease in that for baskets and bouquets. Tulips in pans and Roman hyacinths and freesias in pots sold very readily.

SYRACUSE, N. Y.—About 25 per cent. smaller than last year, quality of flowers about equal, prices of roses about the same but on other flowers considerable less. More than enough flowers to supply the demand, had some to spare. There was an increased demand for carnations and the cheaper flowers and less call for choice roses, etc. The call was almost wholly for loose flowers; the demand for baskets is yearly on the decrease.

TERRE HAUTE, IND.—Trade smaller than last year and quality of flowers not so good on account of so much dark weather. Prices about the same as last year. For Christmas the supply was insufficient, but for New Year's there was an excess, there being but little demand. Call for baskets and loose flowers was in about the same proportion as last year with perhaps a slight falling off in the call for baskets. New Year's trade is diminishing from year to year.

NEW HAVEN, CONN.—About the same as last year. Roses shipped in from the large cities were poor, tulips and lily of the valley poor and poinsettias very poor. Prices realized were generally higher especially for roses and violets. Considering the very high wholesale prices the supply was sufficient. There was more demand for cheap showy flowers and less for large fancy roses. The call was almost entirely for loose long stemmed flowers. The unusual demand for cheaper flowers was especially noticeable.

LOUISVILLE, KY.—Larger than last year, roses not quite up in quality, other

flowers about as usual, prices rather better, roses selling at from \$2 to \$5 a dozen. Supply rather short, flowers have been very scarce the past month. Increased demand for violets and red roses. Call for baskets was about 25 per cent. less but for loose flowers 35 per cent. better. Demand for holly and wreathing was much greater than last year. Many buyers of flowers are becoming very particular and want only the very best.

WASHINGTON, D. C.—Larger at Christmas with a little falling off at New Year's, quality of flowers extra good, prices about the same as usual, supply equal to demand with the exception of violets which were scarce. Among roses an increased demand was noted for Beauties, Gontiers and La France. Valley sold well. There was a decided falling off in the call for baskets with an increase in that for loose flowers in boxes. Good palms and blooming plants sold well.

DETROIT, MICH.—Holiday trade larger than last year. Quality of flowers was good except some of the roses which were not quite as good as last year. Retail prices about the same as last year; carnations brought a little better price. Supply was sufficient except at Christmas when roses were in short supply. Two-thirds of the demand was for loose flowers and bunches. Good demand for wreathing and an extra large call for holly. Retail prices of flowers were one-third less than printed wholesale prices.

RICHMOND, VA.—Trade double that of last year, quality of flowers better, owing to the unusually favorable fall and early winter we have had here, prices realized about the same. Had to rely on our home stock as northern flowers were too high in price to make a profit on. Supply about half enough for the demand. There was an increased demand for potted plants, roses and violets. Immortelle designs sold slow compared with last year. Four-fifths of the call was for loose flowers; less call for baskets every year. New Year's trade was slightly better.

DES MOINES, IOWA.—Larger for Christmas and smaller for New Year's. Home grown stock good; that shipped in was inferior—especially roses. Prices of roses were lower than last year and carnations, hyacinths and smilax were not advanced from usual rates. More good roses and carnations could have been sold; of Roman hyacinths there was plenty. The increased demand was for roses, carnations and hyacinths. But few baskets were wanted, the call being almost entirely for boxes of loose flowers. As none of the "upper ten" received calls on New Year's day, more of the demand was from the "middle class." Good demand for holly. Perles and Niphetos brought \$2.50, LaFrance and Mermet \$3, Romans \$1, and carnations 50 cents a dozen; smilax 40 cents a string.

UTICA, N. Y.—Trade larger than last year. As to quality of flowers, roses, orchids and violets better, while carnations were not quite as good. Choice flowers brought better prices than last year, second quality about the same as before, culls were not wanted. Supply was sufficient for the demand—or nearly so. There was noticed a decrease in the call for Romans, valley and freesias and an increase in that for good roses, violets, orchids, carnations, stevia, etc. Much less basket work, the increase being in boxes of loose flowers, ferns, etc. I noticed that customers delayed placing

SHE RECEIVES THE ROSES.

HE RECEIVES THE BILL.

SUNSHINE AND SHADOW AT CHRISTMAS.

their orders till almost the last day. Although trade may be classed as "good" there is not the usual excitement and bustle generally incidental to this season of the year. The unseasonable weather is probably one cause.

BUFFALO.—Trade about the same as last year, quality of flowers about the same, prices realized averaged about the same, too high at Christmas to do business at legitimate profits and be satisfactory to customers. Supply was sufficient or nearly so for the demand. An increased demand was noted for better quality of carnations, violets and bouvardia; roses held their place. Calls for loose flowers more numerous in proportion than last year. There was an increased call for holly wreaths, loose holly and mistletoe. The disadvantage of wholesale prices being placed unduly high at the start lies in the fact that they frighten off trade. Both the present and last year prices had to take a tumble at the last moment after trade had been already scared off by the high prices and it was too late to make known to buyers that prices had been reduced. Surely this seriously injures trade.

ROCHESTER, N. Y.—Smaller than last year, quality of stock very good, but prices realized lower. Supply was more than sufficient for the demand. There was a decrease in the call for roses owing to the high prices. It is said that growers have to get a big price during the holidays to make up for low rates that prevail during most of the year. It would certainly be better to average the prices more, so that such a great increase at the holidays would not be necessary. It is hard to make customers understand why roses that are sold at \$1 a dozen one week should be worth \$3 a dozen the next week, and the complaints and dissatisfaction that the dealer has to meet in consequence is simply fearful, to say nothing of the loss that is generally sustained through buying roses at from \$10 to \$30 a hundred for ordinary varieties and frequently being obliged to sell them at cost or less. We have always done it but while the cry of hard times lasts we don't want any more Christmas roses.

YOUNGSTOWN, OHIO.—The Christmas trade in cut flowers and church decorations was excellent. It used to be, only a few years ago, that the Episcopal church was the only one to observe Christmas with the decorations of holly, mistletoe and flowers now seen in nearly all denominations; even the Calvinistic churches are following in the same path, and before long every church shall have its Christmas decorations proportioned in extent according to the tastes and purses of its members. The New Year trade was not very large, receptions being out of style curtails the demand for flowers and other decorations. While we have not had much cold weather it has not been very favorable for the production of cut flowers; too many cloudy days during November and December. As a consequence Perles produced a good many "bull heads," and carnations did not attain the size they do with clear sunny days. To all observant florists the effect of a duration of cloudy weather on carnations of all kinds is apparent in the size of the flowers, especially if a high temperature is maintained.

Boston.

Christmas trade was very brisk, the demand for good flowers being considerably in excess of the supply, particularly for lily of the valley, violets, fancy carnations and roses of the choicer kinds. Yet in spite of this scarcity it was a difficult matter to dispose of what is known as "common stuff."

It was formerly the case that when first class goods could not be obtained customers took whatever they could get. Not so now, however, the best or none seems to have become the rule, and so the mildewed, pale colored or aged rose found none so poor as to do it reverence. Stevia looked in vain for a purchaser, and that once useful and salable relic of by-gone days the short-stemmed carnation, although it smiled its sweetest and most seductive smile never left the ice chest until it took its final departure in disgrace for the rubbish box. Smilax, too, was the worst kind of a drug, everybody trying to sell it, but nobody willing to

buy at any price. With Christmas, however, went also the cold weather and a season of sunny springlike days followed resulting in heavy crops of all varieties, and thus for New Year's day the Christmas situation was reversed and stock was plenty and buyers few. For the first week in January prices have been unprecedentedly low on many varieties.

W. J. S.

Baltimore.

The holiday trade in this city was highly satisfactory and decidedly in excess of last season. While an enormous quantity of loose flowers were sold it is probable that the bulk of flowers disposed of at Christmas were worked up into baskets for which there was a brisk demand, bouquets and other designs, however, were rarely called for. There was no marked improvement in house or church decorating; there was an unusual demand for holly and mistletoe, but judging from trade in the past, few of our florists had laid in a large stock of the latter, consequently the supply was hardly equal to the demand.

New Years doesn't generally count for much in this section, but it is conceded that this season was an exception. The New Year's trade was good, confined almost exclusively, however, to loose flowers. Instead of calling on their lady friends as heretofore, it was a fad with our society young men to enclose their cards in boxes of choice flowers, and we most heartily commend this "new departure" as a source of infinite relief to the ladies and profit to the trade. The plant trade was excellent throughout, indeed one of our oldest florists told me that the plant trade this season was the best he had ever known in Baltimore, and I doubt if Baltimoreans ever found better stock to select from.

Prices generally were good. American Beauties sold at \$15 per dozen, La France \$5 and \$6, Mermets and Perles \$4, \$5 and \$6, Lily of the Valley \$2 and \$3, Romans and narcissus \$1.50 and \$2, tulips \$1.50, carnations 75 cents to \$1, violets \$3 per hundred.

We took special pains this season to get at "the hang of things," and it is very gratifying to be able to record such a healthy condition of trade. The marked improvement over former years tends not only to show an increase of public taste, but serves to demonstrate the fact that our florists are getting abreast of the times and are beginning to realize that a little cultural carelessness brings its reward.

January 2.

A. W. M.

Chicago.

Leading down town florists report an increase of from 25 to 50 per cent in their holiday trade over that of last year. The quality of flowers on the market was about equal to last year, though in some cases quality was a trifle below the standard. There is some complaint against growers who brought in large quantities of "salted" stock, some of which had been "salted" so long that it was practically worthless.

Prices were higher than last year, and the supply was practically sufficient at the prices it was necessary for the dealer to obtain in order to come out on the right side. Some florists noted an increased demand for Beauties, Contiers and Brides among roses, and others noted an increased call for fancy carnations and other cheaper flowers owing to the

high prices placed on roses. One dealer reports that prices on roses and violets were so high that he could not sell them.

At Christmas the call was almost entirely for boxes of loose flowers, the call for baskets being even less than last year, but for New Year's two florists report quite a considerable call for made up work, more than for several years past. Other dealers report New Year's trade as about equal to last year, while some say that the day before New Year's was very dull, one describing it as a veritable "Blue Monday."

A feature noted by one dealer was that nearly all buyers of loose flowers ordered them to be all of same color, and very few mixtures of varieties were called for. Another florist reports that his Christmas trade was about the same as last year, but that it was less in cut flowers, this decrease being made up by an extra demand for plants.

Retail prices per dozen were as follows: Bon Silenes \$2 to \$3; Perles and Niphetos \$3 to \$4; Mermets \$4 to \$8; La France \$5 to \$7; Bennets \$5 to \$6; Gontiers \$4; Am. Beauties \$12 to \$24; Jacqs \$12 to \$24; long stem white carnations 75 cents; long stem colored carnations \$1 to \$1.50; Roman hyacinths \$1 to \$1.50; narcissus \$1.25 to \$1.50; tulips \$2; violets \$1 for bunch of 25 blooms, \$1.50 for bunch of 35, and \$2 for bunch of 50.

Holly and green sold well and total sales far exceeded those of previous years.

The banner sale of roses was a box of five dozen at \$50 for the box. It contained two dozen Am. Beauties at \$20 a dozen, two dozen Brides at \$8 a dozen, and one dozen Jacqs at \$24 a dozen. The florist who made the sale said himself that it was certainly robbery to charge such prices, but the buyer wanted them extra choice regardless of expense, and as it was he only made a fair profit after buying the roses at the prices demanded by the grower.

Several of the young men who collect the bills for the florists by whom they are employed threaten to resign. They state that they had rather meet Sullivan than present a bill to those customers who simply dropped in and ordered "three or five dozen of choice roses sent up to the house for Christmas" without inquiring the price. One collector remarked that if ugly looks could kill he would have died a hundred deaths since Christmas.

Philadelphia.

It is very gratifying to all concerned to be able to report an increase in the Christmas trade here when it is understood that we have made a similar report for some years past. The quality of the flowers was fully equal to that of former years. The prices realized by the grower were a trifle lower than last year, though there was no appreciable difference in first class stuff. The retail prices were about the same as for the past few years.

Owing to the delightful weather which prevailed during and immediately preceding Christmas, flowers were quite plentiful, especially carnations. La France among roses was the most scarce; nor were Beauties of first class quality any too abundant. There was no run on any particular flower or class of flowers. The salesman with the necessary amount of tact could generally persuade his particular customer to take whatever he recommended.

In some quarters there was a noticeable increase in the demand for baskets or

other designs without any effort of the dealer, whereas in others it was about the same as for the past year or two.

The great increase of prices as boomed by the grower and commission men was condemned unqualifiedly by the dealer. And the practice of holding flowers for these higher prices was equally as vigorously condemned. The dealer is so busy at this time that it is impossible for him or his assistants to watch closely the class of flowers left on these great occasions, and it is not until the flowers are brought into use that the poor quality is noticed. At that time it is difficult to place the blame where it belongs. And another evil which this plan of holding flowers for a week or ten days develops, is that the dealer finds it very difficult to obtain as many flowers as he could use to advantage for his regular trade during the few days before Christmas.

To the above complaints the grower thus retaliates: All through the fall and early winter prices are so low that sufficient cash is not realized in many instances from sales made as to meet current expenses. These matters are regulated by supply and demand; the dealer will buy just as low as he possibly can when trade is dull and flowers are plentiful, and the grower will charge as much as he possibly can when the demand is heavy and the supply is comparatively light. Then says the retailer as a parting shot, these high prices at the holidays injures trade for the future when the best and choicest flowers are in most demand.

There is a great deal could be said pro. and con. on both sides of that question, but at the present writing there seems to be no practical way of solving the question, or out of the difficulty. One dealer says somewhat sharply: "It will solve itself in time."

Rose crops are the most difficult to control. The cheaper classes of flowers can be had in greater abundance, but these bring much extra work to the grower and retailer, especially the latter, at the time when, with the limited skilled assistance, that each dealer can command at this season, it is a question whether it would pay to encourage it at present.

The trade at New Year's which had been gradually but surely declining for several years, has this year surprised most of the florists by a change for the better. Let us hope that it may continue. Smilax is very plentiful, and so also are adiantum fronds. The latter are almost daily increasing in popularity. Excuse this hurriedly prepared report. And wishing the FLORIST and all its readers a prosperous New Year, I am yours truly,

E. L.

New York.

Christmas was fairly good for the florists this year; New Year's day very poor—in fact, the commission men say that at this holiday there was no increase over an ordinary day. It is entirely going out of date as a fete day; consequently there is no special demand for flowers. Quite a number of growers lost through the foolish practice of holding back for the holidays; as one big commission man said, they would realize better prices by sending in stuff fresh day by day than by rushing in a quantity of held back flowers the day before a holiday. These back number roses are pretty sure to find their way into the ash barrel. A small percentage of held-back flowers in a lot lowers the grade of the entire number, and

consequently lowers the price, even if it does not render them unsalable.

Very few Jacqueminots were in, and, for the most part, these were poor in quality. Surprisingly few Jacqs. are now grown, in comparison with former years, and they are rarely of high quality. Many declare that this rose does not really pay, when forced for the holiday trade; certainly they don't bring the price they once did. It seems as if the Bennett has rather superseded it in public favor.

Taken on the whole, the flowers sent in for the holidays were of a very high order of excellence; this is now imperatively demanded by the city trade. It is not sufficient for a rose to be a fine variety; it must be a fine specimen of the variety.

Prices did not vary greatly from those of last year. At Christmas, roses were as follows per hundred: Bon Silene \$6 to \$10; Papa Gontier \$12 to \$15; Ierle des Jardins the same; Niphetos \$8 to \$22; Mermets \$20 to \$30; Cusin \$20 to \$25; Duke of Connaught \$10; La France \$20 to \$30; Bennett \$15 to \$25; Am. Beauty \$50 to \$150; Jacqueminot \$35; hybrids \$50 to \$75.

It will be noted that the general average is about the same as last year. Papa Gontier almost doubles Bon Silene, and yet the commission men complain of it; they say it does not stay fresh-looking as long as the Bon, being more liable to turn blue.

At New Year's, roses were decidedly lower. Both Bons. and Gontiers ranged from \$6 to \$8 per hundred; Perle des Jardins the same; Niphetos \$6 to \$10; Souv. d'un Ami \$6 to \$8. Mermets were divided into half a dozen grades, selling all the way from \$8 to \$25 per hundred; Cusin \$12 to \$15 and \$25; Bride \$15 to \$25; Beauty, all the way from \$15 to \$75; Jacqs. \$35 to \$50; Magna Charta \$50 to \$75.

There were a good many poor Beauties; very good Magnas and Anna Alexieff. Fine Ulrich Brunner, and, about New Year's, beautiful Gabriel Luizet.

A great many carnations were held back; consequently they did not bring large prices. At Christmas, long stemmed \$3 to \$4 per hundred; short \$2. At New Year's, long stemmed \$1 to \$3; short unsalable. Bulbs were about the same at both holidays. Hyacinths, \$4 per hundred; tulips \$4; narcissus \$5; lily of the valley \$6 to \$8; lilies \$1.50 a bunch; violets \$1.50, \$2 and \$2.50; smilax 20 cents; mignonette 50 cents to \$1.50 per hundred.

Quite a lot of cypripediums and cattleyas were sent in by various growers; they seem about the most salable orchids. They are usually sold by the box, so much for the lot but the commission men do not seem very anxious to handle them. De Forest sends in a lot; J. H. Taylor grows fine cypripediums; Welch of Riverdale, sends in assorted cool house orchids, and many others send in odontoglossos and cattleyas.

Japan Quince (Cydonia Japonica), both red and white, was forced beautifully by Bird of Arlington Heights, (Newark), and by Siebrecht & Wadley. It is quite as easily grown as lilac.

A tremendous quantity of green was sold by the florists, only they draw the line at Christmas trees, which are now sold almost entirely by down town marketmen and street vendors. There was a lot of very good holly in, among it that from J. C. Vaughan of Chicago; the small trees imported by a few florists were noticeable as a rule for good foliage and plump berries. Among these trees

ERICA WILMOREANA.

were charming varieties with variegated leaves and golden berries.

Mistletoe was, on the whole, a failure, through being improperly packed. The berries were usually all gone, forming a slimy mass in the bottom of the crate, and the leaves dropped also. "Colorado needle pines" sold well, and was a popular green.

It is the general opinion that the New Year's prices would have been better had the weather turned cold, but two weeks of unseasonable warmth hurt the trade very materially. A great many growers were off crop, but there was no scarcity of flowers through the large increase in glass. There was a large demand for loose flowers.

EMILY LOUISE TAPLIN.

Christmas Flowers at Covent Garden Market, London, England.

There can be no question as to the popularity of white flowers—not only at Christmas, but at almost any time of the

year. They seem, however, to preponderate in winter, owing, no doubt, to the fact that they pay better for production. Colored flowers are, however, tolerably plentiful, but it is evident, from the treatment they receive, that they are only considered of second rate value.

Prominent among white kinds are camellias, eucharis, gardenias, Richardia africana or Trumpet lily and chrysanthemums, both incurved and Japanese, the latter being abundant during the early and latter part of the season, when incurved sorts are anything but plentiful. Over and above these, however, are a large number of subjects which appear in quantity at times, but are more or less intermittent, each according to its particular season. Paper White narcissus, Roman hyacinths, double white Chinese primulas, and bouvardias may, however, be had in considerable quantity at present, and the supply will continue for many weeks. The same might be said of white azaleas and lily of the valley. Strangely enough, Christmas

roses are not so plentiful as one would be led to expect, especially after a long spell of unusually mild weather for November and December. Roses are nearly always plentiful, but the greater bulk of them at present consist of blush-colored, pink, pale rose, or salmon yellow tea-scented kinds. White varieties are not particularly numerous. *Lilium longifolium*, or its variety, *L. l. Harrisii*, is even already to the front and may be had nearly at any season.

For ordinary bouquet work a great variety of the commoner differently colored flowers are used, such as chrysanthemums (Japanese and Pompon), yellow roses, Christmas roses, scarlet pelargoniums, blue, yellow and purple pansies, recalling the recent mild weather, *Polyanthus narcissus* and similar subjects. The burst fruits of *Iris foetidissima*, exposing the globular scarlet seeds, are very ornamental and the plant might be more frequently grown in shrubberies and woodlands for this purpose than is at present the case. Unlike the common yellow iris, it prefers a dry and chalky soil, although the latter condition is not absolutely essential. The flowers used for button-hole bouquets are roses of various colors in the bud stage, carnations, gardenias, eucharis, *Lilium speciosum album*, double blue violets and primroses of the common yellow wild type.

Orchids are not particularly plentiful, but there is a tolerably good sprinkling of *Odontoglossum crispum*, *Oncidium crispum*, *O. Papilio* used for button-holes, for which it seems wonderfully well adapted; *Cypripedium insigne*, *Calanthe Veitchii superba*, *Dendrobium nobile* and *Zygopetalum Mackayi*. Among these the *cypripediums* are, perhaps, the most plentiful, while the *calanthes* are also pretty numerous and also tolerably well colored.

Pot plants are by no means so plentiful as we have seen them, but conifers, aucubas and *Erica hyemalis*, together with *Cyperus alternifolius* and ferns may easily be had. Duc van Thol tulips in various colors are also commencing to put in an appearance.—*Gardening World* December 22.

Erica Wilmoreana.

We present herewith an illustration of a blooming plant of this heath which has so frequently been favorably mentioned as a valuable variety for pot plants and for the production of cut blooms. The graceful spikes of bloom are very beautiful and meet with ready sale, and it is to be regretted that such an acceptable addition to our list of cut flowers as heaths would be is not made by growers of cut flowers.

The reason is found in the fact that few growers have success in flowering heaths in this country. Growers state that all the heaths are plants that dislike either a very high or very low temperature and with the sudden changes of temperature encountered in this climate it is impossible to give them the equable temperature necessary to their well being.

But as an offset to this several growers have been successful and they are loud in their praises of heaths for cut flowers. Mr. John G. Gardner, gardener for Pierre Lorillard, Jobstown, N. J., grows *Erica Wilmoreana* well, and while he is not a commercial grower, from his experience he believes that this heath can be made to produce flowers in quantity and at a profit to the grower. In our issue for April 15, 1887, we printed a description

of Mr. Gardner's method of treating heaths.

We believe that if two or three men can successfully grow heaths in this climate others can do the same. There is always more profit in growing something that the majority are unsuccessful with, and we believe that it would be worth the while of *thorough going, careful* growers, near large cities, to give Erica Wilmoreana a systematic trial.

Mushrooms in Greenhouses.

It is now midwinter and our cut flower business is at its height, and we exercise ourselves to make as much money out of our greenhouses as we possibly can. This is right. Our greenhouses are pretty well crowded and we do not clearly see our way to introduce anything else. No place is empty. Under the benches we have lots of room, but beyond being a store place for canna, dahlia and other roots at rest we do not occupy the space. True we could grow rhubarb, asparagus and seakale there but this would necessitate growing these plants out of doors in summer and using a good deal of land that we could not well spare; besides, they are a bulky crop, and not always profitable.

But underneath our greenhouse benches is just the place for mushrooms. They are not a bulky crop, and a good sale for them at a good price is assured for all we can raise, for the supply has never been nearly equal to the demand.

In growing mushrooms for profit we have got to produce them as cheaply as possible. Don't make them the primary but rather the subsidiary crop. If the crop turns out good it is nearly all profit; if it is a complete failure, nothing is lost except the labor and the spawn, and it must be a bad failure that won't pay for them. The greenhouse room and heat we need not include in the cost, for, if the space was not used for mushrooms probably we would not use it at all. The loam and manure we need anyway and it is just as good for potting purposes—better for young stock—after having been used in the mushroom beds as it was before.

In order to grow mushrooms successfully we must handle them intelligently and carefully; it is no use to make the beds under our benches and then destroy them with water. Well, considering that they are under the benches and that we are continually watering the plants overhead and splashing water about the greenhouse with the hose, how are we to avoid wetting our mushroom beds? Easy enough. Right out there stacked up in the shed we have any amount of hotheaded sashes, and as we don't want them for anything else during the winter months and as we cannot have anything better for protecting our mushroom beds we may just as well use them for this purpose.

What about the frame on which to rest the sashes? We don't want a close frame in a warm house, but if we should, two rough hemlock boards along the back and one board in front will give us frame enough. We don't need rafters. It is only a temporary affair anyway and the simpler we make it the better for ourselves and the mushrooms too. Mr. Gardner of Jobstown has range after range of mushroom frames inside his peach houses and vegetable houses and in bearing now.

But what about suitable manure? Don't let that be a bugaboo. You want horse manure and pretty fresh if you can get it. But it doesn't matter whether the horses

had been bedded with hay, straw, cornstalks, or sawdust; and mule manure is just as good as horse manure.

It is too late now to think of making up some beds for this season's work, because mushrooms really are a winter crop, and it takes at the least two months' time from when you get the manure till you gather the first mushroom; indeed it oftener is three months.

The proper time to begin is August, September or October, with successional beds in November and December; this will give us an unbroken supply from the end of October till the end of April.

But you can think over these matters now. Go into your greenhouses and see how much empty space you now have under the benches and which might be devoted to mushroom growing as well as not. I presume you want to make some money? Well, if you do, why throw away this golden opportunity? Mushrooms are worth a dollar a pound wholesale and the supply has never been anything like equal to the demand. It is a mighty poor bed that won't give you four or five pounds of mushrooms a day. Now don't you think \$5 a day for mushrooms during the winter months would come in nice and handy? Then why don't you get it?

Don't go into the business with a rush; get into the hang of it first by trying it on a small scale. The long Island market gardeners are going into mushroom growing at an immense rate. In their business, times have changed from what they used to be some years ago before they had to buck against southern competition, and in order to save themselves they are compelled to take a fresh line in their business. They see a bonanza in mushrooms. This is nothing new. Some of them have been growing mushrooms on a large scale for over a dozen years, but, oh, how carefully they do guard this mushroom business from one another and the outside world. Let me give you an instance: About a month ago I called upon the largest mushroom grower (A) on Long Island. He showed me all around his place except where he grew his mushrooms. I made some remarks about mushrooms but he answered me most evasively—he wouldn't even talk upon the subject. Half a mile distant is his next neighbor (B) who also has a very large truck farm and immense ranges of vegetable growing greenhouses. He had been born and brought up in this place and lived neighbor to A all his life-time and they were on good terms and he has never yet seen inside of A's mushroom-growing houses or cellars. But no matter, although he never has seen a mushroom grown he is now erecting large buildings expressly for mushrooms and is going into the business. There isn't as much money in salad in winter as there used to be he said, and if his neighbors can make such a pile of money out of mushrooms he cannot see why he shouldn't do so too; anyway he is going to try, and is willing to pay for experience. Some two or three miles further on is another mushroom grower. Last year he raised and sold 1,700 pounds of mushrooms; the year before that he raised 2,200 pounds, but he hasn't a greenhouse at all, he grows his in cellars altogether. When we called on him, I told him we came purposely to see his mushrooms and as I was a large grower myself he needn't bother with any mumness or secrecy. After having satisfied himself on this score we found him a mighty nice man, and he explained his ways and showed us everything.

Now all this secrecy means just this: There is a little bonanza in mushrooms. Those who have "caught on" are scared half out of their wits for fear some other fellow catches on too. And if they didn't make money, and big money too out of it, they'd pitch it overboard quick.

I myself never had finer mushrooms nor such an abundance of them as I have this year. And I can assure you there is no secret at all in growing mushrooms; you just want to know the general routine of cultivation and attend to the same intelligently and earnestly; but if you don't do this, then let mushroom growing alone. WM. FALCONER.

Glen Cove, N. Y.

A Carnation Disease. Early in November diseased carnation leaves were received by the AM. FLORIST from Mr. Sewall Fisher of Framingham, Mass.

Many were discolored and often wilted and had lost all their power to be serviceable to the plant as foliage. Others were discolored only in one large round spot, the rest of the leaf remaining green. The spots, often extending across the middle of the leaf, were light brown, studded on both surfaces with numerous black specks and surrounded by a differently colored and slightly raised border. The portion of the leaf occupied by the spot was evidently dead.

Under date of Nov. 16, Mr. Fisher writes in reply to a letter from me: "The disease on carnation leaves seemed to develop itself during the very damp weather in October and the dead leaves are a sorry sight to me. Since I have commenced steady firing it has abated somewhat. I can find a good many like the freshest, but the greater part are dead, as you will see. I am very glad to know that it is a fungus and not a 'disease of the tissues,' as one expressed it."

A microscopic examination showed not only that a fungus was the source of the trouble but that in the discolored orbicular spots there was little but fungus. In a thin section cut through one of the spots nothing could be distinguished of the original leaf tissue but the epidermis and the spirally marked fibers which constitute the veins of the leaf. All the pulp of the leaf was destroyed, or its remnant was obscured by the abundance of fungal tissue. Fig. 1 shows one of the fresher leaves with a spot in the middle. Fig. 2 is a diagram made from a section through the spot. The fungal tissue was so intricately interwoven that it could be represented only with great difficulty. The two lines *a* and *b* mark the leaf surfaces and *c* the vein in the midst of the leaf tissue. The spheroidal bodies are the reproductive organs of the fungus. The space around them was occupied by the filamentous mycelium. The number of reproductive organs in this particular section was somewhat above the average. In a line a little more than twice as long as the thickness of the leaf there are five. They are the black specks which are seen on the spots with the naked eye. They are asexual

in their nature and are simply conceptacles which contain the spores. Some have not yet opened, others are discharging some of their spores. Fig. 3 shows more highly magnified an isolated conceptacle discharging its spores. A cut through one of these shows it to be lined with short spore-bearing threads, (Fig. 4) each of which bears a spore at its tip. In this case the mouth of the conceptacle is

Fig. 1—A diseased carnation leaf, natural size.

wide open and all the spores have become detached. The spores still more highly magnified are shown in Fig. 5. They are colorless bodies, usually curved, with thin walls and often containing nuclear globules. Some appeared to be septate, but this could rarely be made out. The length of the spores is from twelve to eighteen ten-thousandths of an inch and the width less than two ten-thousandths.

A comparison with scientific descriptions and accurately named specimens showed the fungus to be *Septoria Dianthi*, Desm. It has been found in Italy, France, Portugal and Siberia, but has been reported only once heretofore in America, at Buffalo, N. Y. (Day's Cat. p. 137).

A black mold was also found on some of the withered leaves, where it had evidently established itself after the *septoria* had killed the leaf.

Fig. 2—A diagrammatic drawing of a cross section of the leaf, showing the conceptacles of *Septoria Dianthi*, Desm; magnified 50 diam.

There is no cure for a leaf already diseased, for the fungus is beyond the reach of anything that will not also destroy the leaves. But experiments to check its spread are worthy of trial. The mode of growth is similar to that of the black rot of grapes and remedies suitable to that, as described by Profs. F. L. Scribner and P. Viala, (Dept. Agri. Bot. Div. Bull. No. 7, 1888, p. 25), should be adaptable to this. To remove the diseased leaves and destroy them will

probably be a great help. Drops of water on the leaves are favorable to the germination of the spores; and one should look for beneficial results from watering the pots directly without sprinkling the leaves and from keeping the plants in a comparatively dry atmosphere. Mr. Fisher's experience favors this view.

It is stated that the spores of the black rot will not germinate in even a weak solution of copper sulphate. The latter is valuable as a preventive, but hardly as a cure, so that it should be applied as soon as there is the first sign of the disease or any reason to suspect an outbreak. The addition of lime to the solution is also suggested and the proportions recommended are six pounds each of copper sulphate and lime to twenty-two gallons of water. A. B. SEYMOUR.

Cambridge, Mass.

Notes on Carnations.

The explanation that Mr. Esler desires is a difficult one and rather beyond my power to give satisfactorily.

It is a known fact that varieties have varying degrees of excellence in different localities, and that the plant our neighbor brings to perfection will, under our care and with precisely the same treatment, frequently be a complete failure. Why this should be is a question for science to answer; and scientific attainments, alas! are not, as yet, found on the roll of a florist's qualifications.

Fig. 3—An isolated conceptacle from which spores are escaping; magnified 127 diam.

That the right environment is essential to the welfare of a plant we shall all agree; not only the atmosphere, but the soil also must be of fitting condition to ensure excellence. If we were students of biology and could ascertain with more precision the parentage of varieties that come under our care and also the various conditions of their growth, we could determine with more certainty the causes of disease and the chances for improvement.

What a field for study and observation does our profession offer. New questions are continually arising for our solution. The experience of years, combined with a sincere love for plants, does not prevent continual perplexity as we see plants which we have successfully grown in the past, succumb to diseases for which we have no known remedy. Just as Mr. May says no written testimony can be taken as an infallible guide, but every grower must observe and decide for himself.

Undoubtedly the character of our carnations for winter blooming purposes is influenced largely by the soil in which they are grown. The fact has been demonstrated to my complete satisfaction too many times for me to doubt it for a moment. Varieties planted in light soil and of superior merit generally have proven complete failures when grown

upon the soil at my disposal—a stiff clayey loam; and *vice versa*. With Snowden successful results have never been attained here, the same with Andalusia; yet on the sandy soil of Long Island, I have often seen these varieties in superb condition. Buttercup has always grown and flowered well here until this year, but on every light soil this variety has not been observed in good form.

Fig. 4
X 127

Fig. 4—Diagrammatic drawing of cross section of conceptacle showing the filaments which line it and to whose tips the spores are attached till maturity; magnified 127 diam.

For some unaccountable reason, not yet decisively apparent, both Peerless and Buttercup are this winter diseased to a very great extent with us. The late summer and early fall was a very wet season in this section and as the soil is so retentive of moisture disease may be attributed principally to this cause. When the carnations were planted in the greenhouse in the fall of 1887 the soil that was used on the benches was some that had been prepared a few weeks previously, by thoroughly burning freshly gathered sod. This was an experiment and the idea was that by using soil prepared in this manner, the adhesive nature of this loam would be rendered more porous, and water could be used freely through the winter. The result was quite satisfactory and the resolution was formed to continue the practice, for roses as well as carnations. But like many other resolutions which we are

Fig. 5
X 225.

Fig. 5—Spores, some of them containing nucleus-like globules; magnified 225 diam.

continually making, this one also, was—owing to pressure of work—never carried out this year. Whether, if soil of this nature had been used disease would have been prevented, it is beyond me to say, but there is much regret because of the omission. Any one with a stiff soil, incorporating with it some that has been thoroughly burned, will be surprised at the results, supposing that the practice is a new one with them.

The white carnation, of which mention was made in a previous issue, has not shown with me one single good point. It is shy of blooming, dwarf in growth,

and what flowers do appear are flimsy in texture and the calyx also bursts. It hardly seems possible that soil or locality could influence this variety in any marked degree towards superiority. Not one cutting will be propagated from it for any further trial. The variety "Glowing Coal" was condemned, not because of its inferiority, but for the reason that it was recommended as being of higher grade than Portia, when it is really Portia, but sent out under another name.

Within the last few days I was pleased to receive by mail blooms of two new white varieties of carnations, "Wm. Swayne" and "L. L. Lamborn." These specimen flowers were of good size and substance and appeared to be all that is desirable for a white carnation. Not having yet grown these two kinds nothing further can be said now as to their merits, but it appears just to mention this incident, for any new white carnation superior to those we now have would be a welcome boon to the trade. Each one of us is always ready to buy a good thing; what we deprecate with energy is the sending out new varieties with glowing descriptions that are well known by the raisers to be no better, and perhaps inferior to those already in the hands of growers. ALFRED E. WHITTLE.

Albany, N. Y.

Notes on Carnations.

I am glad to see that carnation culture is receiving more attention from your correspondents, for the growing of carnations must directly or indirectly affect nearly every florist in the land.

I have been both interested in and profited by what has been written on this subject and give below a little of our experience with the different varieties, giving some of the conditions under which they were grown. Our soil is light and porous, rather sandy, having no clay, but rich in vegetable matter, being part of a reclaimed swamp. Situated as we are on the eastern shore of Lake Michigan, both the intense heat of summer and the extreme cold of winter are greatly modified by the water. This we think is quite favorable to carnation culture.

We quite agree with Mr. Esler in the last issue of the *FLORIST*, page 235, in thinking that soil, climate, etc. may greatly affect certain varieties and noticed that his experience coincided with ours in many respects. We have this year for the growing of cut flowers in winter and for furnishing stock for young plants something over 10,500 plants, about one third of which are Snowdons, one third Hinze's White, and the remainder consists of about fifty of the new and standard varieties.

Snowdon is the most prolific early variety we have, pure white and dwarf in habit, though the flowers are short-stemmed and rather small. Hinze's White with us, as in most localities, is regarded as the best white for all purposes, though its place of honor is likely to be contested by some of the new varieties, among which are Silver Spray, medium height with large pure white blossoms on remarkably long and strong stems, L. L. Lamborn, a dwarf variety, very productive and particularly large blossoms, Wm. Swayne, robust habit, creamy white, large and double, and Daisy, very early and productive, flowers not quite so large but very double and borne on long stems. With us these all show so many good qualities as to make them worthy of a thorough trial, and they are

so different that one variety will not take the place of any of the others. They are all very fragrant, but each has its own peculiar fragrance.

Orient and Anna Webb are very similar in color, size and form of blossom, but a large per cent. do not open out perfectly, and those that do are not good keepers. Emperor of Morocco is the deepest crimson, blossoms very large and double and will last a long time either before or after picking, splendid habit and very productive. American Florist is very similar to Sunrise in color though much superior in habit and productiveness and is very fragrant. Florence is a light scarlet free and large, very promising. Paxton, white penciled with scarlet is very good with us, quite similar to Chester Pride, but healthier and more productive. Starlight, our own production, takes the lead in this vicinity; its clear pale yellow making it a favorite with the ladies while it is not so deep a color as to make it objectionable in cut flower work. Here it is early and unsurpassed in productiveness. E. G. Hill is a splendid carnation and if one has it and President Garfield he will need no other bright scarlet. Silver Lake is a fine variety, but not very double. Jeanette is a very promising white, good habit and very productive.

Alegatiere makes good growth and forms very many fine buds, but I have yet to see the first perfect blossom this season. We are sorry to say our experience is totally different from that of Mr. Towell given on page 232 of the *FLORIST* though it has had an equal chance with the rest. Scarlet Gem also forms quantities of buds, but scarcely one tenth of them produce perfect blossoms and our experience with White Gem is essentially the same.

I will not take space to refer to any other varieties, though we have many possessing valuable characteristics. As we have been benefitted by what others have written we hope this may prove profitable to some of your readers.

Grand Haven, Mich.

J. G. H.

Sample Carnation Blooms.

Mr. Geo. Hancock, Grand Haven, Mich., sends us blooms of Florence, a little lighter in shade than E. G. Hill and an excellent flower; Emperor of Morocco, a fine dark crimson; E. G. Hill, the well known scarlet, but in the flowers sent there were traces of white markings on some of the petals, which we have not before noted on this variety; Anna Webb, the now well known crimson; Starlight, a good light yellow which we understand originated with Mr. Hancock; Paxton, white penciled with scarlet, pretty flower, but of doubtful value as a cut flower; Amy Phipps, in the way of Buttercup, but hardly superior to that variety; Daisy, a good white, but not equal to other good whites now in the market; one labeled "our new seedling," white shaded with scarlet, a pretty combination, but flower rather small and not very full; Silver Spray, Wm. Swayne and L. L. Lamborn, the new whites, all good; Swayne has the most substance, Lamborn is the clearest white, Silver Spray has a good degree of both of these valuable characteristics and the specimens sent were on fine long stems.

We are inclined to believe that the comparative value of these three white carnations will be largely decided by locality. If you need a new white carnation try all three in small numbers, and eventually put in a full stock of the

one that does best with you and best answers the requirements of your market.

Hinze's White.

There seems to be a divided opinion among us as to the merits and demerits of this carnation; caused no doubt by the difference in soils and the methods of handling it.

To have it in perfection, they should be planted in a rose house, (that is two-thirds slope to the south and one-third to the north) provided with plenty of ventilation. In a house of this kind you will get pure white flowers and plenty of them from Dec. 1 to July 1. There will of course be some blooms before Dec. 1, but not in quantity. It is a rank feeder and can be manured heavier than most varieties and will repay you with blooms averaging three inches in diameter. Most of mine are planted in solid beds, these are about two weeks later the season through than those on benches, otherwise I can see no difference.

I would like to say how many blooms I cut from a bed 100 feet by 9 feet last season, but I gave the figures to several brother florists at the convention and received a look from them that made me mentally vow never to repeat them again.

As to the new whites, Silver Spray, Swayne, and Lamborn, they are all giving good results with me.

Lancaster, Pa. ALBERT M. HERR.

SEEDLING CARNATION.—Mr. John W. Kropf, Collinsville, Ill., sends us a specimen bloom of a seedling carnation raised by him. It is of medium size, light scarlet oddly splashed with crimson. Quite a pretty flower and might prove valuable during the present call for fancy carnations as cut flowers. Mr. K. states that the blooms are nearly all borne on long stems. It is differently marked from any other carnation we have seen.

CARNATION SPORT.—A dark rich crimson carnation which is certainly a very handsome flower, is quite largely grown around Chicago under the name of Sport. Its origin seems to be more or less in doubt, but that it is a grand good thing there can be no doubt, and it should be more widely disseminated. It is far superior to Crimson King as grown there.

Chrysanthemum Snowball.

The cut of chrysanthemum Snowball in a recent issue scarcely does justice to the flower, at least it is not overdrawn. This variety is identical with Mr. Peter Henderson's Mrs. S. Humphreys as sent out by him last spring, both having been grown and bloomed by Mr. John Lare, of this city (work for the committee on nomenclature). At all events it is certainly the most profitable for commercial florists of any variety of its color and season (middle to late) known to me. It is a long time after showing color in coming to perfection, quite three weeks or more I should say, during which and for two weeks after it is fit for cutting. Other whites, Moonlight for example,

come to perfection quickly and are soon past use.

A florist of this city grew one plant of Snowball in an 8-inch pot from which he cut 230 blooms; these he sold at three cents each, netting him \$6 90.

The variety M. J. Thomas to be sent out this spring by Mr. Robert Craig is of the same parentage only the blooms are much larger than Snowball. P. Chicago.

A National Chrysanthemum Society.

If ten years ago it had been said that by 1890 we should have a national chrysanthemum society, many would have said that those who even hinted at such a thing would be a good deal safer in some insane asylum where their utterings would not disturb the minds of their brethren with such absurd predictions.

The position the chrysanthemum occupies in America is such as no other flower (not even the rose) ever had in the short space of ten years. How the position was obtained is told in a few words. The chrysanthemum is a flower with so many variations in shape, such great diversity in color and so differing in size; it comes at a season when all flowers are more appreciated than at any other season of the year; it is a flower requiring no expensive apparatus or structure to bring it to perfection; the man who loves the chrysanthemum be he President or crossing sweeper, has but little difficulty in getting good flowers; it is inexpensive and can be obtained with little cost and trouble, as I said when there were not one-hundredth part as many grown as there are to-day:

"The chrysanthemum is a flower that does not rely upon the vagaries of fashion for its popularity. It is a flower that appeals to the heart rather than the pocket. It is a flower that is grateful for all kindness bestowed upon it and returns for such five hundred fold."

That the time has come for a national chrysanthemum society there is no doubt and for the best interests of the flower and the public it must be brought about. It will be a great task and will lay heavily on the shoulders of a few, but like the S. A. F. it will be accomplished and now is the time to strike.

Let us look at what there is to do for such a society:

First, there is the supervision and discrimination to be given to seedlings before they are distributed; this I mention first for the reason that there are so many foisted upon the market now that are worthless, and because of its great importance.

Second, the consideration and selection to be given to collections for all purposes.

Third, the best method for producing the best specimens of all kinds and for all purposes.

Fourth, the supervision as far as possible over those distributing chrysanthemums so as to insure their being true to name.

Fifth, the formation and establishing of societies in all cities, towns and villages where one does not already exist.

JOHN THORPE.

Chrysanthemums Blooming in January.

Here is a plant of Mrs. M. J. Thomas, coming into bloom eight weeks later than its regular time, a fine decorative plant for Christmas and New Years time, standing sixteen inches high in a 4-inch pot, full of large green leaves with three

branches, each carrying a beautiful large white crown flower.

As this seems to be out of the usual order it may be interesting for me to make known the method by which such may be manufactured. Inventive like, I have been experimenting having in view to improve in knowledge. This plant is from a lot of cuttings of tips from the top of an old plant taken August 1, rooted quickly and grown on rapidly to September 6, when it was transferred into a 4-inch pot and thereafter given ordinary cool growing treatment. September 25 it was cut back about four buds to induce branching and make later flowering; three branches were trained to crown blooming, and all the other buds removed, and now December 24, while the flowers appear so fine they need about five days more to come into ripe bloom, and will probably con-

LOOSE BUNCH OF ROSES AND FOLIAGE.

tinue in good condition four weeks during January.

In growing such, a few simple rules should be observed: The cutting made from flowering wood just before the bloom germ forms a bud, the cutting rooted quickly and grown rapidly for a time to keep the bloom germ from blasting, then as soon as the plant is well established and growing freely it may be potted into a blooming pot and thereafter treated ordinarily, and if trained to single stem crown bloom it will come into flower about November 20, but if cut back four buds about October 1 and branched it will come into bloom about Christmas time. In selecting sorts most suitable for this treatment I would advise such as are large flowering November blooming sorts, strong growers with stiff stems, large leaved not liable to drop and not subject to mildew. Those white in color will be most useful at Christmas time. For best results the habit of the plant and its time of blooming should be known before making the cutting.

JOHN LANE.

4801 Lake Ave., Chicago, Dec 24, '88.

Loose Bunch of Roses.

A number of our readers located in the smaller towns have complained that while they were much interested in the illustrations of floral work which have appeared in the *FLORIST*, most of them were of too elaborate a character to be of much use to them, as they never had call for such expensive work. They further requested that we devote a small amount of space to something more elementary, feeling that then they might be benefited.

In response to this request we present herewith an illustration of a loose bunch of roses and foliage. There are but a dozen roses in this bunch, but it is arranged to show the full beauty and grace of each flower. The leaves of *Cyperus alternifolius* which are here used with effect are not commonly used, but they certainly add effect and we see no reason why their use should not be more frequent in floral work.

In the arrangement of a loose bunch it is well to avoid a combination of colors. Avoid stiffness and formality. Have it graceful above all things and see that each rose has a chance to display all of its beauty. Don't crowd them together, this hides their beauty and spoils the effect entirely.

We recollect a florist of the old school whose floral arrangements were wonders of ingenious skill in entirely destroying the grace and individuality of the flowers that composed them, and in passing his store one day we were dumbfounded to see a number of vases of roses, which were most exquisitely arranged, displayed in the window. We pondered on this considerably, wondering if he had arranged them himself or if they were the work of some new assistant, but the mystery was solved one morning when we called. He was "arranging" the vases of roses for the window and this was the way he did it: He took the roses out of the box one by one and hanging the roses downward placed the ends of the stems all even at the top, and after he had a bunch of sufficient size he would right them up and place in the vase. As the stems were of varying length, when placed in the vase the roses fell away into natural and graceful positions. He remarked apologetically that he had been so busy lately that he had not had the time to arrange the vases as carefully as he would like, and we mentally concluded that it would be a grand good thing if he was always as busy.

The present great demand for loose flowers in preference to any made-up work shows the drift of popular taste and the florist who adapts his arrangements to the popular taste and demand is making quick strides towards a successful business.

Presentation to Ex-President Hill.

Recently there arrived at our office a box containing 15 volumes of the *Cyclopedia International*. On examining the fly leaf in Vol. 1 I found it was a present with the New Year's greeting of many friends of the Society of American Florists. I had no thought of such a thing, and coming so unexpectedly it was indeed a great surprise.

The thought uppermost in my mind is that I have done nothing to merit the magnificent and useful present, which has been sent me. I trust my appreciation is commensurate—in a measure at least—with the kind thought which resulted in my receiving so valuable a gift.

I apprehend and believe that our national society has a splendid future before it, and if we, as individual members of our profession, measure up to our opportunities and give of our thought, time and energies, we shall witness a marked and intelligent improvement in the profession to which we belong. If I have at any time contributed to such improvement I now feel that whatever of time or effort I have put forth is more than repaid by the generous testimonial which has been sent me.

What we want and need is a better appreciation by the public and press of the usefulness and dignity of our calling; and if we, by united effort, can accomplish this we can all feel that the advancement and position we so much desire for our calling is not so distant as it once appeared.

I value the gift on account of its practical usefulness, and let me assure one and all that I shall ever remember with pleasure the motive which prompted and the act which made me the recipient of so prized a work. With the very best wishes to one and all, I am yours fraternally,

E. G. HILL.

Richmond, Ind.

Boston.

MASS. HORTICULTURAL SOCIETY.

The annual meeting of the Mass. Horticultural Society was held on Saturday January 5. President Walcott presented his annual address. His review of the past year showed the society to be in a prosperous condition financially.

The schedule of prizes for the exhibitions of the coming year is now ready, \$3,000 is the amount appropriated for premiums for plants and flowers, \$2,700 for fruits and vegetables, and \$300 for gardens, greenhouses, etc. The spring exhibition will take place on March 27, 28 and 29; the rose and strawberry show June 25-26; the annual exhibition on September 17, 18, 19, 20, and the exhibition of chrysanthemums November 12, 13 and 14. A special show of rhododendrons and azaleas is appointed for Saturday June 8. Prize exhibitions will also be held every Saturday from July 6 to September 7 inclusive. The usual course of Saturday essays has been arranged for the winter. The first of the series will be delivered on Saturday January 12, by Mr. J. H. Bourne, of Providence, R. I. Subject: "The evolution and variation of fruit plants, their tendency to degenerate when cultivated."

On Sunday December 30, Horticultural Hall narrowly escaped destruction by fire. The careless removal of a chandelier by a workman connected with a fair in the lower hall, was followed by an explosion of gas and the stage was soon a mass of flames. Prompt work on the part of the fire department saved the building, but not until several very valuable portraits of ex-presidents of the Horticultural Society had been completely ruined. The large painting of "Christ before Pilate," which was on exhibition in the upper hall was also entirely destroyed. The total loss was about \$7,000. It was most fortunate that the fire did not reach the valuable library of the society, the finest of its kind in America, the destruction of which would have been a national calamity.

WEDDING DECORATION.

One of the most prominent society events of the season was the Barrett-Anderson wedding, which occurred on January 3. Norton Bros. had charge of

the floral decorations. The magnificent cathedral where the ceremony took place was richly decorated with a superb display of foliage plants, camellias and azaleas. The reception was held at the house of Lawrence Barrett, the father of the bride, and here too a large display of plants was made. In the hower at one end of the parlor where the bride stood none but the choicest specimen plants were used. The flowers used were also of the richest character. The pagoda arrangement overhead was composed of orchids, freesias, red and white lapagerias and Adiantum Farleyense, with elaborate festoons on either side of Marechal Niel roses and Asparagus plumosa. A large vase of Anthurium Andreanum blooms and one of superb Cornelia Cook roses were conspicuous objects in the foreground. The mantel was loaded with American Beauty roses and Adiantum Farleyense, and between the folding doors was suspended a cornucopia filled with Marechal Niel roses. Norton Bros were given full liberty as to the extent and manner of the decorations and the result was a great credit to them in every way. Every flower used was choice and perfect in itself and although there was no limit set as to the cost, yet nothing was in the least overdone. "Our Mary" was seen to take Mr. Norton's hand and thank him personally for the artistic success he had achieved, and this was surely glory enough for one day.

TABLEAUX VIVANTS ON TREMONT ST.

Gardener in ulster gets off wagon with bundle of roses under his arm which he carries into store. A few moments after he is seen coming out of the store in a hurry and just as he reaches the wagon the two hundred roses come through the open door and whiz by his head as though thrown from a catapult. Gardener returns to store with great celerity and hostilities are at once declared—"catch-as-catch-can." A truce is finally arranged, but threats of future vengeance are still in the air.

GARDENERS' AND FLORISTS' CLUB.

The subject for debate at the January meeting of the G. and F. Club was "Learning to be a gardener." Many members participated in the discussion and some most interesting and amusing reminiscences were related. The annual supper of the club will take place on January 29.

NOTES.

Arthur J. Goode, a young man well and favorably known in the florist business here, died on Friday Dec. 28, after a lingering illness resulting from a stroke of paralysis received some time ago.

Mr. Chas. Storer has just completed a number of beautiful orchid plates for F. L. Ames and J. R. Pitcher, and has received a number of orders for similar work from Europe. As a cypripedium painter especially Mr. Storer has not an equal in this country.

Benj. Grey has just started a house of water lilies for early bloom. The house is over 100 feet long. Mr. Grey has three 100 foot houses of Grace Wilder carnations. He has discovered among his plants this year three sports from the Wilder, one salmon, one purple and one white in color.

W. J. S.

Painted Roses.

ED. AM. FLORIST:—Being on Mr. Halliday's committee, I feel it my duty to inquire into the manner in which some

of your neighbors are manufacturing pink roses. Two ladies here say they have had pink roses from Chicago that were beautiful, not quite like any in Milwaukee, but next morning they discovered that their beautiful party dresses were badly damaged with paint. I know where they come from. Is it not the business of our committee to expose any fraud of this kind? I would like to get the sense of the trade on this subject and know of no better way than to ask the question through your paper.

Milwaukee.

C. B. WHITNALL.

New York Notes and Comments.

A very handsome and original decoration was arranged by Siebrecht & Wadley for a New Year's dinner and reception. It was a large affair, some 125 guests being received at dinner, and as the ordinary reception rooms were all devoted to dancing this meal was served in the basement laundry. The ceiling and walls were entirely hidden, being covered with greenery, laurel, needle pine and palmetto, brightened by well-berried holly. Recesses in the walls were filled with palms, small holly trees, Jerusalem cherries and other similar plants, until the large room looked like a garden bower. Picturesque lanterns hung from the roof and a few bright fans were against the wall where more color was needed. The dinner was served on small round tables. Over each table a large Japanese umbrella swung open, depending by its handle from the roof. These umbrellas were covered with loose flowers. Just as the clock struck twelve, ushering in the New Year, all the umbrellas were simultaneously closed by an ingenious mechanical contrivance operated from an adjoining room, thus throwing a shower of blossoms over the guests seated beneath. The reception rooms above were decorated with palms and other large plants; large bunches of roses hung over the mirrors.

A visit to Julius Roehrs' place at Ruthersford, N. J., gives the opportunity of seeing a lot of remarkably fine hybrid roses, which he has been cutting since about Thanksgiving. Anna Alexieff he grows largely in boxes, as being handier in every way than pots. The boxes are from two to three feet wide and four to five feet in length. Alexieff is a very useful rose; as one florist said recently, it would completely eclipse Beauty if it had perfume.

Mr. Roehrs' house of Luizet, coming in about New Year's, was a grand sight, clean foliage and a mass of straight, strong buds. Magnas were in splendid order, too. No other roses than hybrids are grown on this place. Carnations are doing well on some of the side benches of the hybrid houses. Noticeable, by the way, that Anna Webb, in spite of good color and texture, shrivels up much sooner than some of the other crimson carnations, such a Orient or Clifton.

Mr. Roehrs has been known for some years as one of our largest forcers of bulbs, but he says that tulips are played out now and that there is not a large profit in Romans when you pay three cents apiece for the bulbs and have to sell the flowers for \$4 a hundred.

In addition to the hybrids this place displays a lot of commercial palms, pandanus, dracaenas and aspidistras. The variegated aspidistra is very handsome and it has the merit of being a plant one can't kill. Good specimens are not very plentiful; they have been neglected for some years.

Dracena fragrans is another handsome thing that has received a little neglect.

Mr. Roelirs has a German strain of cyclameus possessing remarkable beauty of foliage as well as flowers. In many cases the leaves look like a miniature *Begonia Rex* with their silvery markings and no two plants are alike in this respect. To be salable, these plants have to be symmetrical in growth and covered with a profusion of flowers. In many cases the white-flowered ones seem preferred.

A general topic of conversation recently in horticultural circles was an article in the *New York World* the day after Christmas, describing the great "Flower Trust," in which several of our friends among the commission dealers are described as hard-hearted monopolists. This article was what its contemporaries would pleasantly term a "World fake," but it certainly did harm to the business. As one prominent up-town florist said, it gave intending buyers the impression that flowers were unusually dear, when in reality the advance was very slight. The rank absurdity of a "Flower Trust" is evident to any one who knows the business. The *World's* screed was evidently inspired by somebody's personal spite.

Cusin is one of the most satisfactory roses one can use, says Mr. Scott, because they keep so well without losing color or shape. Make up a basket of Cusins one day and it is just as good, or better, the next. Not a common virtue with roses of such fragile beauty.

Cypripedium insigne is the only cypripedium generally salable for cut blooms, says Mr. Thos. Young. The darker sorts, such as *barbatum* and *Lawrenceanum*, which one would expect to take well, hardly sell at all. Another necessity for these flowers is a good long stem.

A good idea for keeping count of roses produced by each bed was noted at Mr. Nash's. It consisted of a tally sheet divided by perpendicular lines into four sections. The sections were headed thus: Upper side, lower side, north center, south center. Above this was the number of the house. It is easy enough to enter each cutting on the sheet and thus always keep track of the crop.

EMILY LOUISE TAPLIN.

NEW YORK.—J. Arnot Penman, the American agent for the Dictionary of Gardening has removed his office from 12 Dey street to 44 East Ninth street.

TALLAHASSEE, FLA.—Juo. G. Heintz, the florist of Terre Haute, Ind., has bought two acres of land here for gardening. He has a hundred hotbed sash and intends to raise early vegetables and tropical plants.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED.—By a practical rose grower, or also by an assistant. Good references. Address D A C, Allegheny P. O. Pa.

SITUATION WANTED.—By a gardener fully competent in propagating and all greenhouse work. Address C., care American Florist, Chicago.

SITUATION WANTED.—By a florist of 12 years' experience; single; age 27. Best of references. State wages. Address R A., care American Florist, Chicago.

SITUATION WANTED.—By a florist and retail seedsman; single. No. 1 references. State wages. Address W C II., care American Florist, Chicago.

SITUATION WANTED.—An intelligent florist and gardener wants a place immediately, as foreman or manager. Apply to B. L. GOLDBOGEN, 2701 Cottage Grove Ave., Chicago.

SITUATION WANTED.—Commercial or private by single man, 28 years old; 7 years with Henry A. Dreer, Riverton; to whom he refers. Address FRANK EBNEIT, Riverton, N. J.

SITUATION WANTED.—By a young man (single), well posted in greenhouse work and willing to work under instruction. Good references. Address J C, care J. W. Ahern, Mt. Vernon, Ohio.

SITUATION WANTED.—By a young man 21 years old, in the cut flower department; 4 years' experience; can give good references. Address F. BUCKSAIT, 2610 Olive St., St. Louis, Mo.

SITUATION WANTED.—By a first-class gardener; single, German; competent in all its branches. Is foreman in a commercial or private place. Best of references. Address GARDENER, 1120 Wistar St., Philadelphia.

SITUATION WANTED.—By practical rose grower and plantsman; 10 years' experience in commercial line; age 30, single. Best of references. State terms and wages. Address E M, care American Florist, Chicago.

SITUATION WANTED.—Commercial establishment or private place in want of competent and acting manager practically posted on all matters pertaining to the business. Address for all particulars A. B., American Florist, Chicago.

SITUATION WANTED.—As gardener, private or commercial place. Aged 26; 12 years' experience; German; single; capable of taking charge of first-class greenhouses. Best of references. Address CARL WAGONER, 404 Chestnut St., Harrisburg, Pa.

SITUATION WANTED.—A first-class florist, well acquainted with all branches of the business, especially roses and carnations; also been in business for himself, and can furnish first-class recommendations. Address ANTON PUTTERICK, Florist, Westerly, R. I.

SITUATION WANTED.—As superintendent of park or grounds of large public institution. Fully experienced both under glass and outside. Had full charge where now employed five years. Have made landscaping a life study. Address RAY, care American Florist, Chicago.

SITUATION WANTED.—By a young man in floral store or office, thoroughly understands all kinds of design work; also double or single entry book-keeping; has had 5 years' experience in first-class store. Best of references. Address, stating salary paid. WORKER, care American Florist, Chicago.

SITUATION WANTED.—By a gardener and florist with 22 years' experience in the United States, growing plants and cut flowers. The growing, treatment and propagation of roses a specialty for 8 years in several states. Commercial place preferred. Single; age 42 years. Good references. Address A. GERGEN, florist, care American Employment Co., 79 Bienville Street, New Orleans, La.

WANTED.—Salesmen. By the oldest, largest and best-known Nurseries in the West. Permanent positions; good pay. Outfit free. Address STARK NURSERIES, Louisiana, Mo.

WANTED.—A capable, energetic man, single, by middle of Feb'y, or 1st of March, to run greenhouses on shares. No capital required. Address A M C, box 27, Oxford, Chester Co., Penna.

WANTED.—A good landscape gardener; one who thoroughly understands rose growing and bedding plants. None but a reliable and thoroughly competent man need apply. Address ERNEST BOLTE, Allentown, Lehigh Co., Pa.

WANTED.—A partner in a plant and floral business East. Store in center. A man of good character that can furnish at least \$100 capital. City of 38,000 inhabitants. Fine chance for the right man. Address E, care Am. Florist, Chicago.

WANTED.—To correspond with a young man of good character, that can furnish at least \$1,000, and that knows how to successfully manage the flower and plant business, and is not afraid of work. No others need write. Address OSCAR WRIGHT, Moundsville, W. Va.

FOR SALE OR RENT.—Florist business of the late H. F. Crowell; established 15 years. First-class opening for an energetic man. For particulars, address EDITH M. CROWELL, 1512 Pacific Ave., Atlantic City, N. J.

FOR SALE.—Two greenhouses and salesroom in good down town location in Chicago. Good line of decorating plants, bulbs, roses and other good stock. Will be sold cheap for cash. Good reasons for selling. Address Box 6, care Am. Florist.

FOR SALE.—In a large western city—good settled country. For the right man with some capital to connect nursery business with it. Located on Main street—street car line—7 greenhouses heated with steam; good stock of plants, 200 hotbed sash, garden tools, wagon, horses, all in good order; plenty water; 4 years more lease on 50 acres of ground; cheap rent; large house; stable. Ground for sale any time. Done good business for 6 years in flowers and early vegetables. Cause poor health. Address A F S, care American Florist, Chicago.

New Pure White Tea Rose The "QUEEN."

This splendid new Rose originated with us two years ago, and having proved valuable, is now placed on sale. It is

A PURE WHITE SPORT FROM SOUVENIR D'UN AMI.

A vigorous, healthy grower and continuous bloomer, producing a great abundance of Buds and Flowers all through the season. Flowers are PURE WHITE, showing no trace of Pink, makes good finely formed Buds and is moderately full. Petals are thick and of good substance, opens well, is a good keeper and very sweet. We believe it will prove especially VALUABLE FOR EARLY WINTER FORCING AS WELL AS FOR OPEN GROUND PLANTING, and recommend it for extended trial with the belief that it will be found a valuable acquisition to our list of Pure White Tea Roses.

PRICE: Strong well matured plants from 2½-inch pots, \$3.50 per doz.; \$25.00 per hundred. Two year plants from 5-inch pots, \$9.00 per dozen.

ADDRESS:

THE DINGEE & CONARD CO.,

ROSES. ROSES.

We have a very fine stock of Roses in four and five inch pots suitable for forcing, consisting of BON SILENE, BRIDE, LA FRANCE, MALMAISON, MERMET, NIPHETOS, PAPA GONTIER, PERLES, SAFRANO, SUNSET, and many other choice varieties. PRICE, \$10.00 to \$12.00 per hundred.

ELLWANGER & BARRY,

MOUNT HOPE NURSERIES.

ROCHESTER, N. Y.

Holiday Prices.

A clipping from the New York *World* of December 26 with the caption: "A trust even in flowers. How the small dealers are squeezed about the Holidays" has been brought to our attention.

We give the substance of it below:

"I want a nice bouquet for a lady, my usual price, about \$2," said a young man to the attendant in a leading florist's establishment on Union Square last night.

"Two dollars will not get you much of a bouquet to-night, sir."

"How much do you charge to-night for such a bouquet as I usually get for \$2?"

"I shall have to charge you \$5 for it."

"Why, that's extortion. I won't submit to it. You have no right to take advantage of your customers in that way."

"I know it seems like an outrage," replied the dealer; "but I assure you that I will not make as much profit on the sale at \$5 as I usually do at \$2. You must remember that at holiday times there is an extra demand for flowers, and prices always go up."

"Well, I can't pay \$5 for a bouquet," and the young man went away in a huff. Worse than that, his best girl was probably disappointed. Worse still, a good many best girls were obliged to go without bouquets last night!

When the young man had gone out, the dealer turned to the *World* reporter, who had been an auditor, saying: "There it is, another customer lost, and more flowers left on hand unsold."

"Why did you charge him so high a price?" queried the reporter.

"I had to do so to get my money back. Flowers are very costly at this season."

"Is there a scarcity in the market?"

"Not at all. Flowers are very abundant today. Every dealer is probably overstocked."

"Then why the high prices?"

"Because of the combination between the commission men and the growers. They always combine at holiday times and put up the prices. It is just the same every Christmas, and at Easter, and any other time when there is a special demand."

"How much do they advance the prices at such times?"

"They treble and quadruple the prices. Now such a bouquet as that young man wanted for \$2 I can usually furnish at that price and make a profit of from 50 to 75 cents. To-night I would not save myself in selling it to him for \$5. An ordinary bouquet cannot be sold to-night for less than \$12 to \$15. Why, see here, here are roses that I generally sell for 10 cents which cost me to-day \$2 a dozen. Finer roses cost \$3, and more. These carnations, which generally cost 50 cents a dozen, cost to-day from 75 cents to a dollar. Single blossoms that we ordinarily retail for 25 cents cost us 50 cents to-day."

"Who makes these advances? What is the combination?"

"It is composed of the larger commission dealers or middlemen and the leading growers. These middlemen are wealthy and have ample facilities for keeping large stocks. Before the holiday season they scour the country, from Boston to Florida, and engage all the supplies of the growers. They offer them prices above the prevailing rates on condition of having their entire output. They begin to receive these supplies two and three weeks before the retail demand sets in. They are packed in snow and kept in dark, cool, damp places so that their beauty does not fade. And so, when the retail trade sets in and dealers must have stock, these men are enabled to charge their own prices—prices which have been previously agreed upon among themselves. It makes no difference what they charge, the dealers must purchase or go without. They form as close a combination and as absolute a monopoly as the Standard Oil Company."

"Who are in this combination?"

"It includes all the commission men of any account in the city. My trade has been unusually light to-day; not for lack of would-be customers, but because people will not pay the prices I am

compelled to charge. As a consequence, you see I have a large stock left on hand, and am a heavy loser by the day's business."

William H. Brower, the well known dealer at the intersection of Broadway, Fifth avenue and Twenty-third street, was highly indignant. "Our trade has been very light to-day," he said. "People will not submit to the outrageous prices we are compelled to charge. As a consequence I am overstocked and must lose money."

"Whose fault is it?" asked the reporter.

"It is the fault of the combination. There is no reason why they should advance prices on us the way they do at holiday times, only they have the power to do so, and exercise it. But it is some satisfaction to know that they have burned their own fingers this year. Trade has been so light because of the high prices charged that they as well as the dealers are left with large stocks on hand."

"But can't they work their stocks off by reducing prices?"

"They can, but they won't. They will not sell me at any reduction from fixed prices, but they will sell to the street vender and the man on the corner such of their goods as begin to deteriorate at any price they can get."

"Who compose this combination?"

"Oh, all the commission men are in it. I do not care to mention names. It takes them all in."

"Why do the dealers submit to their extortion?"

"Because they are compelled to. But I don't believe they will do it much longer. I think the principal dealers will form a counter combination and agree to close upon holidays in future rather than encourage these men by working off their goods for them."

"Why do you not supply yourselves directly from the growers?"

"We can't do it, for several reasons. The large growers are in with the commission men in the first place, and share in the profit. Then, again, we have to keep a variety which can only be gathered from many sources, and no dealer can go all over the country to pick up his stock. Then, again, no dealer can take the entire production of a grower as the commission men do, so the growers do not care to sell to us."

The reporter visited a number of dealers from Fourteenth up to Twenty-third street and from Madison to Sixth avenue and found the same story everywhere.

The gentleman who sends us the clipping (evidently a grower) comments upon it as follows: "The poor florist forgets the profit he makes in the fall months when the grower gets but \$3 or \$4 a hundred and the poor florist receives \$2.50 a dozen for roses."

There seems to be some room for discussion on the points involved in the question of holiday prices. The statement that there is a "trust" or "combination" in the true sense of these words is of course nonsense. The high prices which prevail at the holidays are due to the unusually heavy demand at that season, which demand is anticipated by both grower and wholesale dealer as well as the retailer.

If prices have been pushed to a higher figure than would sell all the stock in the market, and stock has been lost in consequence, there has been an error on the part of the sellers in estimating the supply and demand. As the prices this season have been but little if any higher than last season it is to be presumed that the supply was larger and that lower prices were necessary to sell it all. If the supply was no larger than last season and the prices the same then it may be

assumed that the high prices of last year deterred many consumers from indulging in the luxury of flowers this season, thereby lessening the demand. If this last be true then the limit has been passed and an injury done, and the result will be lower prices next season, probably a little lower than necessary to sell all the stock, as if any have had stock left on hand this season they will be wary next time and keep down to a figure that will be sure to sell them out clean.

All that is necessary to assist these matters to regulate themselves is full information as to the supply, demand, prices, etc. at all principal points over the whole country at the holiday season, that the effect of the existing order of things on the consumers of flowers may be fully understood, and this the *FLORIST* supplies in this issue in the annual report of the holiday trade. We commend the facts presented in this report to the consideration of the trade.

The Reduced Postage on Plants and Cuttings.

I notice that one of your correspondents in your issue of January 1, complains that the postmaster at his place (he does not say where) insists in exacting the old rate of 16 cents per pound for "flowers," saying that they are not "cuttings." Your correspondent should appeal against the decision of this zealous hair-splitting Solomon to the Postoffice Department at Washington, and I have but little doubt but it will at once set him right, for of course there can be no such discrimination.

Few flowers are ever cut nowadays but have the stems long enough to be made into cuttings if desired. The reason why we were able to get a special law made so as to reduce the rates on plants and cuttings was that they were perishable goods, and consequently could not be placed on the shelves of a country store keeper like books, dry goods or hardware; in other words, the store keepers on the frontiers keep nonperishable goods in stock, so that there is no necessity for such to be sent by mail to consumers, but our perishable goods cannot be so kept and hence the good reason for being able to put them into the hands of those who want them by the mails at reasonable rates.

Jan. 4, 1889. PETER HENDERSON.

Tulips at the Paris Exposition.

E. H. Krelage & Son, Haarlem, Holland, last November planted six beds, each containing 225 square feet, with tulips on the grounds of the Paris Exposition. They are expected to bloom at the opening of the exposition or shortly afterwards. Over 700 varieties of tulips are planted in these beds.

Primula Obconica.

I would like to ask through the AM.
FLORIST, what is the best temperature,
location and soil for the successful grow-
ing of the Primula obconica? Is the
plant sensitive to tobacco smoke, and
how large do plants have to be before
blooming profusely?

I have not been perfectly satisfied with
the growing of them as yet. I will be
grateful for any information upon the
subject.

Lynn, Mass.

The Seed Trade.

SEED TRADE ASSOCIATION.—Geo. S. Haskell, Rockford, Ill., president; Albert M. McCullough, Cincinnati, secretary.

MR. T. WEBSTER of Hyde Park, Mass., is now engaged as a traveler for Mr. Wm. Meggat.

C. W. DORR has removed from Des Moines, Ia., to Seattle, W. T., where he will engage in law practice.

HOWARD & UNDERHILL will engage in the wholesale pea and bean growing business at Cape Vincent, N. Y.

H. B. GRIFFING'S SONS & Co. will be the style of the firm which succeeds the agricultural house of H. B. Griffing in New York.

A Texas Tuberose Bulb.

The account of a tuberose weighing 11½ oz. in issue of January 1, spurs me to carry out a long deferred intention of sending you a tuberose from Texas which I do by to-day's express. It is a blooming bulb and it's sets of this year's growth. The old parent bulb is completely covered with the sets and the sets are themselves blooming bulbs (one has bloomed) with a second crop of sets adhering. This is not unusual in this section with its long seasons, strong soil and long continued heat. The sets of the blooming bulbs make flowering bulbs the first season and sometimes bloom. The bulbs would, I think, pass as extra select any where.

This was one among 125 bulbs devoid of sets, planted out or started in the greenhouse middle of January last, planted in open ground middle of March and dug December 15. I have an ambition to grow tuberose ten inches in circumference and hope to do it this year. Success to the FLORIST.

Waco, Texas. J. H. HURWOOD.

[The bulb, or rather clump of bulbs and sets weighed 39 ounces and certainly beat anything we have ever seen in the way of tuberose bulbs.—ED.]

News Notes.

WICHITA, KAN.—F. & A. Kreichenmeister have built two houses, 30 x 15 and 75 x 15 respectively.

COLLEGE HILL, O.—Corbett & Wilson have rebuilt a rose house 60 x 18. Harry Corbett has built two new houses 60 x 15.

RICHMOND, IND.—Hill & Co. have put in natural gas service and are using it for heating. They are much pleased with it as a fuel.

FLEMINGTON, N. J.—L. Bonnot is building a new house 100 x 15, and putting in a No. 19 Hitching's boiler. E. Bonnot has removed to Jersey City.

ROCKFORD, ILL.—J. J. Soper has built a new house 60 x 10. Wm. Melcher has just completed a new house with office down town; this place is heated by steam.

MILFORD, MASS.—Mr. D. B. Brayton of Smeeton, Coleman & Co., florists at Little Rock, Ark., was married to Miss C. Carpenter of this city, on the 8th inst.

NEW ORLEANS.—R. Maitre has added three new houses, 110 x 12, 125 x 12 and 90 x 12 respectively, also remodeled two other houses. He has also added two and a half acres of ground which is plant-

ed with roses and orange trees, and built a new residence. J. H. Menard has added a new house 75 x 22.

DENVER, COLO.—Messrs Braun & Satterthwaite having dissolved partnership, the business will be continued by Geo. J. Braun and J. L. Miller under the firm name of Braun & Miller. Mr. Satterthwaite who retires will devote his attention to improving his city and suburban property which is becoming very valuable.

ST. JOSEPH, MO.—Haus Nielson has built the past summer on new ground nine new houses, eight 17 x 100 and one 12 x 100, also a packing and potting shed 13 x 104 and an office 13 x 15. The sash bars on the houses are of cypress, glass first quality double thick put in the 12-inch way. Raised benches are used in the rose houses.

MONTCLAIR, FLA.—A scourge of rabbits has suddenly and unexpectedly done a vast amount of damage to roses and carnations planted out. The thermometer recently dropped to 28° and the frost did some damage, but much to our surprise it did not touch a vigorous growth of Mahernia odorata. I saw lately an expanded La France rose (budded) that measured five and one-fourth inches in diameter. It was grown out doors.

CINCINNATI, O.—T. W. Hardesty has opened a cut flower store at 195 West Fourth street. It is very neatly and attractively furnished. J. A. Peterson has removed to a larger store at 42 West Fourth street. It is handsomely fitted up. A. Sunderbruch & Son have added four new houses, one 210 x 20, one 75 x 15 and two 75 x 10. All heated by steam. The Cincinnati Floral Co. has added one house 225 x 30 and one 100 x 30. Heated by steam. R. Witterstaetter has added a house 45 x 10. The members enrolled in the new Florists' Club now numbers 110. It is hoped that much good will result from this organization.

YOUNGSTOWN, O.—Miss Anna, daughter of E. Hippard, the florist, was married January 3 to Mr. C. J. Little. The house was magnificently decorated with flowers, vines and plants. The stairway leading from the hall to the second floor was adorned with Passiflora princeps. The windows were curtained with asparagus, as was also a large mirror in the parlor. These curtains were looped with ribbons and bunches of roses. The mantels and grates throughout the house were handsomely decorated with rare flowers. The bridal canopy was erected in the parlor, facing south. It was a bower of smilax, with a great wishbone of Perle and La France roses pendent from it. The bride carried a bouquet of roses and lily of the valley and her mother a bouquet of orchids.

DAYTON, O.—Holiday trade far in advance of previous seasons. Three new stores have lately commenced business. Mr. J. B. Heiss, formerly the asylum florist, has fitted up an elegant room on S. Main street and reports trade brisk. Miss Ida Smallwood has opened a cozy room in the Phillips house. The Gem City Floral Co., under the management of Miss Anna M. Troup, also opens at 23 West 4th street. The Dayton Floral Co. has given up the Main street store and holds fourth at the greenhouses only. H. H. Ritter has added two new houses this season and now has the most glass of any florist in the city. Under Chas. Beck's management the National Soldiers Home has rebuilt entire their

greenhouses. They annually use over 100,000 plants for outdoor bedding. Mr. John Mull, 237 North Jefferson street and Mr. Edw. Herbruck, 1606 East Third street have each erected a greenhouse for their personal pleasure. John Boehner, the Brown street florist, has doubled his glass this fall. All kinds of flowers are scarce in the city and prices are held up at profitable figures. Wm. Kramer's greenhouses were entirely destroyed by fire the night of December 21. No insurance. He will not rebuild.

Well Grown Roses.

Mr. Samuel Murray, foreman for Hans Nielson, St. Joseph, Mo., sends us a box of roses as a sample of what can be done by a western grower. All the roses can be called first quality and some of them are extra well done. One specimen of American Beauty was equal to any we have seen at this season of the year from the most successful growers anywhere. Mermets, Brides, Perles, La France, Contiers and Bon Silenes were also included and all first class. Mr. Murray's pride in his productions is entirely justifiable. We wish him continued success and trust his example will not fail of emulation by other western growers who have heretofore failed of marked success.

FOR SALE.

MB FAXON 2150 MARKET ST. BOSTON MASS

1,076.

The *Rural New Yorker's* seedling potato No. 2, will be sent to all yearly subscribers without charge. It yielded in the late celebrated "Potato Contest" at the rate of 1,076 bushels to the acre, the report being sworn to by six well-known judges. This seedling is thought to be the nearest approach to a perfect potato yet produced. The price of the *Rural New Yorker* is \$2.00 a year. It will be sent on a trial trip of 10 weeks for 25 cents in order to show progressive farmers, who do not now read it, that it is the best farm weekly in the world. "It has done more to promote the interests of agriculture in its experiment grounds than all the experiment stations put together." So say the editors of the *New York Times*, *Tribune*, *World*, *Farm Journal*, *Inter Ocean*, etc.; so say all who read it and know. It is pure, sparkling and original. Its illustrations are from nature. It commands the best writers in the world. Subscribe at once. Address the *Rural New Yorker*, 34 Park Row, New York.

ELLWANGER & BARRY, ROCHESTER, NEW YORK.

Come, Fellow Farmers!

It is the good things and the new things you want. Here is a Catalogue full of them! Do you want tested seed, raised from stock selected with extra care, grown from the best strains, got from the originators? I aim to have mine just such. Do you want new varieties that are really good, and not merely novelties? I aim to have mine such. Do you want seed that the dealer himself has faith enough in to warrant? I warrant mine, as see Catalogue. Do you want an exceptionally large collection to select from? Mine is such. Do you want them directly from the grower? I grow a large portion of mine—few seedsmen grow any! My Vegetable and Flower Seed Catalogue for 1889 FREE to everybody. JAMES J. H. GREGORY, Marblehead, Mass.

FAIR HILL TERRA COTTA WORKS

JACOB C. CASSEL,

No. 2341 N. Seventh St., PHILADELPHIA.

Illustrated Catalogue free upon application.

Chicago.

Some of the best lily of the valley ever seen in this market is being brought in by Aug. Jurgens of Rose Hill.

The best Mermets and Bon Silenes that come to this market are from Geo. Klehm, Arlington Heights.

Chas. F. Krueger has removed to 65 Washington street.

Chas. Woodill, with Thorburn & Co., New York, is taking in the suburbs.

Mr. I. Fosterman, of Sander & Co's. American branch at Summit, N. J. was in the city recently, talking orchids to those interested.

On the 3rd inst. Chas. Reissig cut 600 camellia blooms. This flower gives evidence of emerging from the obscurity in which it has been immured for some years, and owners of old plants may do well to hold on to them.

The Florist Club is making arrangements for the ball to be given by the club early next month. The floral decorations will be on such an elaborate scale that they are expected to linger in the memory of those who view them for many moons.

At the last meeting of the Florist Club it was decided to forward certain recommendations to the Executive committee of the S. A. F. which meets at Buffalo, through President Reynolds who is a member of the committee, covering matters wherein the club believed changes could be made to the benefit of the national society.

The Florists' Clubs.

The Wisconsin Florists' and Gardeners' Club made their notice for the January meeting a sort of prospectus for 1889, and judging from its tenor they propose to combine social and business features in a happy manner. For the benefit of other clubs we give it below:

DEAR SIR:—At our last meeting which, by the way, was a grand success, every officer as well as a large number of members being present, it was unanimously carried that we hold our future monthly meetings in a larger hall where we can have a piano and music and tables for cards or checkers, and after each business meeting we have a social for members and friends. This will tend to make our meetings still more interesting and get new members better acquainted. Prof. Jas. A. Fraser has kindly consented to play the piano and we have plenty of good soloists such as Archie Middlemas, Will and Jas. Currie, etc., to insure a good musical treat and we are all good on the chorus.

We shall continue to have papers and discussions on current topics of interest to the club at each meeting—the subject for next meeting being, "Is it good for the business to advance prices on flowers and designs during seasons of great demand, or should prices remain about the same?" Mr. F. P. Dilger will take the affirmative and Mr. G. W. Ringrose the negative. All members are invited to take a hand in the discussion. Our question box is yet in use and is becoming one of the best features of the evening. Those who cannot be present and drop in questions may mail them to me and I will put them in the box and notify you the answers. Those who were not in attendance should attend this next meeting (those who were at the last meeting will be there anyway).

As we could not get the large hall for Wednesday evenings our next meeting will be Tuesday evening, Jan. 8, at large hall over No. 1 Grand avenue. Bring any of your friends and florists or gardeners that are not already members along and they may wish to join when they see what we are doing. Hoping to see you Tuesday evening, I am yours truly,

FRANK A. HALL, Sec'y.

GROW VERBENA PLANTS FROM SEED.

A number of florists prefer decidedly to grow Verbenas from seed. Seedling plants produce healthier growth and are more easily handled than from cuttings. Our New Crop of

MAMMOTH VERBENA SEED

is now ready, grown from stock seed we saved from named plants produced in 1886 WHICH WE GUARANTEE TRUE. The flowers are of mammoth size and of brilliant colors of all shades, from brilliant scarlet to pure white, showing large contrasting colored eyes.

Choice Mixed Seed . . . trade pkt. 50c.; 1/4 oz. \$1.25; 1/2 oz. \$2; 1 oz. \$4
Smilax Seed, new crop. trade pkt. 50c.; 1 oz. \$1.50
Centaurea Gymnocarpa. 1000 seeds 60c.
Centaurea Candidissima 1000 seeds 75c.
Mignonette Machet, the best for pots trade pkt. 30c.; 1 oz. \$1

SEASONABLE FLOWER SEED LIST of New Crops now ready and mailed to all applicants in the trade.

Price list of Surplus Stock mailed free.

I. N. KRAMER & SON,
MARION, IOWA.

NEW BEDDING COLEUS "SUNBEAM."

Bright dazzling pinkish scarlet, edged yellow; medium height; stout jointed, and close branching. Selected from a large collection of seedlings of 1888. A clump of 25 plants the past season grown with all the old bedding varieties and most of the new, attracted the attention of all who saw it; and the universal verdict was the "brightest and most effective bedder of all." Somewhat dull in winter but all summer brighter than "Queen Victoria," and not stiff and coarse like that variety. Every florist should try it. One plant 25c., 3 for 50c., 8 for \$1.00 by mail.

Rooted Cuttings of Golden Bedder, Verschaffeltii, Firebrand, J. Goode and 25 other varieties—bedding and fancy—\$1.25 per 100 by mail, \$1.00 by express.

Alternantheras, best red and yellow vars., ready Feb. 1st. Rooted cuttings same price as coleus.

Address with postal note or registered letter.
R. W. HARGADINE, Felton, Delaware.

SCHLEGEL & FOTTLER,

BOSTON MASS.

Greenhouse Heating.

With reference to an article in your last issue headed, "The heating of greenhouses," I should like to ask Mr. Titus: First, whether in his opinion the English plan of having a maximum of radiating surface with a minimum of furnace temperature is not far more economical in the long run? Second, whether it is not more conducive to good results in plant growing than the fiercer heat of steam to produce which the water in the boiler must of necessity be kept up to a temperature of 212°, whatever the outdoor temperature may be? Third, why it is better (as he says) that our open system of hot water heating should have ten or twenty pounds pressure when the pressure is the same all over the system? Fourth, why is it not better for the hot water to travel naturally up to the furthest point in the greenhouse and return again naturally after being cooled than to run the hot water almost straight from the boiler down to the lowest point in the boiler again? Fifth, is it a disadvantage to have a "cool end" in a greenhouse as is sometimes the case in the old flow and return system? The tenor of Mr. Titus' remarks seems to be in favor of steam and yet nearly all his arguments (good ones too) are in favor of hot water as a means of heating greenhouses.

Toronto, Ont. A. H. EWING.

BIRMINGHAM, ALA.—C. H. Reed has added two new houses 100x18 and 100x20. Theo. Smith has completed four houses 100x30, 100x10, 100x20 and 32x10 respectively, heated by steam. The smallest house will be devoted to orchids.

"15 YEARS' EXPERIENCE. THE GURNEY SAVES 33% PER CENT IN FUEL."

Letter from Thomas Gray, of Fitchburg, Mass.,
in reference to

GURNEY HOT-WATER HEATER.

FITCHBURG, MASS., April 13, 1888.
Dear Sir:—In answer to your asking my
opinion of the Gurney Hot Water Heater
which you sold me, would say that I have
had fifteen years' experience in heating hot
houses by water, and must say the Gurney
Heater purchased of you has proved itself a
wonder, both in power and economy,
using one-third less fuel to get same results
than any heater I have ever used. The
brick-lined pot I consider a special feature,
as it renders combustion equal throughout
the entire pot.

Yours truly,
THOMAS GRAY, Florist.

SYRACUSE POTTERY CO.

We have at once adopt-
ed the American Florists'
STANDARD SIZES of in-
side measure.

Our "Thumbs" are 1 5/8
wide by 2-in. high. Our
2 1/8-inch is the same we
have before called 2 1/4-in.
We will begin to make the
"rim" pots, 1 3/4, 2, and
2 1/4-inch Standard shape
and sizes, in a few weeks.
See our "ad." Feb. 1st.
We have lately improved
our crates and packing.

Do you wish 3,000 or
more 4-inch? Don't buy
till you ask us for a special
cash price on the lot you
wish.

Size.	Price of 1000.	Crate No.	Price Crate.
Thumbs, \$ 2.40	3150		\$7.50
2 1/4-inch, 2.86	2825		7.50
2 1/2 " 3.60	1875		6.75
3 " 4.50	1150		5.20
3 1/2 " 6.30	875		5.50
4 " 7.91	600		4.75
4 1/2 " 11.10	320		4.00
5 " 14.00	320		4.50
6 " 22.00	160		3.50

We deliver free on board
here. Our freight rates are
very low. Crates weigh
about 400 lbs. each.

These prices are good
for orders sent in Jan.,
1889, cash with order.
Send N. Y. Draft or Ex-
press Money Order if pos-
sible, and always drawn
payable to J. N. Perkins.

We especially invite
large buyers to write
to us.

We pack full crates of
mixed sizes to order, but
our Ready Packed Crates
are the favorites, always
ready for shipment.
Samples of all sizes are
sent free in first crate or-
dered. These are not
"rim" pots, but look at
the PRICES! The quality
is the very best, and we
guarantee satisfaction.
Try a crate.

Send for price list of 20
sizes, and for frt. rates.

Prices advance sharp
Feb. 1st. BUY NOW.

J. NEAL PERKINS, Manager, SYRACUSE, N. Y.

"STANDARD" POTS, VERY LARGE.

Ours is the only firm that has, up to this date, made pots which conform IN EVERY
PARTICULAR to the requirements of the Committee of S. A. F.

THE Whilldin Pottery Co.

WEST PHILADELPHIA, PA., Oct. 10, 1888.
THE WHILLDIN POTTERY CO.,
DEAR SIR:—The committee appointed by the
Convention of the S. A. F., held in New York in Aug.
last, to prepare samples of pots, meeting as nearly
as possible the requirements of the florists of
America, and to be known as the Society's Uniform
Standard Pots, desires to thank you for the trouble
you have taken in this matter and for the very com-
plete way in which you have carried out the Com-
mittee's instructions. The last samples you made
have been submitted to many of the leading florists
of New York, Philadelphia, and elsewhere, and are
ENTIRELY SATISFACTORY to all who have seen them.
The Committee intends to furnish the patterns to
all the potters in the country and feel satisfied that
when these pots are made everywhere (the same
sizes and patterns), and each pot being exactly what
it purports to be, a 3-inch pot, THREE inches inside
measurement; a 4-inch, FOUR inches, and so on, a
very useful reform shall have been effected.

Yours very truly,

ROBT. CRAIG, Chairman of Com.

Print your SPRING TRADE LIST in the AMERICAN FLORIST. It will cost you less money and do you more good than to print and mail your list yourself. We will print and mail your list, in the columns of this paper, to 5,000 buyers for much less than the postage alone would cost you. A full page in the FLORIST costs only \$42 for one insertion. It would cost you twice that sum to get up a list of your own and mail it to 5,000 addresses. Think it over! We can save you money and secure you better results at the same time, for the FLORIST is preserved while your trade list otherwise mailed would rarely be kept on file. We will print extra copies for you—from the type after being set—at a nominal rate if you wish extra ones to mail in response to requests. If half a page is large enough it will cost you but \$21 for the service.

The Meeting of the Executive Committee.

The committee met in annual session at Buffalo at 10 a. m. January 15, every member of the committee but one being present. Work progressed rapidly and was completed by the evening of the 16th.

Quite a number of important matters were discussed and action taken upon some of them and recommendations in regard to others will be laid before the society at the next convention.

The Mayor of Buffalo will be invited to make the address of welcome and Mr. A. P. Calder, of Boston, the response on behalf of the society, at the opening of the August meeting. On the first day a recommendation will be made to the society that a change of the by-laws be made, providing for but two sessions each day, from 9:30 a. m. to 1 p. m. and 7 to 10 p. m., instead of three sessions daily as heretofore. This action was taken in response to numerous requests from members.

It was decided to adhere rigidly to the programme at future meetings, and in order that this may be done essayists will be required to deposit their essays with the secretary before the meeting, and in case of non-arrival or illness the president shall appoint some one to read the essay for him so that the programme may not be deviated from. The frequent, though unavoidable changing of the programme at previous conventions has caused much inconvenience to members who being unable to attend every session had arranged their time in such a way as to be present at the reading of an essay upon some subject in which they were especially interested, and then found that through inability to adhere to the programme some other matter in which they were not nearly so much interested had been substituted and the other deferred to the following session, at which time an engagement elsewhere prevented their attendance.

The number of essays for the next convention will be limited to six, two of the essays to be read and discussed at each morning session, and the evening sessions devoted to the question box. Essays will be limited to 1,500 words and answers to questions to five minutes. The president's address will be printed and a copy placed in the hands of each member present immediately following its delivery. The address will then be discussed paragraph at a time.

Several members recommended that the society as a body refuse in the future to accept any excursion tendered it, but no action was taken.

Subjects for eight essays were selected and assigned to competent gentlemen, the two extra ones being selected to fill vacancies in case some of those to whom they were assigned should fail to comply

with the request of the committee. The subjects selected are as follows: The elevation of our business; Education; The establishment of an experimental garden in this country on the plan of the one at Chiswick, Eng.; The relation of the horticultural press to the florist; Roses; Summer cut flowers; What can be done to render horticultural exhibitions more popular and profitable; Landscape gardening.

Questions which had been sent in to the committee or suggested by its members were assigned as follows:

How can the space in greenhouses be used to best advantage, both on and under the benches? Jno. G. Gardner, Jobstown, N. J.

Which is the best way to keep greenfly from roses without fumigating? W. J. Palmer, Buffalo.

Is the electric light of any benefit to blooming plants in dark weather? James Park, Orange, N. J.

Can the general florist add to his business the sale of hardy plants and shrubs for lawn decoration to advantage? Wm. Scott, Buffalo.

What is the best method of preserving wrought iron boilers? M. A. Hunt, Terre Haute, Ind.

In what way can a florist best start into business in a small town? A. Giddings, Danville, Ill.

What orchids are best for the commercial florist? I. C. Fostermann, Summit, N. J.

How can the local florists' clubs and the S. A. F. work together to best advantage? J. D. Reynolds, Riverside, Ill.

What palms, ferns and foliage plants are now most salable by the retailer? M. H. Norton, Boston.

What per centum of increase over cost should be obtained for flowers by the retailer? John Westcott, Philadelphia.

Is the practice of suddenly advancing prices of cut flowers at times of unusual demand injurious to trade? J. C. Vaughan, Chicago.

What qualifications are necessary to become a successful florist? Peter Henderson, New York.

What has been the experience in using crude petroleum for fuel in heating greenhouses? J. F. Sullivan, Detroit, Mich.

What is the cost of producing water gas for fuel? J. T. Temple, Davenport, Ia.

Does the early housing of violets in the fall have a tendency to induce disease? W. H. Siebrecht, Astoria, N. Y.

Will carnations which have originated from plants grown on light soil do well on a heavy soil? Wm. Swayue, Kennett Square, Pa.

Forcing hardy shrubs. Henry Bird, Newark, N. J.

The following questions will appear in the programme and be assigned by the president when reached on the pro-

gramme: How can we prevent excessive waste of fuel? Where does the rosebug deposit its eggs? Will the larva of the rose bug stand frost? What roses of recent introduction are of value to the florist?

Regarding the committee on nomenclature injustice was noted in the fact that many members of the committee as appointed were makers of catalogues and the president was asked to request the resignations of such members and fill any vacancies by appointments of members of the society who did not issue a catalogue. The sum of \$100 was appropriated to defray any expense the committee might incur in its labors.

Regarding the space for exhibits during the convention it was decided to charge a rental of 25 cents a square foot for all exhibits except those of plants and cut flowers. There was a lively discussion as to the advisability of admitting to the exhibition hall designs of metal, porcelain or other artificial flowers. The matter was finally left to the discretion of the local committee. The executive committee will pass upon all exhibits of new plants, flowers or vegetables which have never before been exhibited and certificates of merit will in future be awarded by it.

The badge for 1889 will be of same shape as in previous years, but of a different colored metal. The Tift house was selected as headquarters, and Music Hall, Main street, as the convention hall. This hall is very nearly perfect for this purpose. It is of just about the right size, very conveniently arranged and the street on one side is paved with asphalt while the one on the other side is unpaved. The noise of many wagons on stone pavements will not be such an annoyance at Buffalo as has been the case in other cities. The space for the exhibition is upon the same floor as the convention hall, which will be an additional convenience.

The treasurer's report showed a balance of about \$500 in the treasury, certainly a very gratifying condition. Should the receipts at the next convention be liberal the society will be in condition to carry forward some of the work which has been lagging for want of funds.

The subject of catalogue illustrations was introduced and considerable discussion ensued. It was suggested by Mr. Reynolds that a standing committee should be appointed to whom illustrations could be submitted by catalogue makers with actual specimens for comparison and if found correct the committee to certify as to their correctness, which certificate could be used and thus give confidence as to the accuracy of the same to the trade and general public who are undoubtedly becoming decidedly sceptical in regard to the engravings which appear in many catalogues. A committee consisting of Messrs. J. D. Reynolds, A. E. Whittle and G. L. Grant was appointed to devise ways and means to accomplish the needed reform. In this connection Mr. John Thorpe related how Mr. Keppler, one of *Puck's* artists, had told him that the pictures in some of the plant and seed catalogues beat anything he could get up in the way of a cartoon. Mr. Whittle told of an engraving of a water melon patch in which the melons were so thick that a man could walk entirely across the field on the melons without once putting foot on the ground. The vines in this remarkable field had no leaves, they run entirely

to fruit. Other ludicrous exaggerations were cited.

It was decided to call a meeting of those interested in the organization of a national chrysanthemum society for the afternoon of the first day of the August meeting and Mr. John Thorpe was appointed a committee to secure the co-operation of others and formulate a plan of organization to be submitted to the meeting at that time.

Members who had expressed themselves adversely on the question of entertainments were obliged to face the issue much sooner than expected, as the Buffalo florists invited the members to a carriage ride through the parks and around the city in the afternoon and a banquet the evening of the last day. Several members of the local club tendered the invitation in person while the committee was in session and none of the members could find strength to move that the courtesy be declined and it was finally accepted. It was indeed difficult to refuse an invitation so heartily and hospitably tendered and it must be said of the Buffalonians that when they undertake anything of this kind they do not do it by halves. While it was a matter of regret that so much should have been spent upon mere entertainment, that it was a thoroughly enjoyable occasion none present will deny.

Buffalo is justly proud of its park system, which is under the able direction of Mr. Wm. McMillan, and the drive encompassed nearly the whole system, containing some 500 acres, as well as the principal residence streets. Stops were made at the greenhouses of Messrs. Wm. Scott and C. Christensen.

The banquet was given at the Niagara Hotel, the site of which is said to be that of the first greenhouse built in Buffalo. The hotel is situated within 100 feet of the Niagara river. A feature of the building is that the veranda on the south side looks into a large conservatory filled with handsome tropical plants. A place singularly appropriate for the occasion. Mr. G. H. Lewis is the proprietor of this charming hotel and Mr. John Miller is the gardener in charge of the conservatories.

The menu was in keeping with the perfect appointments of the hotel and it was heartily enjoyed. Mr. Wm. Scott gracefully presided and toasts were fittingly responded to by Messrs. E. G. Hill, John N. May, Hon. David Day, Jas. D. Reynolds, D. B. Long, Wm. J. Stewart, John F. Cowell, John Thorpe, Wm. McMillan, G. L. Grant, Elias A. Long, W. J. Palmer and A. P. Calder.

Work of the Executive Committee.

The meeting of the executive committee of the S. A. F. at Buffalo, has been characterized by much that was pleasant and encouraging.

No one could have attended this meeting without being impressed by the cordial unanimity displayed by the members in supporting every proposition or suggestion likely to tend to help the society, and consequently florists in general. No person need be discouraged and fear its future degeneration, while so hearty an interest is manifested.

This interest was more than ever apparent this year, and as an illustration of it may be mentioned the fact that some gentlemen of the committee were instructed by local clubs, of which they are members, to mention during the session certain suggestions which they would be pleased to see carried into

effect. We may be sure that where there is discussion there can be no stagnation. Let all local clubs be stirred to offer counsel to the executive body, for advice having improvement for its aim, must ever be welcome.

From some we can still hear the old cry—"What good does the society accomplish?" Argument probably never brings conviction. These pages might be filled with cogent reasons showing how men would be benefitted by joining the society, but all would be powerless to convince those determined to criticise, and whose criticisms are prompted by a spirit of doubt and dislike. No man ever yet helped to pull the wheels out of the mud by standing only to look on and find fault. Determined effort is always sure of success, and this national society can be made a means of immense good to all by co operation from all.

The future of the society should not be underestimated. Already, to an observant eye, may be detected many signs of progress. Not the least of these signs is the respect that is paid by the horticultural world to the opinions that have received the endorsement of the society. It is nonsense to say that the acathing denouncement of unscrupulous men who, in order to reap personal gain, have not hesitated to descend to practice dishonest methods of business, has not produced some result. If a systematic inspection and publicity have not yet been attempted such men know that the eye of vigilance is open, and consequently are not so bold in their nefarious ways. We might as well say that all exposures and articles criticising public affairs, in the newspapers, produce no results, because direct action is seldom brought about by such writing, as to say that all agitation for various reforms that originates in the discussions of the society is useless, because instant action is not at once perceptible.

Besides, it is not possible for men of experience to meet together without evolving some thought likely to benefit themselves and their neighbor. It is perhaps safe to assert that if the essays which have been read in the past had not been compiled for this purpose, much information now available would be still hidden away in the brains of the writers. Where is the man who, reading all these essays, would dare to say that he has gained nothing from them? The writers themselves have also been gainers by their own individual writing. For in order to write a paper that must bear the scrutiny of men thoroughly educated in the profession, an accurate knowledge of one's subject is essential; and all statements must be verified either by the experience of the writer, or that of some other person to whom he refers for the information he needs. It is impossible for a man to be aroused himself without arousing some other, and thus, from year to year, by means of these essays and questions answered by practical men, an immense impetus is given to horticulture at large, though it may not be immediately apparent to the beholder. All progress can not be measured by the eye, but after the lapse of time the distance traversed can be readily seen and astonishes all by its magnitude.

It is very unkind and selfish for men to refuse their presence at the society's conventions on the plea that a copy of the proceedings will be mailed to them, and they can therefore obtain all the information they need without the expense and bother of attendance. Many, of course, have legitimate reasons for their

absence, but it is to be hoped that all the members who can will unite in making the next convention the largest gathering yet witnessed.

A topic broached at the meeting of the committee, and upon which a paper will be presented at the August meeting by Mr. John Thorpe, is one likely to be of infinite value to all. It certainly will be interesting, and if organization can be effected to further the aim in view, a permanent gain will surely result. The reference is to the means available for the establishment of a national experimental garden. There is no man better fitted, by both ability and experience, to cope with this subject than Mr. Thorpe, and we may expect him to give it a thorough examination, in order to present for our consideration practical views respecting it. There is an earnest desire that all interested in such a project will be present, and that their views may be expressed freely, so that discussion may tend to combination. It is in such questions that the national society is of incalculable benefit. Individual action would certainly fail to accomplish any result, but persistence shown by the society in making use of every aid towards the permanent establishment of this and similar ideas must bring a weight and authority that any other effort would certainly fail in securing.

The development of theoretical and practical horticulture is again to receive attention. We shall all agree that no subject can be of greater importance to every man who loves gardening and desires to see gardeners recognized everywhere as men of ability, education and refinement. Is it only a fancy of the writer that the consideration of this topic has already inspired in some minds desires for improvement and elevation? There is an earnestness exhibited concerning improvement, which prophesies great progress for the future. Let us look back but twenty years and dull indeed must be the vision that cannot mark the upward tendency.

Practical work is laid out for the committee on nomenclature, and when the convention meets some conclusions will be forthcoming for the action of the society. Naturally much difficulty must be experienced in making this work a thorough one. It is hardly possible that all the false nomenclature can have come under the personal observation of the members of the committee, but it is to be hoped that any florist in any state who has any facts in his possession bearing upon this subject will communicate them to the chairman of the committee Mr. John Thorpe, some time before the month of April. The desire is that no one should be screened who can be proved to have taken a plant already named, baptized it afresh and sent it out for the purpose of personal gain; let the facts be known that all may guard against such deceit. Also those plants over which there has been argument in the past as to their proper name, will now receive correct classification and all further questioning be ended. If only this work be properly done the national society will have earned the gratitude of all.

Another committee has been appointed to take into consideration the exaggerated illustrations in some florists' catalogues and to try and devise a plan whereby the evil may be checked. This desirable reform was also suggested to the executive committee by a local florists' club, thus evidencing a widespread anxiety that our business methods should

be more generally characterized by perfect truthfulness and fair dealing. Does not this spirit indicate the work that the society is doing? The good that it is accomplishing? It is sometimes said that no success can attend such efforts, that there will always be men who will attempt trickery to sell their goods. We grant this unfortunate tendency of human nature, but we also claim that, given the support of all justice-loving florists, all cheating can be made to hide its head. No man that grows or deals in first class articles ever needs to misrepresent his stock. In fact, he never does so. The stock speaks for itself. It is also requested that any one desiring to call the attention of this committee to misrepresentation in any catalogue will send their facts to Mr. J. D. Reynolds, Riverside, Ill.

FERN BASKET

All who attended these sessions of the advisory board feel firmly impressed with the idea that the S. A. F. is a success and will continue to be a success. Not the least element contributing to the success of the society is the sociability fostered by its conventions. Those who have been constant in attendance at these gatherings can vouch for the truth of this statement. To meet with live men from all sections of this vast country does broaden and develop our own limited range of observation. Last year the meeting in New York was well attended and there are many indications that there will be no falling off when the time arrives for assembling at Buffalo. If it could be generally known how hospitable and kind the Buffalo folks are the attendance in August would be larger than at any previous meeting. Sometimes it is exceedingly pleasant to be surprised, and the members of the executive committee found this to be true at Buffalo. There was rather a feeling that Buffalo was country, and from the country but little must be expected. Would that in all places we meet, the country spirit could be equally manifested, for the florists of this city, both professional and amateur, vied with each other in acts of courtesy and kindness. These gentlemen, not satisfied with showing every attention at this time, wish it to be understood that all will be welcome in August, and that Buffalo hearts are large enough to care for everybody.

Not only is the hospitality of our friends generous, but the situation of their city is most pleasant and attractive. Those that love the beauties of nature can enjoy them here to their heart's content. Besides the magnificent lake and the delightful drives we are all aware of the vicinity of the Niagara cataract, and though many have seen this mighty force yet no one can ever tire of gazing upon its sublime grandeur. Our Buffalo friends have already signified their intention of inviting the delegates to behold the majestic scene.

Before leaving this subject it may not be amiss to mention the handsome hotel where the executive committee was banqueted by the florists' club of Buffalo. The Niagara hotel, under the management of Mr. Henry F. Roesser, is one of the most luxuriously appointed hotels in the country. Some very attractive features are connected with it. A large conservatory filled with some fine plants, magnificent view, perfect table service, all combine to offer advantages possessed by very few others. If any florist, during his trip to Buffalo, wishes luxury and comfort at a comparatively moderate expense he can not do better than patronize this hotel. ALFRED E. WHITTLE.

Fern Basket.

A small six paneled white glass basket splashed and decorated with blue, with large loop of ribbon fastened at two opposite sides, to be slung over the shoulder, as is the English manner of carrying opera glasses. This was filled with adiantums, carnations and a few cyclamens from behind among the ferns. It was used at a wedding, each bridesmaid wearing one and was arranged with great taste by Lee, of Union Square, New York.

F. A. B.

New York Notes and Comments.

The Florists' dinner was a great success, apart from the material side, which endeared Morello in the feelings of the guests, the social side was without flaw. Mr. May was in the chair. Mr. W. J. Stewart led the Boston delegation, while Mr. Craig was chief of the Philadelphia brothers. The latter party included a sweet-voiced vocalist, who added much to the pleasure of the occasion. A little orchestra of three pieces discoursed music during the meal, which began at eight—statements are rather conflicting as to the exact time it was ended. Mr. W. S. Allen and Mr. Chas. Weathered were the committee of arrangements, and the result of their joint labors was highly appreciated. Speeches were made both by officers and guests, and a learned discussion between Mr. Peter Henderson and Mr. Wm. Elliott added much to the botanical knowledge of the audience, the subject being the eccentricities of early dwarf Lima beans. The guests numbered about 70, and they are unanimously of the opinion that the festivity ought to be repeated under the same management.

Ernest Asmus' lilac house looks like a small forest, for most of the bushes are regular trees, but they produce large spikes of fine flowers. Mr. Asmus, who has always been a large lilac grower, has pretty well discarded the French pot plants. They are fine when perfect, but in too many cases the flowers do not open evenly and the sprays are poor in consequence. The home grown plants are preferable, though this season there is much loss caused by the invasions of the mussel scale, which often completely

smothers the plant. Of course it could be cured if application was possible to all parts affected, but it is impossible to touch all the fine twigs in a close-growing bush, consequently the pest soon spreads, especially under glass, and the affected plant must be destroyed. A very bad case of this scale on the laurel-leaved willow was completely cured by cutting off all the smaller branches, and thoroughly painting every part of the remainder with thick whitewash.

Like Mr. Roehrs, Mr. Asmus thinks there is not much money in Roman hyacinths, especially when a bulb produces only one good spike of bloom, as is usually the case this season. Growers complain that the bulbs grow smaller year by year; when the steady demand for forcing first began the bulbs were strong and large, producing two or three good spikes apiece. Now they are small and weakly as a rule, and the grower loses in consequence. Seems as if the growers would have to combine and insist on a standard size and quality in Romans. Mr. Asmus is testing some of the new English narcissus recommended for early forcing, and he is also putting in a lot of gladiolus in one of the rose houses. By the way, he thinks that *Sunset* has produced a smaller average of "bull-heads" this winter than *Perle*, as far as his experience is concerned.

Rudolph Asmus is happy in the possession of one of the finest lots of *Bride* and *Mermuet* seen this winter. Strong, well grown plants, showing a splendid crop of large well shaped flowers. All the stuff at this place is in good order, but the *Brides* and *Mermets* were so exceptionally fine that they were a pleasure to look upon. Bennett Mr. Asmus thinks of giving up; they seem inclined to give a good crop early in the season, and then do nothing for months afterwards, though looking all the time as if just ready to break. Goutier is praised by both the Messrs. Asmus, but like many others, they complain of its liability to drop its lower leaves.

"*T. L. Lamborn*," the new white carnation mentioned in the last issue of the *FLORIST*, seems likely to be a fine thing for a market plant. As recently seen at Peter Henderson's it forms a very shapely plant, covered with good leaves right to the ground. It is said to be a good summer bloomer; the habit of growth is rather like the old-fashioned pinks. Very few of our good carnations form shapely plants suitable for sale in pots, so it looks as if the variety under discussion would find a profitable future in this direction.

"*Tidal Wave*" is another new carnation sent out by W. P. Simmons, of Geneva, Ohio. Some blooms recently received were unfortunately delayed on the road and somewhat faded in consequence, but they were evidently large flowers, something the type of *La Purite*, firm in texture and very fragrant.

Black Dwarf is a new coleus noted at Peter Henderson's—a fine one, too. The foliage is a rich deep purple; the growth compact and a trifle smaller than *Golden Bedder*. These two will form a striking contrast; *Black Dwarf* would be noticeable anywhere.

A houseful of Bermuda lilies in pots made a pretty sight at the same place. These lilies, in pint pots, should be thoroughly salable market plants for Decoration Day, sold at a quarter each, could hardly expect a higher price, for this anniversary is an occasion when flowers and plants are wanted at popular prices.

Peter Henderson's new seed warehouse near his nurseries consists of two stories

and basement, 50x100 feet. It will be chiefly used for the bulkier farm seeds which could not be accommodated at the store in Cortlandt street.

EMILY LOUISE TAPLIN.

Washington.

The holidays have proved a rich harvest to florists here, in fact the supply of cut flowers, large as it was, fell short of the demand.

In Washington New Year's day even excels Christmas in its demand upon florists. Such an array of receptions as take place at the National Capital on that day will nowhere else be found in the country. At the head of these stands of course the one at the White House and the florist's art is now recognized as an indispensable adjunct on all such occasions. At the White House alone it takes not less than a thousand growing plants to make anything like a respectable display. Mr. Pfister, in charge of the conservatories there, is well up in such matters, having served in a like capacity at the Luxemburg Palace during the advent of the Empress Eugenie, and Mr. George H. Brown, in charge of the public gardens, is too well and favorably known to be more than mentioned. These two gentlemen supervise all floral decorations at the White House.

The east room contained some fine grouping of plants this year, notably so a cluster of palms, in the center of which stood a superb specimen some 16 feet high; bright poinsettias, exceptional specimens about six feet tall, were interspersed among the palms, giving the group rich coloring while the base was appropriately made of ferns and mosses. Azaleas, begonias, smilax and other trailing plants figured plentifully in the various rooms and corridors. The display of cinerarias deserves special mention, the plants being in exceptionally fine condition and the bloom of rare size and beauty.

The blue room was resplendent with cut flowers, notably so the hearths and mantels, the latter of which were solidly banked. There seemed to be, however, no overcrowding, in fact the spirit of economy which prevails at the White House is quite noticeable in the absence of rare and costly blooming plants, such as orchids and the like.

All along the line florists have had their hands full at fair prices during the past week and the prospects ahead for a good season were never more encouraging.

A subject of considerable interest to florists here and all over the country is the question of decorations on the occasion of the Inaugural ball, March 4 next. It is to be hoped that something in better taste than the conventional display of bunting will be effected this year. The structure where the ball is to be held is peculiarly adapted for floral display. While patriotism dictates a moderate show of bunting on such an occasion it should be remembered that this is not by any means a military ball and that ample and appropriate floral decorations alone can give evidence of the inborn good taste and refinement which pervades Americans as a nation.

Z.

OBITUARY.

HENRY J. MCGALL died January 6 at his home in Orange, N. J., of pneumonia, at the age of 45 years. He leaves a widow and five young children, the oldest only 8 years of age.

Mr. McGall was a thorough business man, upright and just in all his dealings, courteous and popular in his business, always kind and generous with his friends of which he had many. He started in business as a florist in this city in 1871, and his strict attention to it combined with a good practical knowledge of horticulture soon gained him a good business which has been steadily increasing ever since. About two years ago he built a fine store for seed and cut flower business on Main street in conjunction with a conservatory for ornamental and decorative plants, and it was just beginning to repay for the outlay; a few days before his untimely death he remarked that he hoped to so improve his business as to make it profitable and attractive at all times.

His loss will be greatly felt and deeply mourned by his family and a wide circle of friends. The New Jersey Floricultural Society loses in him one of its most valuable supporters. He had been its treasurer from the start. He was also vice president of the Society of American Florists for northern New Jersey, and was always earnest and painstaking in all matters relating to the same.

This is the second death among the florists in the prime of life in this section within five weeks, the other being Mr. Thomas Lyons, of Mountain Station, Orange, who was also a very hard working energetic business man, and at the time of his death was a vice president of the New Jersey Floricultural Society and very much esteemed by a wide circle of friends.

Prize Winning Chrysanthemums.

Our illustration is from a photograph of the chrysanthemum house of Messrs. Davis & Jones, Camberwell, England, and shows the plants from which were selected the lot which won the first prize (gold medal) at the English National Chrysanthemum Society's show November 7-9. The center bench contained 1000 plants, all carrying large flowers of exhibition size and quality. The photograph was secured for the *FLORIST* by our London correspondent.

Chrysanthemum "Snowball."

In your issue of January 15 a correspondent, "P," says this variety is identical with the "*Mrs. S. Humphreys*" sent out by me last season. In all probability it is, and it may also be grown under a dozen other different names, for the reason that my "*Mrs. Humphreys*" is one of a set of thirty chrysanthemums imported from Japan in '87. And that this same set of thirty, such as was received by me direct from Japan, was offered the same season by Berger & Co., of San Francisco, who sold I believe to a dozen or more growers in all parts of the country under numbers—and there is no doubt that their set of thirty was one and the same lot received by me from Japan direct. Mr. M. A. Hunt, of Terre Haute, Ind., wrote to me after receiving his set (I presume from Berger & Co.), in the hope that we might be able to get together and decide on a uniform nomenclature for the set, but we found it to be impossible to trace to whom the sets had been sold, and the scheme for uniform names for the list had to be abandoned. In all probability the white above alluded to, as well as the other twenty-nine kinds, have each six, or may be a dozen different names now, which will lead to great confusion and dissatisfaction, all

PRIZE WINNING CHRYSANTHEMUMS

owing to the stupid way of having them sent to so many different parties under number instead of under name.

This chrysanthemum which I named "Mrs. Humphreys" and your correspondent has also as "Snowball," is in my opinion the best white chrysanthemum yet introduced for cut flowers. It is of great size and substance, and in the New York market sold for nearly twice the price of any other white variety that we grew, and we believe we have nearly everything worth growing among whites.

This confusion among this set of Japanese chrysanthemums, in my opinion will tax the energies of the committee on nomenclature to straighten out, and I much fear that it will be beyond their powers. Of all the stupid blunders that florists and nurserymen can make, the most stupid is to send out plants under number instead of under name. It was

in this way that the grand collection of the Rogers' hybrid grapes introduced over thirty years ago was virtually lost to the country. They were sent out under number instead of under name, and while there were probably a dozen excellent varieties in the thirty or forty sent out, it is doubtful if more than four or five are in general cultivation to day, and even among these there is some confusion about names, as for nearly fifteen years they were known only under number until the National Pomological Society put them under name.

PETER HENDERSON.

Jersey City, N. J., Jan. 19.

Winter Flowering Chrysanthemums.

Another January flowering plant: Mrs. Frank Thompson. This plant was a

large one over three feet high, with a trunk fifteen inches long and ten branches stopped at fifteen inches long carrying some forty flowering stems, when lifted from the open ground Sept. 15, root pruned to a six inch ball, and potted in an eight-inch pot. The plant was well cared for, yet lost all its leaves except those on its flowering stems; it also lost largely of its flowering buds, the result of such close root pruning and small potting. A few flowers came to maturity in November by which time the plant was making wood and new flower buds rapidly, which came to maturity all through the latter part of December and first part of January. The stems were disbudded to sprays of three and single crown blooms and the plant has probably matured over 200 blooms. I cut 50 fine large blooms from it to-day, cutting the plant down. Other plants of same sort

lifted at same time, as usually done, and placed in 12 inch tubs bloomed freely in November and have long since passed blooming.

JOHN LANE.

Chicago, Jan. 10.

A National Chrysanthemum Society.

The action taken by the executive committee in deciding to issue a call for a meeting to organize a national chrysanthemum society during the next convention was certainly a wise one. The awful tangle in which the nomenclature of the chrysanthemum now is calls for work, and immediate work, at the hands of some authoritative body such as the proposed society will be. If for nothing else than this the society should be organized, and there will be abundant chance for effective work in similar channels. We are glad that a man so identified with the history of the chrysanthemum in this country as Mr. John Thorpe has acted upon our suggestion and set the machinery at work towards accomplishing the necessary organization.

Carnations and Soils.

Mr. Charles Hartwig, a Chicago grower, thoroughly endorses the statement that certain varieties are especially adapted to certain soils and success is largely dependent upon soil suitable to the variety grown. He relates his experience with Hinze's White as follows: In 1882 he tried fifty plants of this variety and after giving them a thorough trial threw them out as worthless. In 1884 he saw a house of this carnation at another grower's place in such magnificent condition and so productive that he resolved to give it another trial. He purchased several hundred plants and again gave them a systematic trial with the same result as before and again he threw out his plants in disgust. Since then he has removed to a new location with a somewhat different soil. Last year after seeing several houses of Hinze's White at various grower's places he decided to give the carnation a third trial. He did so and to his surprise had grand success with it, having a crop of bloom way ahead of any he had ever before obtained from any white carnation.

With him E. G. Hill has been a failure and he finds Garfield by far the best scarlet.

He likes Wm. Swayne and L. L. Lamborn, but considers them as not equal to Hinze's White for his soil and requirements.

Western Notes on Carnations.

In a country extending over so vast a range of soil and climate it is but natural that plants, or varieties of the same class, may be a success or failure, in proportion to their adaptability to their surroundings. As an illustration of this, there is not a single broad-leaved evergreen which can be successfully grown in this section, even the common Box, grown so plentifully in the east, in a year or two succumbs to our usually hot summers and dry winters.

But I started out to make a few observations upon a class of plants which have become indispensable to the florist, taking my notes from a standpoint including Western Missouri, Eastern Kansas and the southern portions of Iowa and Nebraska, a scope of territory about equal in extent to the states of New York and Pennsylvania, and while there may be local causes affecting some varieties, yet as a rule plants which do well at any one point within this area can be relied on in any other section of it.

In white carnations we have heretofore largely depended upon President De Graw, growing Peter Henderson and Snowdon to a limited extent. De Graw has not always been satisfactory and we grew it only because it was the best long stemmed variety we could find. Snowdon has always been prolific, but having very short stems can be used for little else than putting up work. Peter Henderson as a plant does well and would be valuable were the flowers more perfect. Hinze's White was received from Mr. Breitmeyer, of Detroit, some eight years ago and after a trial of two or three years was discarded, not producing flowers enough to justify growing it, but after it became so popular north and east I concluded to again try it, but with no better results until this season. The past summer and fall having been exceptionally cool with us, Hinze's White is doing remarkably well. I have no doubt that for a cool climate it is a valuable variety, but for this section it is not always reliable.

If the varieties introduced within the last couple of years sustain their present character it will not be long until they will supersede all other white carnations; first among them is Silver Spray, this variety appears to combine all the qualities of a first class flower and with the year's trial I have so much confidence in it that for myself for a white carnation I shall grow Silver Spray almost exclusively. Wm. Swayne in many respects is a fine carnation, the flowers are pure white, of the largest size, it is an early and abundant bloomer, a large proportion of the flowers borne on long stems, but they have that crimped appearance so objectionable in Peter Henderson. L. L. Lamborn with us is rather a weak grower and only a moderate bloomer, but the flower is perfection itself.

Among red carnations, in my estimation Portia takes the lead. I may be somewhat partial to this variety, but its bright crimson scarlet fragrant flowers are always attractive. It is a heavy cropper, blooming from the earliest to the latest, it makes a strong bushy growth, pushing up numerous stalks with long side branches, usually terminating with a single flower.

Garfield is prolific but late, it makes a strong healthy growth, blooming in clusters; for working up or for pot culture it is valuable.

E. G. Hill in the open ground I formed a poor opinion of, but since it has been planted on the bench it has shown its good qualities. It is producing heavy crops, at first in clusters, but later making long stems. In color it is a shade between Garfield and Portia, it makes a healthy, robust growth and is rather an early bloomer.

La Purite has always been healthy and reliable with us and those who are acquainted with this popular old variety are aware that there are few to equal it, both as to color and blooming qualities, but it requires a warm climate and rather a dry soil to bring it to perfection.

I have grown King of Crimson and Black Knight for a number of years, but never found either of them profitable; they usually produce a fair first crop, then dwindle away, or die outright. I am inclined to think that Anna Webb when better known will supersede other crimson carnations.

It appears somewhat strange that out of all the new varieties brought out within the last few years, there are so few pinks which have proved entirely satisfactory. Grace Wilder, although in the market for several years, is scarce and appears to be hard to grow, and while the flowers command double the price of any other variety in the market, yet I am inclined to believe that except in favorable locations it will not be a profitable variety for general cultivation.

A variety which I received a year ago under the name of Mrs. Cleveland so far appears to have some good qualities and while not so straggly a grower as some others, it makes a healthy, bushy plant, rather free, with flowers on long stems, though in color it is not a real pink, being about the shade of the Hermosa rose.

In yellow grounds I have always found Imogen most reliable for general purposes; the individual flowers are not so large and showy as some other varieties, but it is a constant and prolific bloomer, a large proportion of the flowers borne on long stems. Buttercup is valuable only as a pot plant, producing its flowers too sparsely to be of value for cutting.

St. Joseph, Mo. D. M. REICHARD.

Carnation Disease.

Apropos of Mr. Seymour's instructive paper, page 252, I would like to call your attention to a note in the *Gardeners' Chronicle*, page 636, Dec. 1, 1888, and headed "Eel Worms." It draws attention to a new treatise in French on these mysterious creatures, and says—"the leaves * * of carnations and even of orchids are affected by creatures of this description." Recently I have been investigating a certain disease in mushrooms, and which till a few weeks ago I had always regarded as caused by a fungus parasite. On submitting specimens to Dr. Farlow, professor of cryptogamic botany at Harvard College, he told me the disease was the work of anguillulæ (eel worms), which were present in large numbers, and not of another fungus at all.

Now anguillulæ are very microscopic and ill-understood creatures; in fact so much so that we have barely any American literature on the subject. But they abound everywhere; in fact Dr. Taylor, the microscopist of the Agricultural Department at Washington, writes me that the algae (the green dirt) on flower pots is full of them. Now, their work in mushrooms is in general appearance so very like the spots often seen in carnation, orchid and other plants that the above referred to note in the *Chronicle* struck me as being intensely suggestive.

This whole question of plant diseases is one of vast importance to us, but practical men like myself are absolutely unfit to grapple with the subject; it is a matter for the scientist. We can understand fairly well anything we can see plainly, but the obscure diseases bother us. It isn't enough for us to say, "Oh, it's some sort of fungus." Be precise, know for a certainty whether it is a fungus or not, and if a fungus what fungus it is; also whether the fungus is the cause of the effect.

If only one tenth as much scientific attention had been given to the diseases of florists' flowers" as has been lavished upon pear blight, peach yellows or wheat smut, we would not now be wading so deeply in ignorance of what is of such vital interest to us. And surely the florist business of America is important enough to warrant scientific recognition.

Glen Cove, N. Y. WM. FALCONER.

It was a surprise to me to note in the FLORIST of December 15, an article by Miss Emily L. Taplin, stating that Mr. John N. May had rooted out the above named rose. I have watched the same as grown by Messrs. Craig & Bro. for the past six months and have come to the conclusion that it is all that is claimed for it by the florists on the English side. As seen at Messrs. Craig's the plants are entirely free from mildew or any other disease and are in fact the cleanest and healthiest plants in the one house which has also some four or five other varieties in it. The color is somewhat richer than that of the popular Catherine Mermet with a slight though very pleasing shade of salmon. The bud is well formed, the petals having great substance and for free blooming the rose is certainly entitled to a high rank, as it is safe to say that it will produce three buds while the Mermet is making one, but the buds are not so large as those of the latter. It is a rose which keeps exceedingly well, as Mr. Craig informed me it was good after having been cut some ten days; this fact alone ought to recommend it to the dealer.

Mr. Craig says he visited Mr. May last week and the latter expressed himself as pleased with "Edith" and had no intention of rooting it out so there has evidently been a mistake made somewhere, and in justice to the rose it ought to be corrected, as the opinion of Mr. May is highly valued by the trade and if he condemns a rose it is certain to have a depreciating effect on the same. So far as Edith Brownlow is concerned I must be permitted to say that in the opinion of some of the leading florists in the country the above named rose is a very promising variety.

What has become of the Puritan? Last winter nearly every grower around Philadelphia had more or less of them planted and we were told that this winter it was going to be a great favorite, yet I have found but one place where it is grown, and as far as this vicinity is concerned the prediction has failed.

Lausdowne, Pa. W. W. COLES.

Notes From Mamaroneck, N. Y.

BY WM. FALCONER.

HEATING—The other day I called to see Mr. George Grant, gardener to Mrs. Osborne at Mamaroneck, about twenty miles from New York. This place is one of the finest in the country, and the greenhouse establishment is unsurpassed;

it is the best and most complete effort of Lord & Burnham. Steam and hot water both are used in heating it, and five boilers are at work and stand close by each other in the stoke hole. Mr. Grant would be inclined to favor steam heating in large and commodious, even-sized florists' greenhouses, but for private greenhouses that are a good deal subdivided into compartments he comes out strongly in favor of hot water.

DENDROBIUM CHRYSOTOXUM.—"This is a grand orchid, but to flower it well we have got to ripen it off thoroughly," says Mr. Grant.

ANGRECEUM LEONTI is prettily in bloom in a hanging basket. An odd and pretty plant, always desirable in a collection, but I don't think of any account for cut flowers, too short stemmed.

ONCIDIUM CAVENDISHIANUM is cheerfully in bloom in a basket overhead. A stiff-leaved, stiff-flowered orchid, but a fine, robust, winter-blooming species well worth obtaining.

THE DECIDUOUS CALANTHES are most desirable orchids; their proper season of blooming is November to January, and their long, gay arching flower spikes are excellent for cutting. These plants are so easily grown and so generous and the flowers last so long in perfection either when cut or on the plant, that they are equally desirable for amateurs or florists. The commonest and about the best sorts are *C. vestita*, both the yellow and the red-eyed varieties; and *C. Veitchii*, a red-flowered, more robust and grander orchid.

CYPRIPEDIUM INSIGNE is going past. What a splendid orchid this is! If you are restricted to one species have this. It blooms from the first of November till the middle of January in great perfection and profusion; and may be had sooner or later by humoring. It isn't a showy flower at all, but this is compensated for in its substance, bold form and staying qualities. Not only do the blossoms last a long time on the plants, but if cut when tolerably fresh they last, under favorable circumstances, in good condition for several weeks after having been cut. And the plants grow "like weeds" and have a thrifty look about them all the time, and when the proper time comes round never fail to bloom.

THE CAMELLIAS are planted out and look very fine, and several are in good bloom. As the flowers are so easily stained when handled they are not as satisfactory cut flowers as are many other things.

TILLANDSIA LINDENI.—One of the loveliest of all bromeliads. I was pleased to see a good many plants of it here and find that it is appreciated. A compact rosetted grower, and bearing from every young growth spikes of the loveliest and richest violet-blue flowers. A native of the Andes of Peru.

ROSE MME. CUSIN.—Mr. G. has a good word for it and grows a lot of it. When well grown and of good size it is one of the loveliest of roses.

CHIRYANTHEMUM CUTTINGS.—Mr. G. is putting in his stock of cuttings now so as to get rid of the old roots, save space and ease up a little on the work later on.

HE GROWS GARDENIAS for cut flowers and likes them very much. They require very careful watering in summer and a little bottom heat in winter to help them bear their finest blossoms. But everybody doesn't appreciate the fragrant gardenia, and many who would like it in

its purest whiteness regard it as past as soon as it assumes its creamy hue. Gentlemen like it for button-hole bouquets on account of its whiteness and sweetness and the glossy green leaves the snowy blossoms nestle among.

CARNATIONS.—I was particularly well pleased with Mr. Grant's scarlet carnations. I never saw thriftier plants or ones with more flower buds. He calls the variety Lady Emma. So far as the flowers are concerned it doesn't look much unlike Portia, but the plants are bigger and bushier, and the flower stems longer and leafier. Anna Webb is doing famously. It is in lusty vigor and the flowers are large, full, of fine form and the perfection of a crimson carnation. Crimson King has got to go, it is losing in constitution and its blossoms lack fullness and substance. Hinze's White is preferred in its class for size and fullness of blossom, fine form and lasting both before and after being cut. Rosalind is of a beautiful pink color and the flowers are full, of good form, long but rather weak stemmed, and the plants tall. Columbia is largely grown and well liked. Its flowers are large, yellow and reddish streaked, of fine form and produced very freely. This variety behaves very well with me too. I had it from John Thorpe some years ago, and with it another variety of the same style, but with darker flowers and called "Buff seedling." This is also a fine variety. Has it been named?

Forcing Lily of the Valley.

I think our experience in blooming lily of the valley may be of benefit to others as it has been to us. Before attempting to force any we of course read, or at least attempted to read, all the FLORIST has had to say on the subject. We arranged a bench with moss, good bottom heat, cotton cloth covering etc., and our crop of flowers was merely fair. As we had more pips to start than would go into the prepared bed at one planting we put the balance into a couple of shallow boxes, covered with a light mulching of moss and set under a bench in a warm house, setting the boxes on the pipes and gave no further care other than watering. To our surprise these came far better than the others.

We now grow all our valley in this simple way. The boxes can be had from any grocer at five cents each and they will hold 100 pips. The saving in bench room is considerable. There has been no valley grown in this city finer than ours which has been forced in this simple way.

A Place for Everything.

Some time ago while visiting a florist in a neighboring town I was very forcibly impressed with the necessity of "having a place for everything and keeping everything in its place." Going through the houses it happened that in order to get something I wanted, a trowel was needed; my friend called to an assistant to fetch it, but the young man didn't know where to look for it and referred the matter to assistant No. 2, who declared that he hadn't "seen it since the carnations were planted," and so finally a piece of stick was made to do duty for the trowel. Wrapping paper and string were next called for, but although my friend declared that there was an abundant supply of both "round somewhere," neither could be found. One of the hands did

subsequently find a pile of wrapping paper under one of the benches, but so saturated with "dampness," from the watering can as to be quite useless for immediate service. A piece of sacking was therefore substituted for the paper and a garden line cut to supply the string.

Such an order of things is not only a source of unpleasantness and inconvenience at times, but also of considerable loss in the course of a year and is a decided reflection on the management. On the occasion referred to the boss had a good deal to say about the carelessness of his men, but I consider that he himself was most to blame and I told him so. Men generally conform to the usages of the place in which they are employed, and if the manager, or head of a concern does not rigidly enforce order and regularity it is a little inconsistent to expect employees to be systematic or careful.

Baltimore.

A. W. M.

Long Island Notes.

BY WM. FALCONER.

LOUIS SIEBRECHT has been sick with rheumatism, but is now up and out again.

JANUARY 18.—He had a team of horses plowing in the field. The most open winter we ever remember.

HIS CARNATIONS.—He has a good word for Silver Spray and has a bench of it in fine flowering condition, as well as a big patch of cuttings striking. Black Knight hasn't behaved very well till now. But although he has no blooming plants of Anna Webb, his cutting benches show a big effort in favor of this fine crimson variety. Columbia hasn't given him very much satisfaction. Now, it has behaved splendidly with me.

OF DOUBLE-FLOWED CALLA BLOSSOMS he had two the morning I was there. They are odd but not beautiful.

IN HIS SMILAX house he had just put up a long raised bench bed and planted gladioluses in it.

ORNITHOGALUM ARABICUM is studded all along the pathways on his carnation benches as he used to have them, and he has used the bulbs he forced last year. He was satisfied with them last year, when they brought 75 cents to \$1 a doz.

VIOLETS.—He used to be champion grower in this neighborhood, but a year or two ago the disease struck his plants and he gave up growing violets altogether. But his neighbor, Julius Scharff, has such a fine, clean lot that Mr. Siebrecht is going to try them again.

THE CHINESE NARCISSUS.—He is growing a multitude of this; batches are past, batches in bloom and batches in the cold shed. And they have grown well and bloomed well, but there is no demand for them. The cry is for paper whites and not for Chinese, which are white with yellow cup. He grows them in pots as he would any other narcissus.

C. H. ALLEN & Co., the bulb growers, formerly of Garden City, but for the past few years of Jamesport, L. I., have leased 30 acres of land at East Hinsdale (next station to Queens) and are to move their business here as soon as the buildings are erected to receive them. Dwelling house, barns, store houses and tenement houses are now being hurriedly put up. And then the two great bulb growing farms of Hallock and Allen will run most side by side.

ANYTHING NEW? Is about the first question I ask when I drop in to see John

Childs. This is because he has got "something new" on the brain.

HIS JUBILEE PHLOXES aren't bad. I saw them growing all last summer. They are a good, compact strain of Phlox Drummondii grandiflora.

I CANNOT find a whit of difference between his Golden Wave coreopsis and my own old strain of C. Drummondii. Coreopsis tinctoria in its various colors and sizes has shown double flowers for some years past, but I think the single ones are the prettier ones.

HE HASN'T floored us yet with the summer poinsettia (Euphorbia heterophylla), but this is because he couldn't get up stock enough of it. Just wait a while.

THE GIANT GHOST FLOWER is a terrible name to give to Datura arborea, far better use the old lady's name of Angel's Trumpet. But it is one of the best selling plants he handles.

CARDAMON PLANT.—Starting in boxes of soil under the benches were a lot of canna or ginger-like roots with a pleasantly aromatic taste and smell. "They are Elettaria Cardamomum," said Mr. Miller, "and we are sending it out this year." It is a native of the East Indies and grows abundantly on the Malabar coast. The flowers are small and white. The seeds contain an aromatic oil and mucilage and are used in medicine.

LEAF MOLD BY THE POUND.—"Yes, we mix a little bone dust with it and put it up in one to five pound packages and send it by mail or express. And it sells well."

STREPTOSOLEN JAMESONI.—What's the matter with it? He can't sell it; the people don't want it. He merely keeps it in stock and includes it as "extras" in orders. Now, I have this plant in the most gorgeous condition just now; even the one year old plants are weighted down with ponderous bunches of gold and orange.

A YELLOW IPOMEEA.—"This is the yellow ipomoea," said Mr. Miller, "and there's nothing pale or washy about the color either; it is a right good bright yellow." What species? "Don't know." Nicholson mentions two yellow-flowered species, namely, I. chryseides and I. dasysperma. The leaves of Child's plant are after the form of those of chryseides.

IS THIS HIBISCUS MARMORATUS?—A stout woody shrub, wooly pubescent throughout, young wood, foliage and pedicels, and large abutilon-like flowers of a pink-purple color freely and decidedly streaked with white. It is a very striking flower. Childs has it in bloom now and is exultant over it, but much concerned on one point. "How on earth can I get up stock enough of it to catalogue it?" Years ago, I believe, I had this same plant, raised from seeds collected in Mexico and given to me by that eminent naturalist Dr. Edward Palmer.

ITALIAN NAMES.—"These are a lot of bulbs we had from Italy, what do you think of their names?" Don't ask me, I've been in the soup myself. When will the folks in Europe learn that the people in America are not plumed Indians who do not know beans from brose?

PRIMROSES.—Henry S. Rupp & Sons, Shiremanstown, Pa., send us a box of specimen primrose blooms of good size and attractive shades. Owing to the fragility of these flowers they were not in best condition when received.

Overhead Heating.

Seeing recently several articles in the FLORIST on overhead heating prompts me to give my experience with that mode of radiation. In the spring and summer of 1887 I built three new greenhouses, each 110 feet long, two 20 feet and one 10 feet wide. The houses lay north and south with workshop and office running across the north end with boiler house on east end of shop extending past houses. The boiler used is a 10 horse power of the railroad pattern. The houses were piped in the usual way, using 2½-inch pipe for feed and 1½-inch for all the balance, running the pipes all under the benches. In due time the west 20-foot house was planted to roses, the 10-foot on east side to carnations and the middle house filled with mixed stock.

The planting and care of the houses was left to my man in charge for the next few months until circumstances made it necessary for me to take charge of the houses myself, which I did on Christmas morning of '87. I soon found that there was some defect in the heating arrangements that rendered it unsatisfactory, at least it was not working to produce the best results. During the winter I made several changes in the pipes, some of which were improvements, but still it did not come up to my idea of what steam heating should be.
